

REPORT OF THE 329th CELL EXCHANGE

NOVEMBER 14, 2007

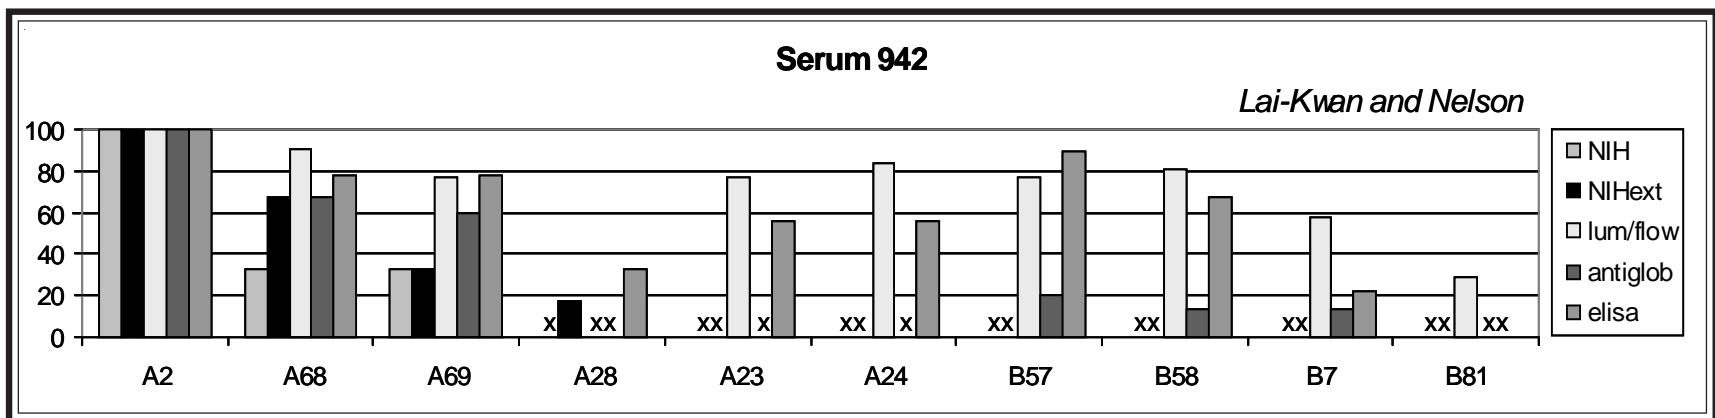

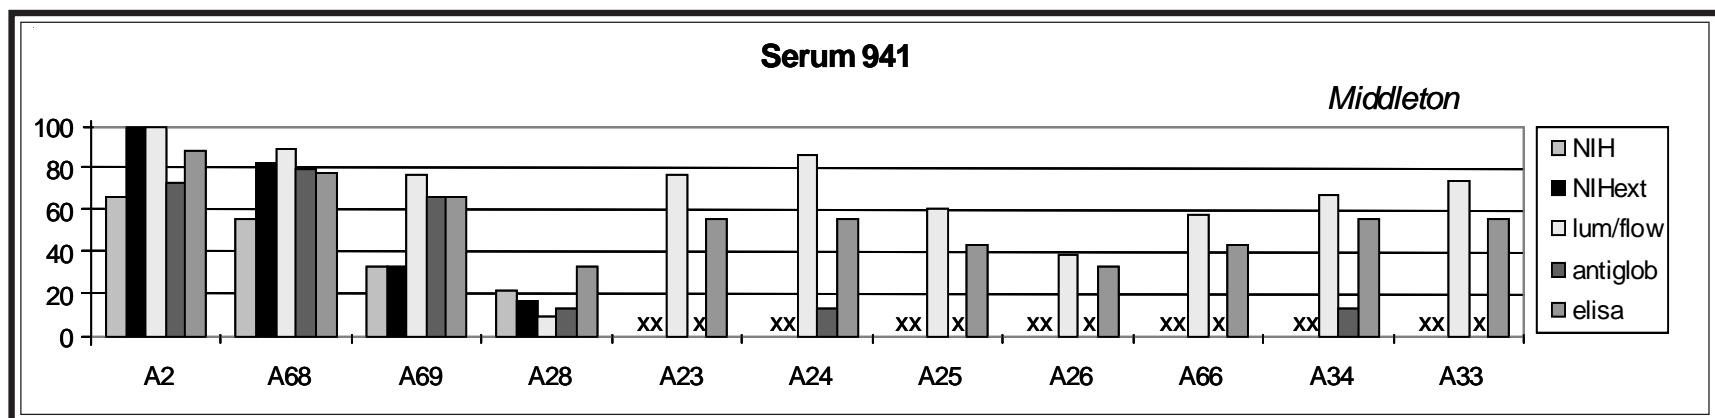

Serum	941-944
DNA Extract	401-404
Cells	1313-1316

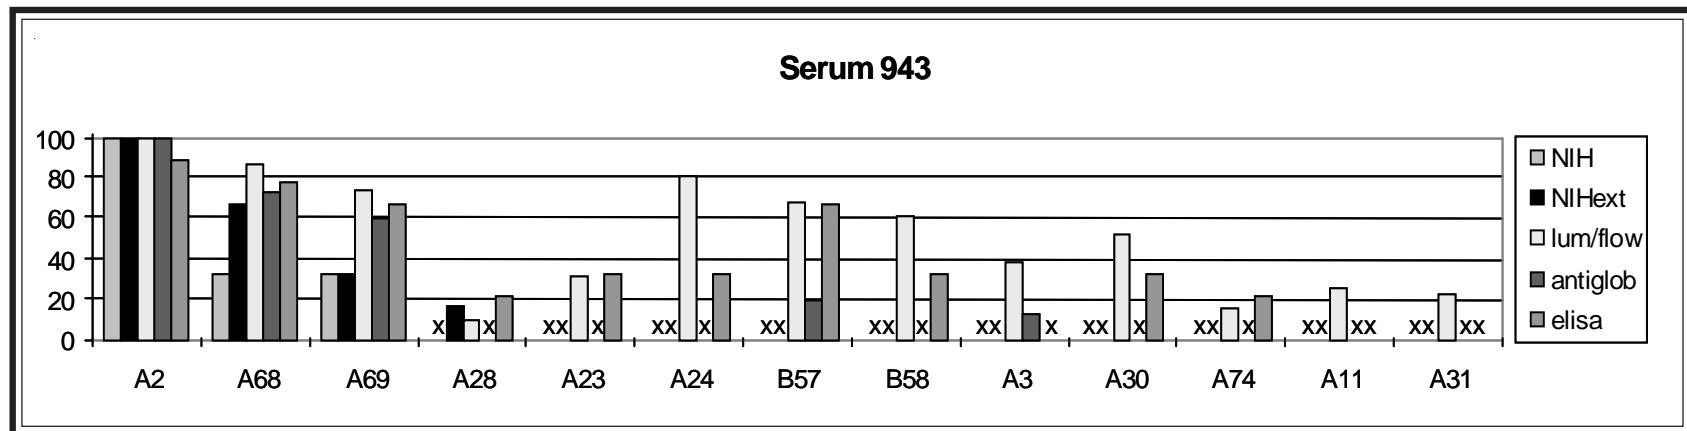

Serum Exchange

We wish to acknowledge the generous collaboration of **Derek Middleton, Northern Ireland Histocompatibility and Immunogenetics Laboratory, City Hospital, Belfast**, and **Pauline Lai-Kwan and Kathie Nelson, BloodSource, Sacramento**,

Sacramento, in offering interesting sera for our exchange studies.

