

REPORT OF THE 358th CELL EXCHANGE

JUNE 8, 2011

B-cell line Exchange

B-cell Line	455-456
Serum	1053-1056
DNA Extract	517-520
Cells	1429-1432

We wish to express our gratitude to **Helen Bass, Jane Rowlands, and Tracey Rees, Welsh Blood Service, Pontyclun**, for their generous collaboration with their offers of reference cells to study in our exchanges.

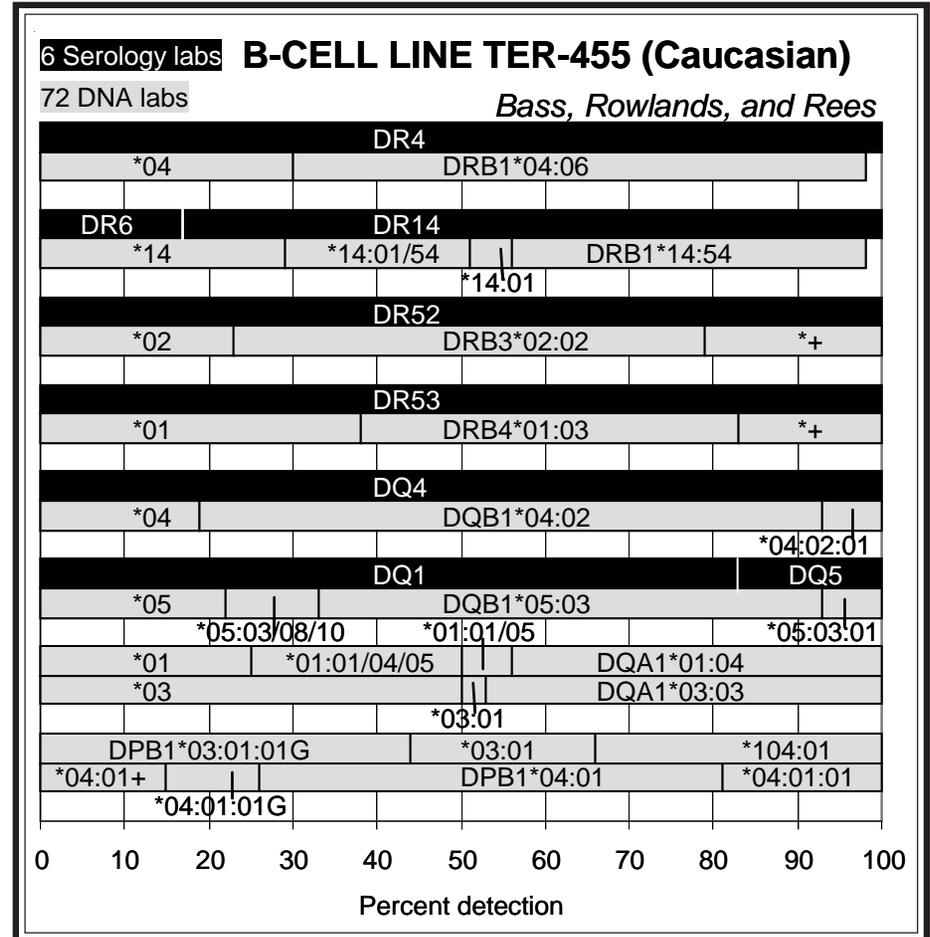

TER-455. This cell from a Caucasian donor was the reference B*50:02 cell, UBM13129406, as described by Darke et al. (1). It was typed for class I as extracts 185 (2001) and 352 (2006) and was recently typed for class II as TER-450, as correctly identified by Hahn, Lopez-Cepero, and Mah.

In this present retyping, DRB1*04:06 was assigned by 68%. Darke et al. described that the majority of their donors with B*50:02 haplotypes (n=11/15) were found to also have DQB1*04:06-DQB1*04:02 rather than the more commonly found DRB1*04-DQB1*03 association. The other 2 DRB1*04:06 cells typed in the Cell Exchange, TER-138 and TER-286 (Thai), were found to be in association with DQB1*0302.

