

REPORT OF THE 345th CELL EXCHANGE

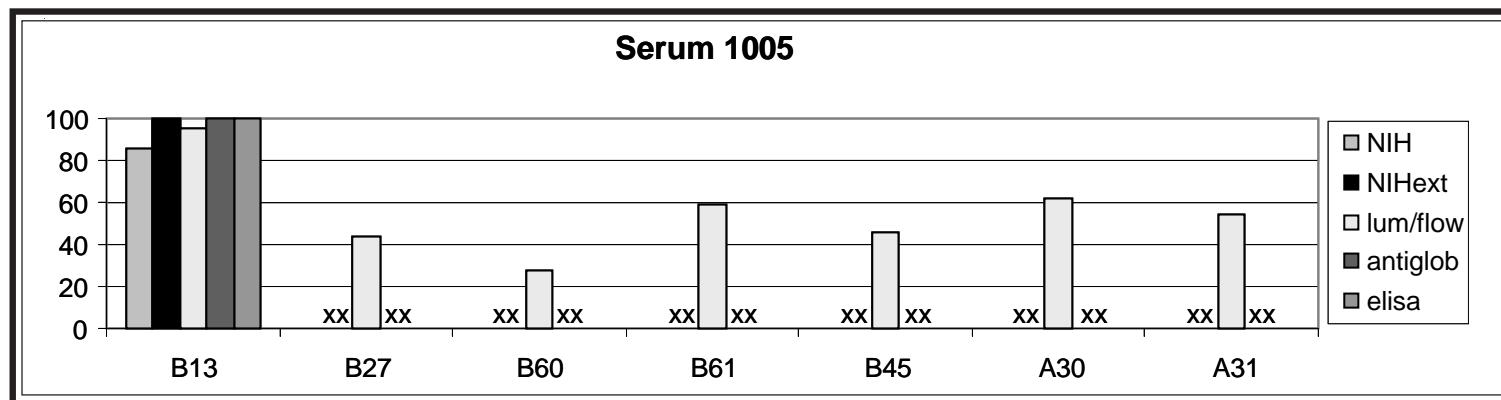

NOVEMBER 10, 2009

Serum	1005-1008
DNA Extract	465-468
Cells	1377-1380

Serum Exchange

This month's antibody study (**sera 1005-1008**) included 4 allosera strongly reactive to B13 by all methods. All 4 samples reacted as operationally