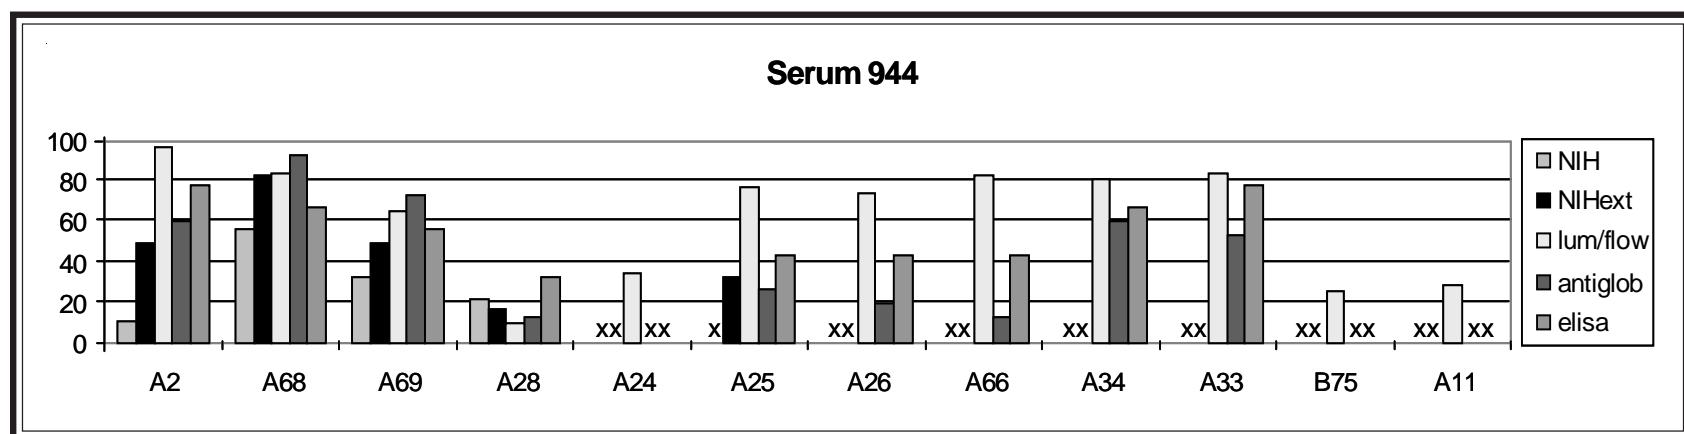

This month's study featured 4 allosera (**sera 941-944**) strongly reactive to A2 and A28 (A68, A69).

All 4 sera were determined to be positive to A2, A68, and A69 by all methods. Labs using NIH detected weaker anti-A2 reactivity for serum 944

in comparison to the strong anti-A2 reactivity levels of the other 3 sera. Labs using antiglobulin reporting additional anti-A10 and -A33 for serum 944.

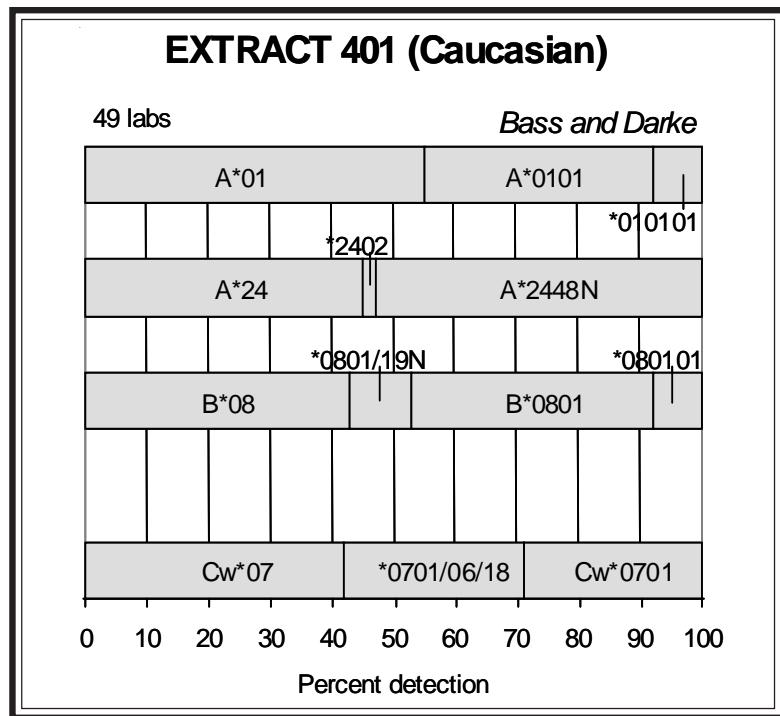

For all 4 sera, results from labs using the more sensitive methods of Luminex, flow, and ELISA indicated reactivity to secondary clusters of antigens in addition to A2 and A28, as indicated by the following:

	A2	A28	A9	A10	A33	B17
941	+	+	+	+	+	
942	+	+	+			+
943	+	+	+			+
944	+	+		+	+	

Extract Exchange

We wish to express our appreciation to **Helen Bass and Christopher Darke, Welsh Blood Service, Pontyclun; Doug Smith, Baylor University Medical Center, Dallas; and Eric Mickelson and John Hansen, Fred Hutchinson Cancer Research Center, Seattle**, for their generous donations of unusual cells.