DRB1*14:54 was reported by 42% and DRB1*14:01/54 was assigned by 18%. Two labs assigned DRB1*14:01P since DRB1*14:01 and DRB1*14:54 have identical protein sequences as encoded by exon 2. Another lab assigned DRB1*14:01:01G, since both DRB1*14 alleles have identical nucleotide sequences in exon 2. Four labs misassigned DRB1*14:01.

Combining the data from Darke et al. and the exchange results, the haplotypes in this cell were A*11:01/*24:02-B*50:02-C*06:02-DRB1*04:06-DRB4*01:03-DQB1*04:02-DQA1*03:03 and A*11:01/*24:02-B*55:01-C*03:03-DRB1*14:54-DRB3*02:02-DQB1*05:03-DQA1*01:04.

The previous typing did not resolve whether DPB1*03:01 or DPB1*104:01 was present. DPB1*104:01 was assigned by 36% and DPB1*03:01 by 24%. Another 40% did not differentiate among DPB1*03:01, DPB1*104:01, and DPB1*124:01; their sequences are identical in exon 2. This retyping indicated that DPB1*104:01 was assigned by 34% and DPB1*03:01 by 22%. A total of 44% did not resolve among DPB1*03:01, DPB1*104:01, and DPB1*124:01, which was therefore, denoted as DPB1*03:01:01G (refer to IMGT/HLA Ambiguous Allele Combinations, Release 3.4.0, at <http://www.ebi.ac.uk/imgt/hla/ambig.html>).

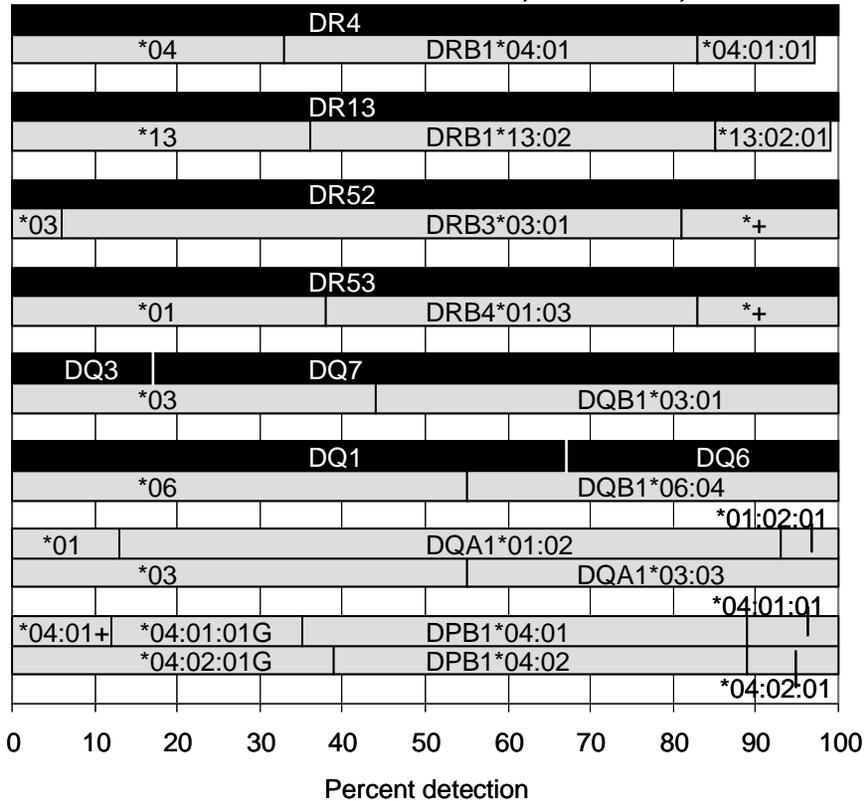

The other DPB1 allele was DPB1*04:01:01 (74%). DPB1*04:01:01G (11%) denotes that DPB1*04:01 was not resolved from DPB1*126:01. "DPB1*04:01+" included labs that assigned other alleles, including DPB1*120:01N and DPB1*128:01.

DPA1*01:03 was assigned by Charron and J.Lee.