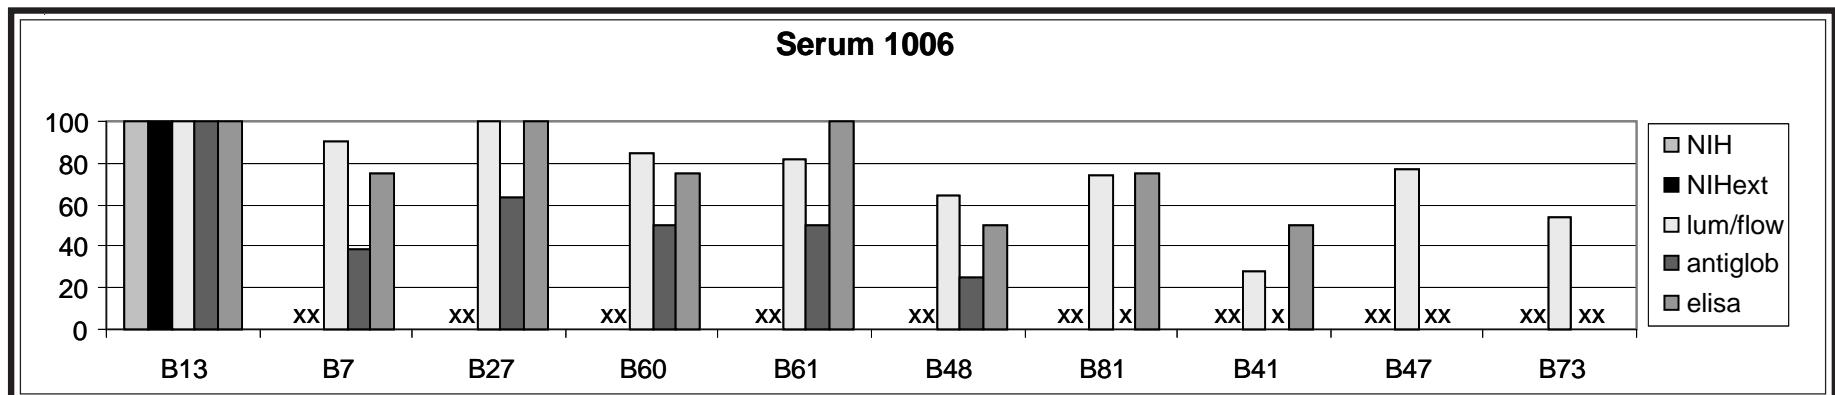

"monospecific" anti-B13 sera by NIH. Additional reactivity to other specificities were detected by labs using more sensitive techniques.

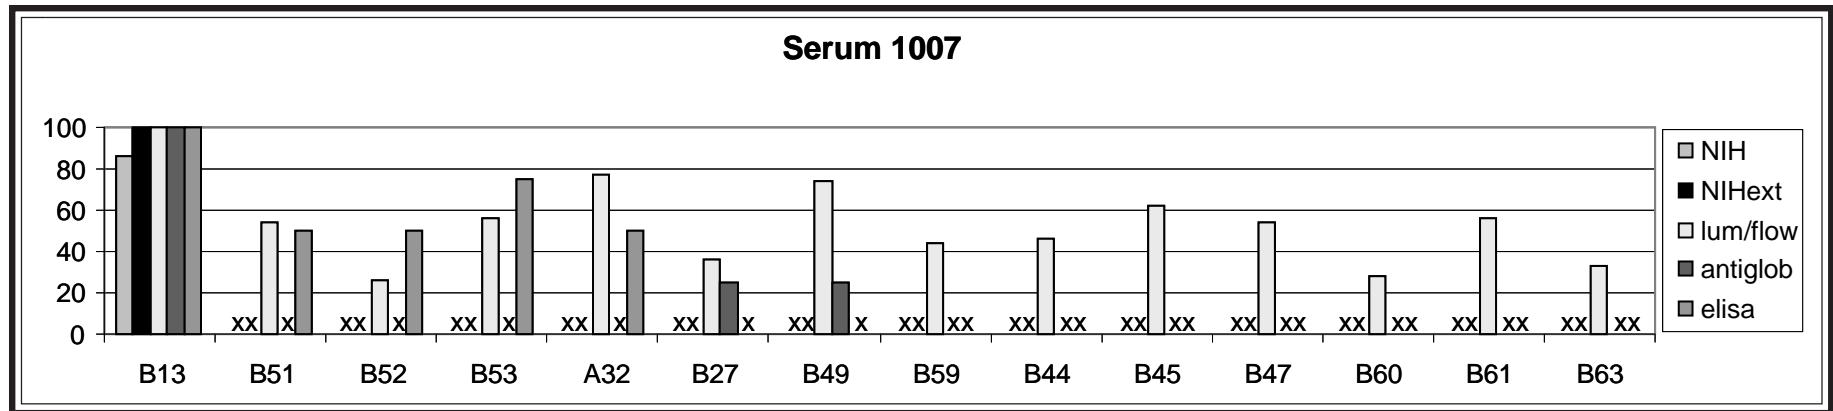

The results for **serum 1005** indicated that this sample was monospecific to B13 by all methods, except by Luminex and flow. Luminex and flow labs detected weaker reactivity to other B-locus specificities, including B27, B45, B60, and B61, as well as to A30 and A31. The reporting of the A-locus

specificities may be due to strong linkage disequilibrium with B13, in particular, A*3001-B*1302 cells. A30 and A31 were also reported for serum 951 (2007), another sample found to be strongly positive to B13.