The month's study offered labs the hands-on opportunity to type reference cells with selected A*24 alleles, including A*2421, A*2433, and A*2448N. A*2421 and A*2448N were typed for the first time in the Cell Exchange. Other interesting alleles, including B*3541 and B*5106, were also examined.

Extract 401. This cell from a Caucasian donor was 43623, the reference cell for A*2448N, as correctly identified by Brown, Chen, and McIntyre.

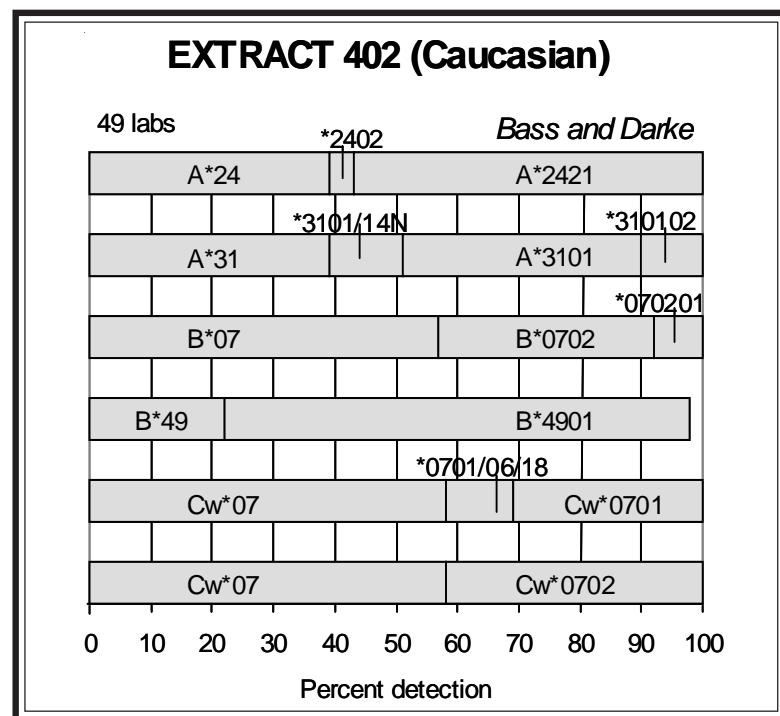

A*2448N (53%) was reported by over half of the labs.

The other A-locus allele was A*0101 (45%).

B*0801 was the sole B-locus allele, as detected by 47%.

Cw*0701 was reported by 29%, with another 29% assigning Cw*0701/06/18.

Extract 402. This Caucasian cell was 37057, a reference for A*2421, as noted by Brown, Moses and Dunckley, and McIntyre. A*2421 was first

described in Korean individuals by Lee and Cho (1), "The new sequence is similar to A*2402101, differing at codon 127 (AAA -> AAC; K -> N)."

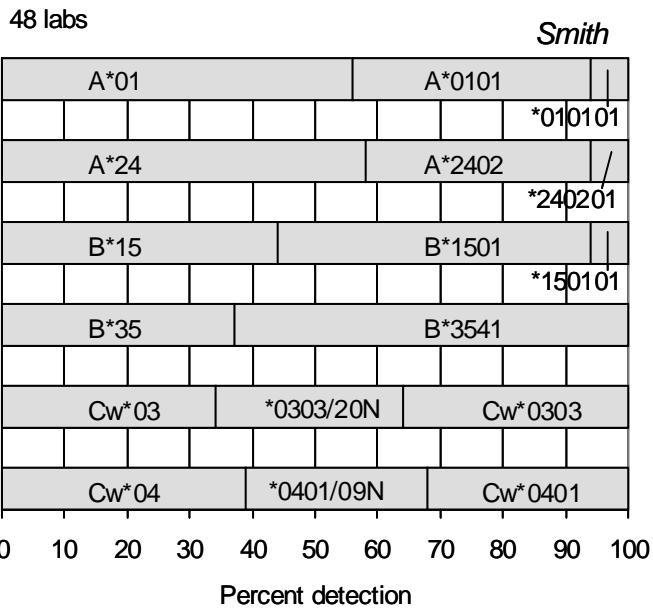

A*2421 was assigned by 57% of the labs.