6 Serology labs B-CELL LINE TER-456 (Caucasian)

72 DNA labs

Bass, Rowlands, and Rees

TER-456. This Caucasian cell was 29037, the reference cell for the rare B*49:03, described by Darke et al. (2). It has been typed twice in the Cell Exchange for class I, as extracts 189 (2001) and 298 (2004).

This cell was well typed as DRB1*04:01, DRB1*13:02, DRB3*03:01, DRB4*01:03, DQB1*03:01, DQB1*06:04, DQA1*01:02, DQA1*03:03, DPB1*04:01, DPB1*04:02.

Family studies by Darke et al. and confirmatory exchange results indicated that the haplotypes in this donor were A*02:01-B*49:03-C*07:01-DRB1*13:02-DRB3*03:01-DQB1*06:04-DQA1*01:02 and A*24:02-B*44:02-C*05:01-DRB1*04:01-DRB4*01:03-DQB1*03:01-DQA1*03:03.

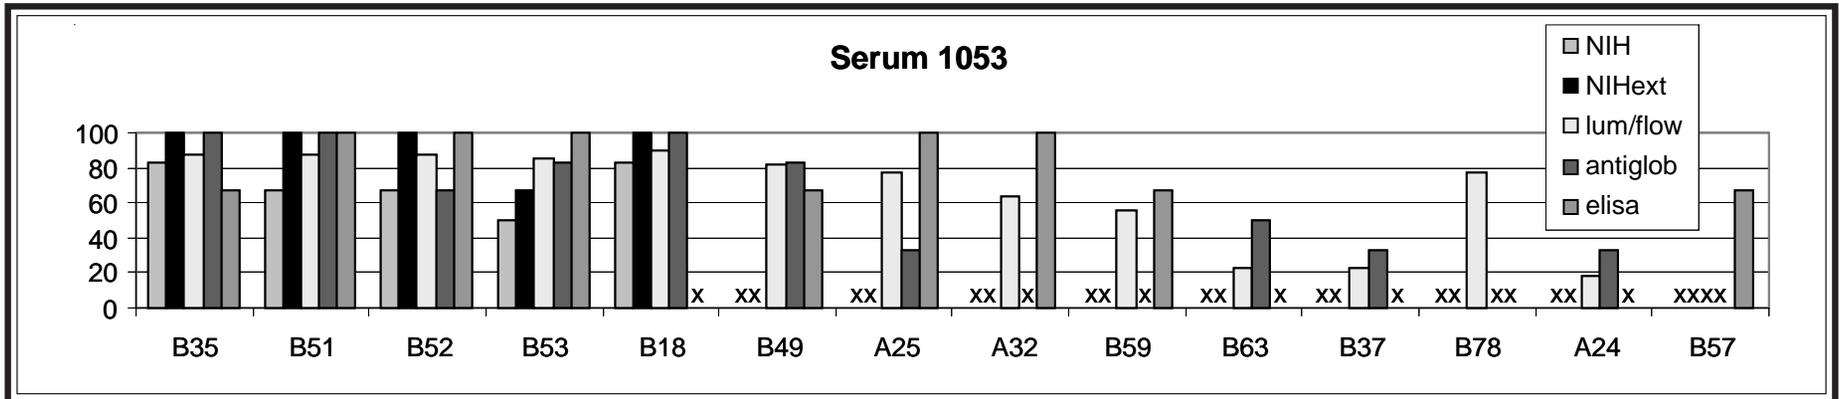

DPA1*01:03 was reported by Charron and J.Lee.

DPB1*04:01 (65%) and DPB1*04:02 (61%) were detected. DPB1*04:01:01G indicates ambiguity between DPB1*04:01 and DPB1*126:01. DPB1*04:02:01G denotes ambiguity between DPB1*04:02 and DPB1*105:01. Other reported DPB1 alleles were DPB1*120:01N and DPB1*128:01.