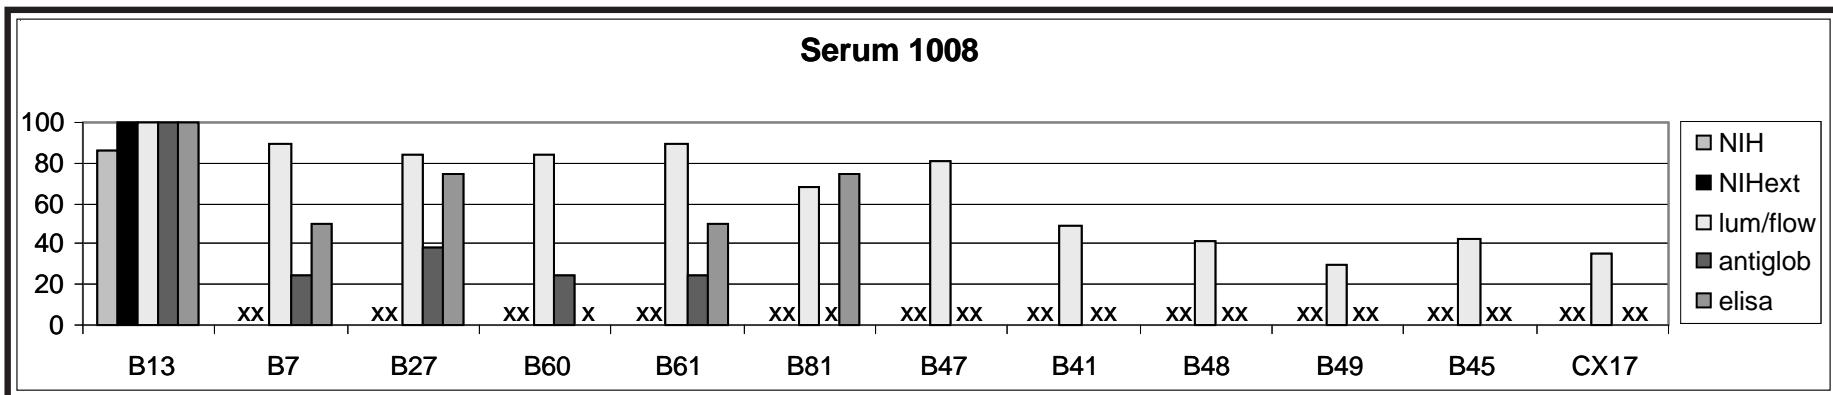

Sera 1006 and 1008 were similar in their reactivity patterns, that is, labs

using Luminex, flow, antiglobulin, and ELISA reported additional reactivity to B7, B27, B60, and B61. Varied levels of reactivity were also reported for other B-locus specificities, including B41, B45, B47, B48, B73, and B81. Their reactivity matched closely to the reactivity pattern of serum 952 (2007).

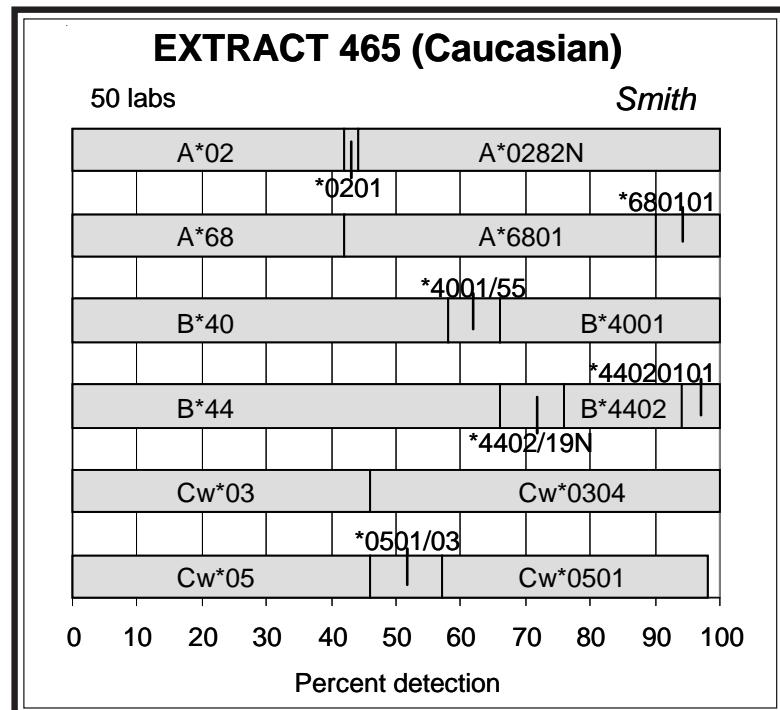

Luminex, flow, and ELISA results for **serum 1007** indicated additional reactivity to B51, B52, and B53, as well as to A32. Luminex and flow labs also reported reactivity to other B-locus specificities, including B44, B45, B47, B49, B59, B60, and B61.