The second A-locus type was A*3101 (49%).

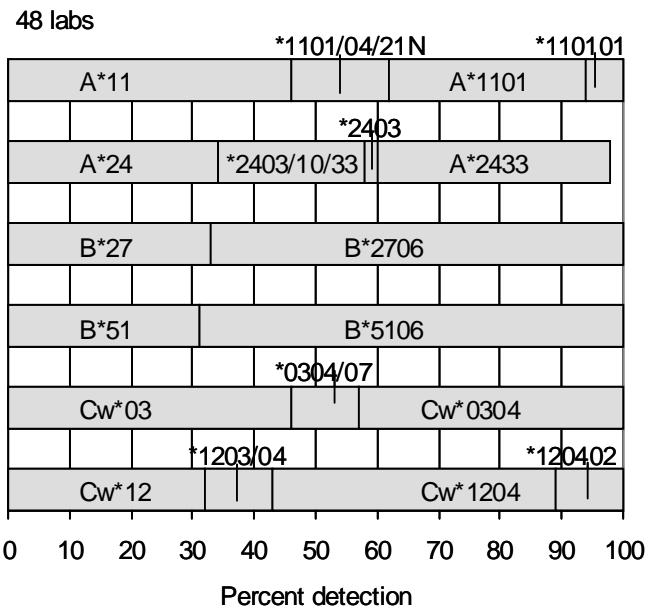

The B-locus alleles were B*0702 (43%) and B*4901 (76%).

The C-locus types were Cw*0701 (31%) and Cw*0702 (42%). Two commonly found associations, B*0702-Cw*0702 and B*4901-Cw*0701, were likely present in this cell.

EXTRACT 403 (Caucasian)

EXTRACT 404 (Filipino)

Extract 403. The rare B*3541 was present in this cell from a Caucasian individual. This was the third B*3541 cell typed in the Cell Exchange. The previous B*3541 cells were extracts 337 (Cauc) and 390.

B*3541 was reported by 63%.

The second B-locus allele was B*1501 (56%).

A*0101 (44%) and A*2402 (42%) were detected in this cell. This cell with the common A*2402 may be used as a quality control standard in reference to the other A*24 variants in this study.

Cw*0303 (36%) and Cw*0401 (32%) were the C-locus types. B*1501-Cw*0303 and B*3541-Cw*0401 were the probable associations.

Extract 404. This cell from a Filipino donor was 17933/00, one of the reference A*2433 cells, as correctly identified by Chen and McIntyre. It was also typed

in recent international workshops as IHW#9434. The class I type matched that of cell 1134 (2002); however, this present cell was not from the same donor.

A*2433 was detected by 38%, with another 24% reporting A*2403/10/33. Over 60% of the labs assigned B*2706 (67%) and B*5106 (69%).

The C-locus alleles were Cw*0304 (43%) and Cw*1204 (57%), with 11% assigning Cw*120402.

The probable haplotypes in this cell were A*1101-B*2706-Cw*0304 and A*2433-B*5106-Cw*120402. A*1101-B*2706-Cw*0304 was previously found in extract 36 (Filip) and cells 1134 (Filip) and 1217 (Chin). All previous A*2433 exchange cells (extracts 217, 255, 266, 267, 304; cells 1134, 1278) were found in association with B*5106 and Cw*120402.

Cell Exchange

Cell 1313. It was apparent that a variant of A24 was present in this cell from a Chinese donor. Danilovs, Holdsworth, Kopko, Lebeck, Pidwell, and Pollack commented that the anti-A24 reactivity was shorter than normal. A2403 was reported by 29%; overall, A24 was assigned by 96%. The presence of A*2403 (49%) was confirmed by half of the labs.