Serum Exchange

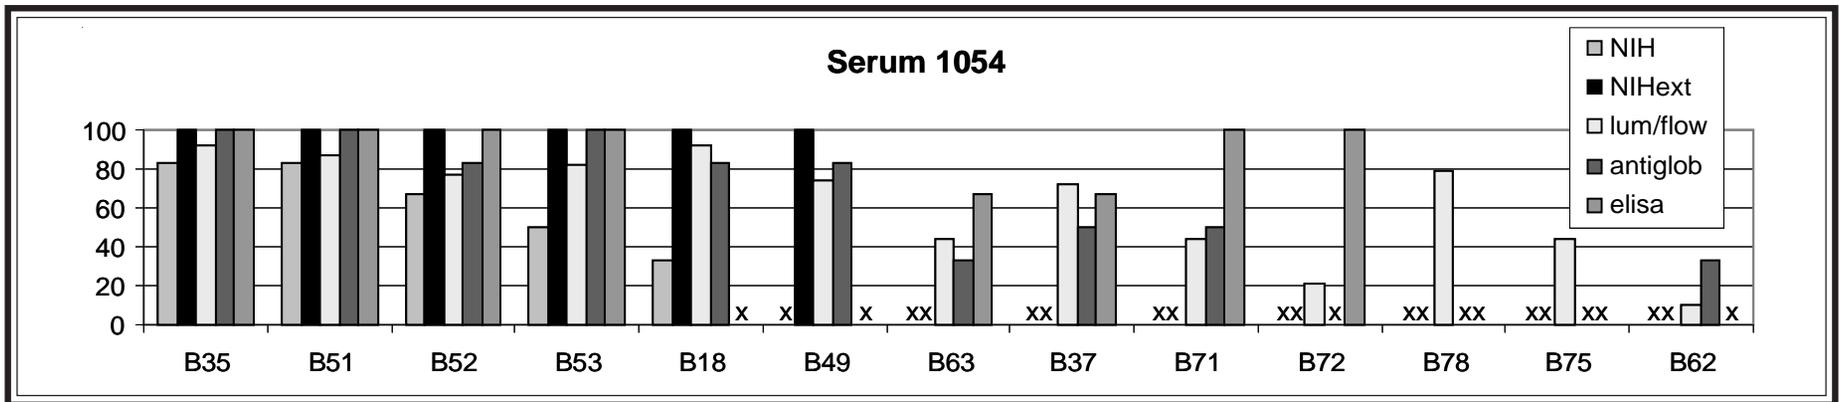

Antibodies (**sera 1053-1056**) reactive to 5CREG specificities, including B35, B51, B52, B53, B18, B78, B15, B70, and B21, were examined in this exchange study. All 4 samples were positive to B35, B51, B52, and B53 by all