Extract Exchange

We appreciate the generous collaboration of **Doug Smith**, University of Michigan Medical School, Ann Arbor, and **Eric Mickelson and John**

Hansen, Fred Hutchinson Cancer Research Center, Seattle, in providing invaluable reference cells to study in the Cell Exchange.

Extract 465. This cell from a Caucasian individual was TER-313, one of the reference cells for A*0282N. This donor was previously typed as extract 313, as correctly identified by Barnardo, Brown, and Duncley. A parent was also typed as extract 314 in the 2005 family study examining the novel null A-locus allele. Extract 314, known as TER-314, also serves as an A*0282N reference cell.

In the initial 2005 typing, 14 of 17 laboratories performing SBT typing detected the new A*02 null allele in both extracts 313 and 314. The novel sequence was identical to A*020101 with one substitution (A->C) at position 564 (AY974249), replacing cysteine, and creating a premature stop codon, as described by Smith et al. (1):

	160	170
A*01010101	HAAEQRRVYL EGR	CVDGLRR
A*02010101	-V---L-A---	--T---EW---
A*02010102L	-V---L-A---	--T---EW---
A*02010103	-V---L-A---	--T---EW---
A*0282N	-V---L-A---	--TX

A*0201 was reported by 22% and 17% for extracts 313 and 314, respectively. Later in the same year, May 2005, this new null allele was formally designated A*0282N.

In this present retyping, over half of the labs assigned A*0282N (56%). A*6801 (58%) was the second A-locus type.

From family studies, A*0282N was determined to be on the same haplotype with B*4402 and Cw*0501. The second haplotype in this cell was A*6801-B*4001-Cw*0304.

EXTRACT 466

Extract 466. This donor of unknown ethnicity was TER317, a reference cell for the unusual DRB1*0315, and was also typed in the workshops as IHW#9381. The cell was previously typed in the Cell Exchange for class II as TER-317 (2003) and again, as TER-391 (2007).

B*3908 was reported by 66%.

B*1801 (18%) was the second B-locus allele, with B*1801/17N reported by 30%.

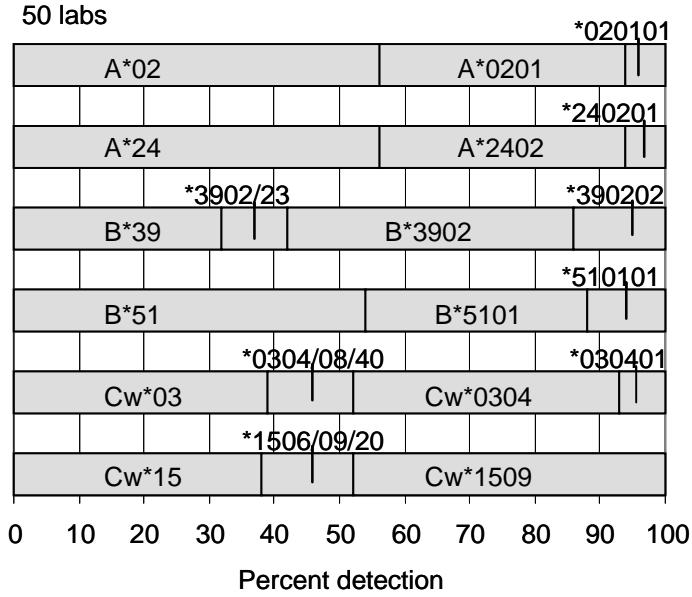

The C-locus types were Cw*0501 (34%) and Cw*0702 (24%).

The probable associations were B*1801-Cw*0501 and B*3908-Cw*0702. Three of 4 previous B*3908 exchange donors (cells 912, 1206, 1367) were found in association with Cw*0702 and the fourth B*3908 cell, cell 1380 (data in this present report), was found associated with Cw*0717.

Although no ethnicity was provided for this donor, it may be likely that this donor was Hispanic. All previous B*3908 donors typed in the Cell Exchange were Hispanic.

The class II typing for this donor was DRB1*0315, DRB1*0407, DRB3*0202, DRB4*0103, DQB1*0201, DQB1*0302, DQA1*0301, DQA1*0501, DPB1*0202, DPB1*0402.