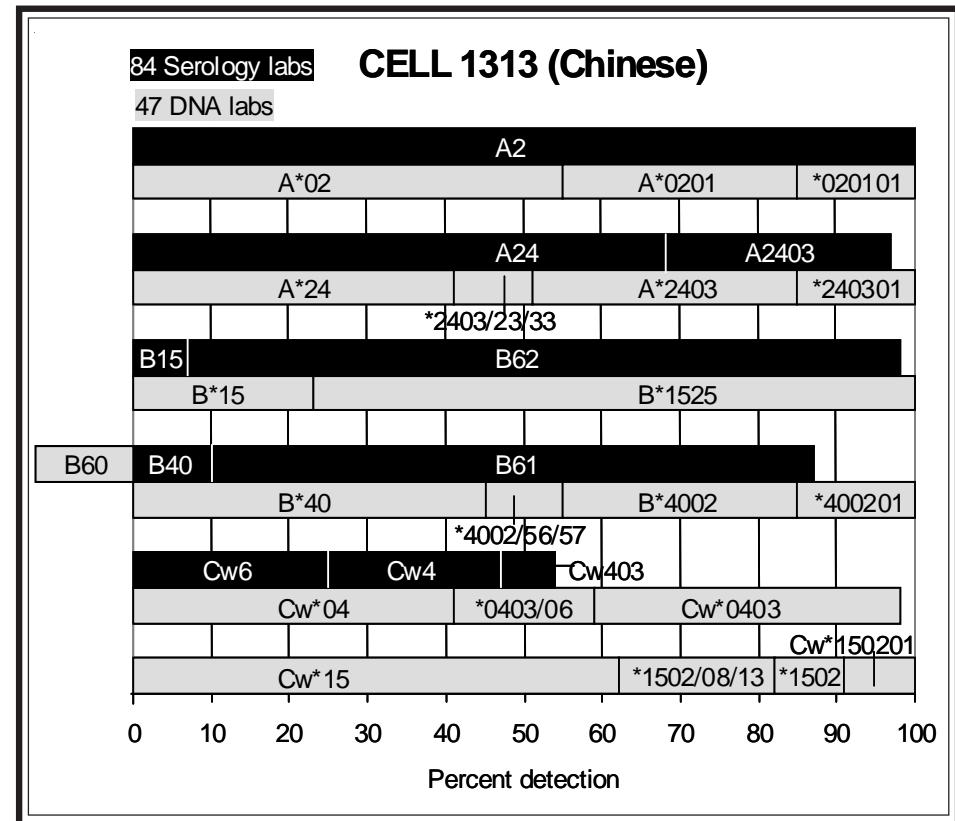

B62 was detected by 91%. Abbal, Holdsworth, Kopko, and McCluskey noted varied anti-B62 and -B75 reactivity. The majority of the labs assigned B*1525 (77%). B*1525 was previously typed in cells 861 (Asian), 954 (Chin), 1285 (Asian), and 1286 (Filp).