EXTRACT 467 (Hispanic)

Extract 467. This Hispanic cell was previously typed as cell 1205 (2004), as noted by Barnardo, Brown, and Dunckley.

When this donor was initially examined in 2004, it was the first time that the rare Cw*1509 (38%) was typed in the Cell Exchange. In this present retying, Cw*1509 was reported by 48%. This cell remains the sole Cw*1509 typed in the Exchange.

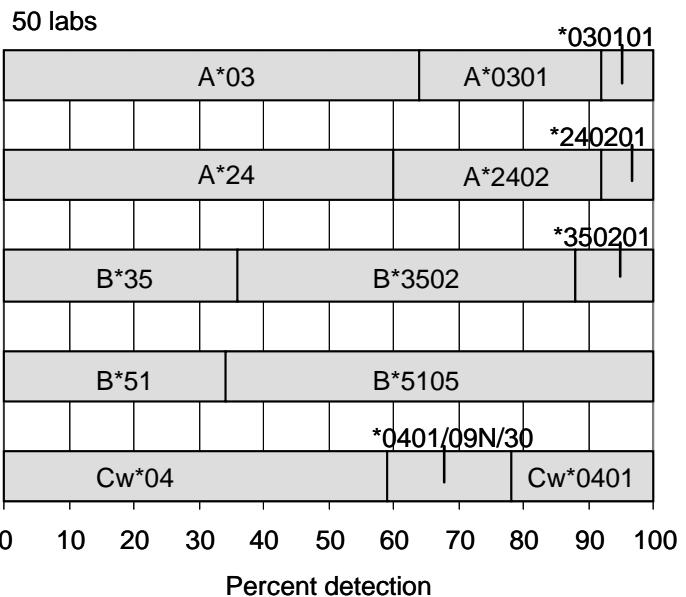

B*3902 was detected by 58%, with 14% assigning B*390202, which is more commonly found than B*390201.

B*5101 (46%) was the second B-locus type.

The probable associations were B*3902-Cw*0304 and B*5101-Cw*1509. Other B*3902 cells (extract 354, cells 1263 and 1273), all from Hispanic donors, were found in association with Cw*0702. Haplotype frequency data from the NMDP web site, <http://bioinformatics.nmdp.org>, indicated that Cw*1509 was found, in descending order, with B*5101g, B*3501g, B*5114, and B*3701, in Hispanic populations.

The high-resolution typing of this donor was A*0201, A*2402, B*5101, B*390202, Cw*0304, Cw*1509.

EXTRACT 468

Extract 468. This cell was previously typed as extract 340 (2005), as correctly identified by Barnardo. The rare B*5105 was detected by 58% in the 2005 typing. Other B*5105 exchange donors, typed by both serology and DNA, were cells 1109 and 1326 (also cell 1314), both from Caucasian donors.

In this present retying, B*5105 was reported by 66%.

The second B-locus allele, B*3502 (64%), was well typed.

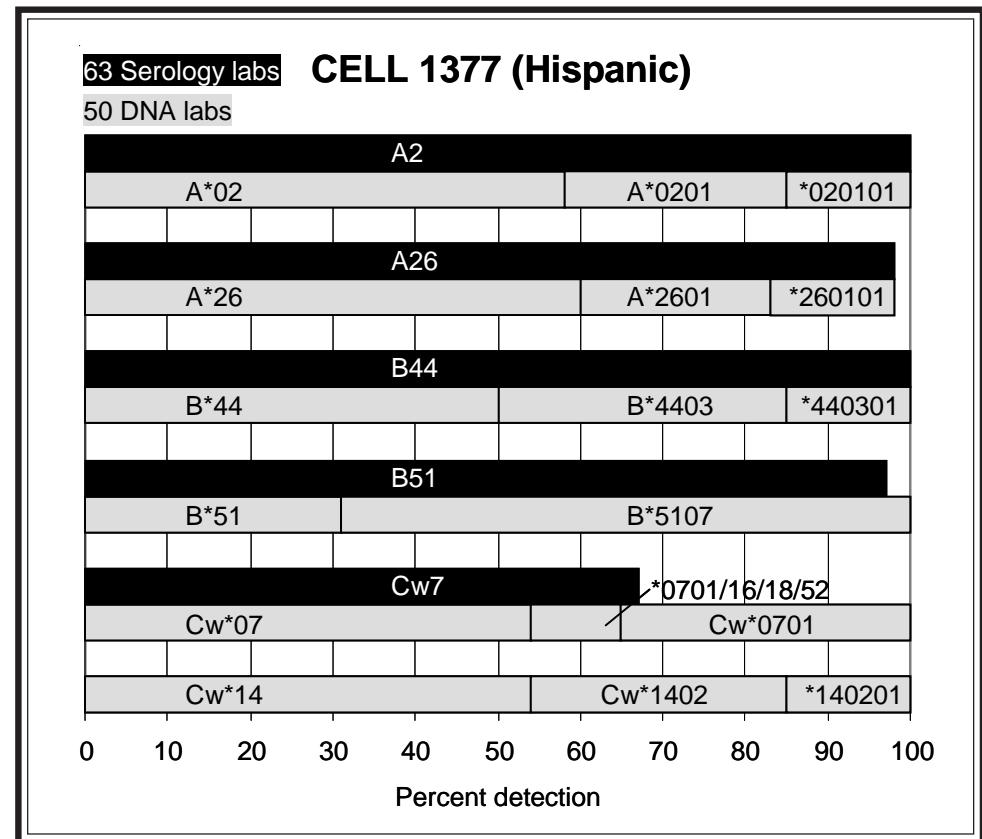

The sole C-locus type was Cw*0401 (22%). The B*5105-Cw*0401 association was also present in the previous B*5105 exchange cells.

The serologic results for cell 1109 indicated a short B51 reactivity, as only 53% assigned B51. For cell 1326, since B*5101 was also present besides B*5105, the serologic expression for the variant could not be clearly evaluated. Both cells 1109 and 1326 showed extra reactivity with anti-B53, -B5102, and -B52 sera. Data and comments presented in the HLA dictionary also indicated similar extra reactivity (2).

Cell Exchange

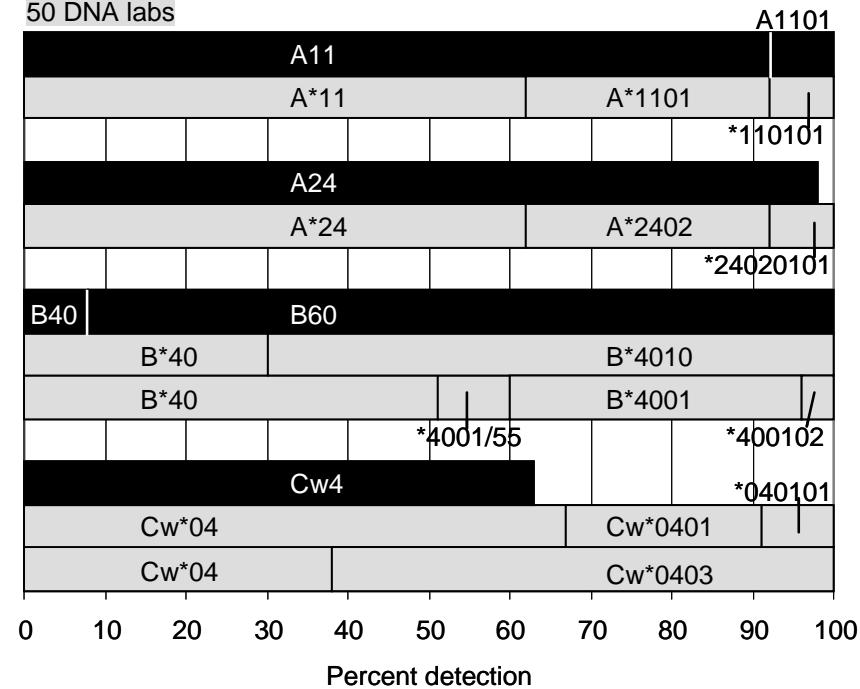

Cell 1377. B51 (97%) was well typed in this Hispanic cell. Askar and Pidwell commented that a variant was possible, observing that this cell was non-reactive with several B5, B78 reagents. B*5107 was assigned by 69%. B*5107 was previously detected by 61% in extract 442 from a Caucasian donor earlier this year. This was the first time that B5107 was typed by both serologic and DNA typing in the Cell Exchange.