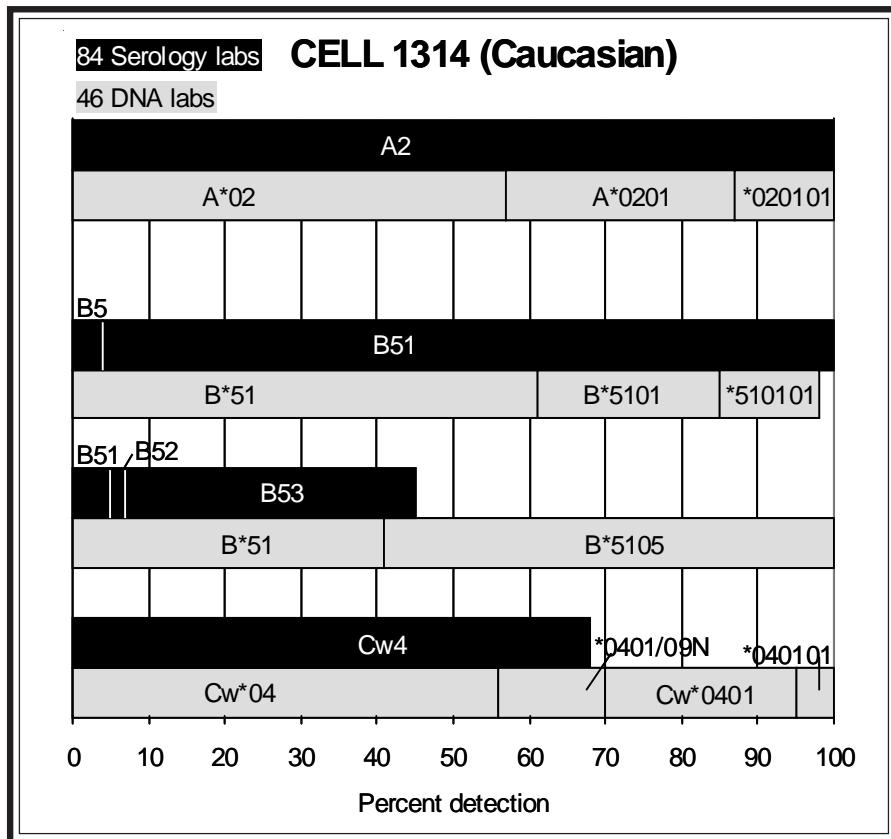

B61 (77%) was the second B-locus antigen, confirmed as B*4002 (45%). B60 was misassigned by 13%.

The reporting of Cw4 (21%) and Cw6 (25%) were indicative of the presence of the C-locus variant encoded by Cw*0403 (39%).

Cw*15 was the second C-locus allele; Cw*1502 was assigned by 18%.

The probable associations were B*1525-Cw*0403 and B*4002-Cw*1502. Both associations are commonly found in Asian donors.

Cell 1314. B51 (96%) was well typed in this Caucasian cell. A number of labs indicated that a second B-locus antigen related to B53 (38%) and B51 (5%) was also present, but definitive assignment was muddled by the presence of the standard B51, as commented by Anthony Nolan Trust, Kopko, Lefor, and Steinberg. Molecular-based typing results revealed two different B*51 subtypes, B*5101 (37%) and the rare B*5105 (59%). This was the second B*5105 cell typed by both serologic and DNA methods in the Cell Exchange, the first one being cell 1109 (2002), also from a Caucasian donor. The serologic typing results for cell 1109 indicated inconsistent anti-B51 and -B53 reactivity, that is, B51 (45%), B53 (33%), and B*5102 (12%). B*5105 was also typed in another exchange cell, extract 340 in 2005. The NMDP dataset in the 2004 HLA Dictionary listed the following assigned types for 25 B*5105 cells: B51 (48%), B53 (24%), and B52 (16%) (2).

Cw4 (68%) was confirmed as Cw*0401 (30%) as the sole C-locus type.

The associations in this cell may be B*5101-Cw*0401 and B*5105-Cw*0401. B*5105-Cw*0401 was found in both previous B*5105 cells, cell 1109 and extract 340.