This cell was well typed as A2, A26, B44, B51, Cw7 and A*0201, A*2601, B*4403, B*5107, Cw*0701, Cw*1402. The associations in this cell may be B*4403-Cw*0701 and B*5107-Cw*1402. B*5107-Cw*1402 was also present in extract 442.

62 Serology labs **CELL 1378 (Filipino)**

50 DNA labs

Cell 1378. B60 was assigned by 92% in this cell from a Filipino individual. A number of serology labs noted that a second B40 variant was likely present. DNA typing revealed 2 different B*40 subtypes, B*4001 (40%) and B*4010 (70%). B*400102 was assigned by Claas and Tilanus.

Cw4 was assigned by 63%. Two different C-locus alleles, Cw*0401 (33%) and Cw*0403 (62%), were reported.

Cw*0403 is found in strong disequilibrium linkage with B*4010, as observed in all previous B*4010 exchange cells 1165 (Filp), 1166 (Filp), 1183 (Filp), and 1282 (Hisp). The other association, B*4001-Cw*0401, was found in a number of exchange cells, including cells 1166, 1167, 1232, 1297, and 1362, all from Filipino donors.

Cell 1379. This Caucasian donor was previously typed as cell 1336 last year, as correctly identified by Barnardo, Dunckley, P.Dunn, Lopez-Cepero, Mah, and Walter Reed AMC.

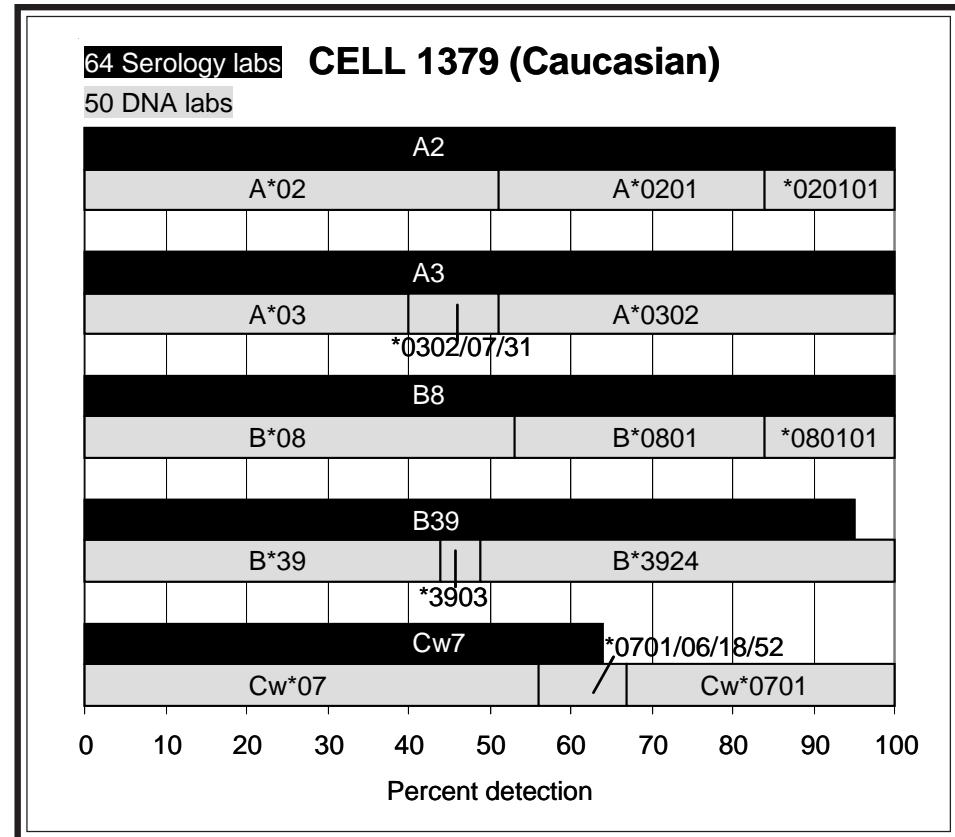

In this present retying, B39 was detected by 95%. Anthony Nolan Trust and Walter Reed AMC labs noted shorter than normal anti-B39 reactivity. B*3924 (51%) was assigned by half of the labs. B*3903 was misassigned by 2 labs. B*3924 is most homologous to B*3903, with one substitution (T->C), at position 365, resulting in an amino acid change at codon 98 (ATG->ACG), from methionine (M) to threonine (T). This same B*39 allele was recently typed in cell 1373 from an Hispanic donor.