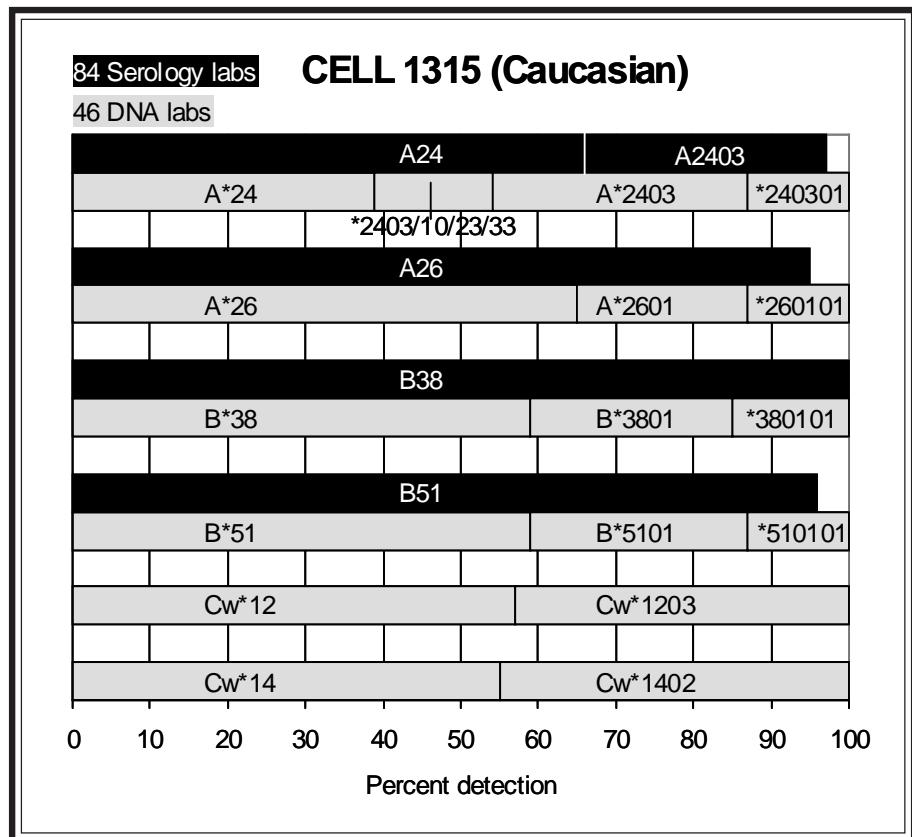

Cell 1315. A2403, as assigned by 31%, was present in this Caucasian donor. Overall, A24 was assigned by 98%. Several labs, including Danilovs, Kopko, McCluskey, and Pollack, noted a short A24. The A24 variant was confirmed as A*2403 by 46%.

A26 (95%) was well typed and verified as A*2601 by 35%.

B38 (100%) and B51 (96%) were corroborated as B*3801 (41%) and B*5101 (41%), respectively.

Cw*1203 (43%) and Cw*1402 (45%) were the C-locus types.

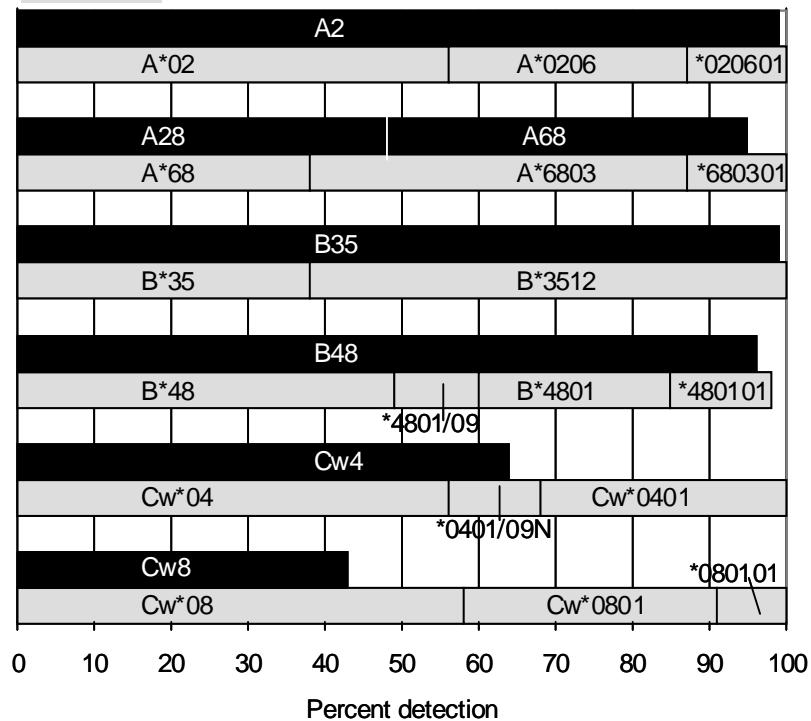

The probable haplotypes in this cell were A*2403-B*5101-Cw*1402 and A*2601-B*3801-Cw*1203. A*2601-B*3801-Cw*1203 was determined to be a frequently found haplotype in U.S. Caucasians, with HF=0.0170 (3).

83 Serology labs

CELL 1316 (Hispanic)

45 DNA labs

Cell 1316. This Hispanic cell was well typed as A2, A28 (A68), B35, B48, Cw4, Cw8 and A*0206, A*6803, B*3512, B*4801, Cw*0401, Cw*0801.

A*0201-B*3512-Cw*0401 and A*6803-B*4801-Cw*0801 were the probable haplotypes. A*0201-B*3512-Cw*0401 was listed as the fourth most frequent A-B-C haplotype in U.S. Hispanics, with HF=0.0107 (3). B*4801-Cw*0801 is a commonly found association.