B8 was detected by 100%, confirmed as B*0801 (47%).

A2 and A3 were assigned in complete consensus, verified by 49% as A*0201 and A*0302, respectively.

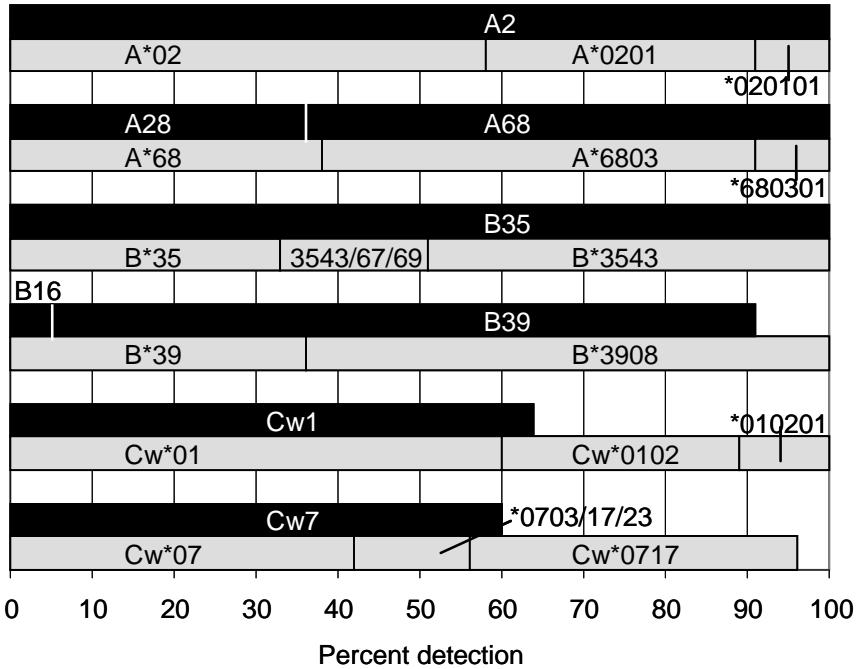

Cw7 (64%), corroborated as Cw*0701 (35%), was the sole C-locus type detected in this cell.

B*0801-Cw*0701 and B*3924-Cw*0701 were likely present in this cell. A*0201-B*3924-Cw*0701 was one probable haplotype in this cell, as well as in the previous B*3924 cell 1373. The other haplotype may be A*0302-B*0801-Cw*0701.

63 Serology labs **CELL 1380 (Hispanic)**

50 DNA labs

Cell 1380. B39 was reported by only 86% for this Hispanic cell. A number of labs (Abbal, Anthony Nolan Trust, Esteves-Kondo, Holdsworth, McCluskey, Askar and Pidwell, Walter Reed AMC) noted the presence of a short variant. This cell was previously typed as 1337 (2008), as commented by Barnardo, Dunckley, Lopez-Cepero, Mah, McAlack, and Walter Reed AMC. In that previous typing, B39 was detected by only 74%. B*3908 was reported by 64% in this present retying, similar to the 63% detection level last year. B*3908 was also studied in extract 466, described in this same report, as well as in previous cells 912, 1206, and 1367, all from Hispanic donors.

B35 was assigned in complete consensus, and verified as B*3543 (49%). Esteves-Kondo, Askar and Pidwell, and Walter Reed AMC commented that the B35 reactivity was unusual. B*3543 was also typed in cells 983 from a Caucasian donor and 1352 (also cell 1252, cell 1294, ext 356) from an Hispanic individual.

Cw1 (64%) and Cw7 (60%) were the C-locus antigens, confirmed as Cw*0102 (40%) and Cw*0717 (40%), respectively. Another 14% assigned Cw*0702/17/23. This donor is the sole Cw*0717 typed in the Cell Exchange.

A2 (100%) and A68 (64%) were verified as A*0201 and A*6803 (*680301), respectively.

The probable associations in this cell were B*3543-Cw*0102 and B*3908-Cw*0717. B*3543-Cw*0102 was present in the other two exchange B*3543 donors. B*3908-Cw*0702 was found in the other B*3908 exchange donors.