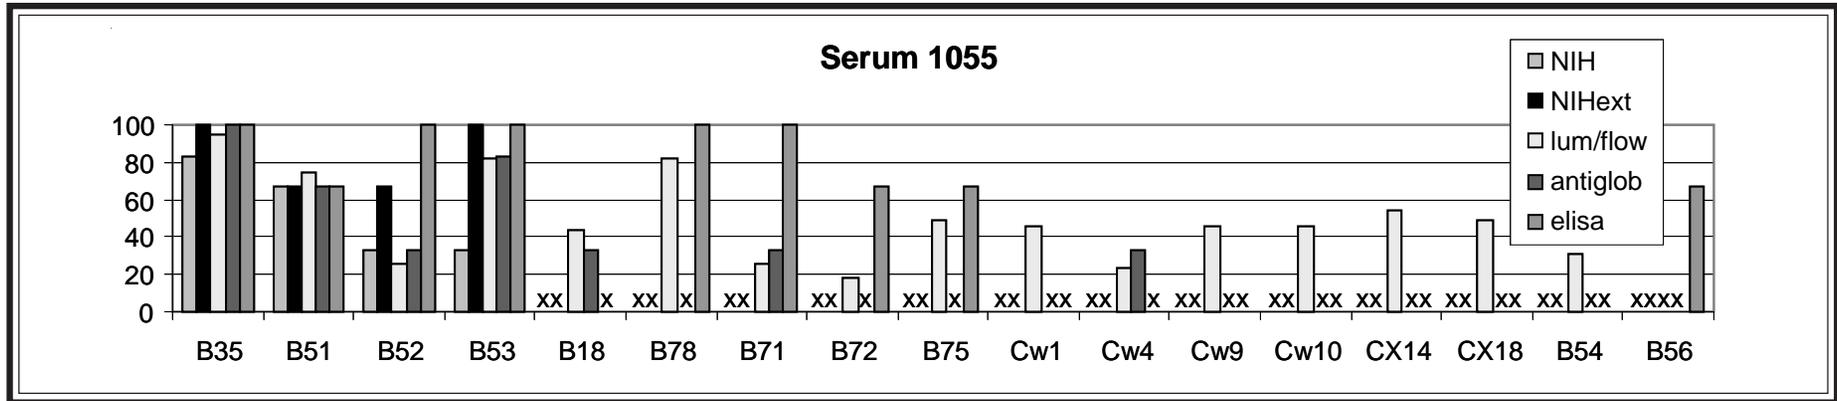

methods, with the exception of NIH labs not reporting anti-B52 reactivity for serum 1056.

Serum 1053 was strongly positive to B35, B51, B52, B53, and B18 by all methods, except that ELISA labs did not detect B18. Luminex, flow, antiglobulin, and ELISA labs also detected B49 and A25. Luminex, flow, and ELISA also reported A32 and B59. Strong anti-B78 reactivity was found by Luminex and flow.

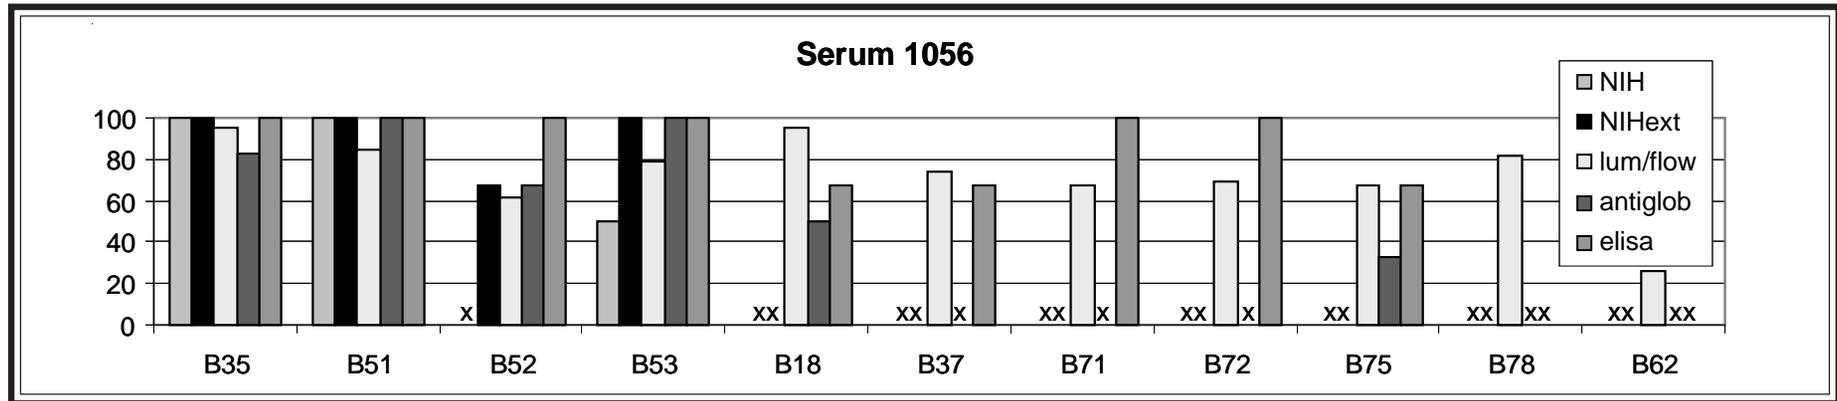

Serum 1054 was additionally positive to B18 by all methods, except by ELISA. B49, B63, B37, and B70 were reported by Luminex, flow, antiglobulin, and ELISA labs. As observed with serum 1053, Luminex and flow also detected strong anti-B78 reactivity.

Serum 1055 was positive to B35, B51, B52, and B53. Strong anti-B78 reactivity was reported by Luminex, flow, and ELISA labs. Varied anti-B18, -B70, and -B75 reactivity was reported. Luminex and flow labs detected additional reactivity to a number of C-locus specificities, including Cw1, Cw3, Cw4, Cx14, and Cx18.

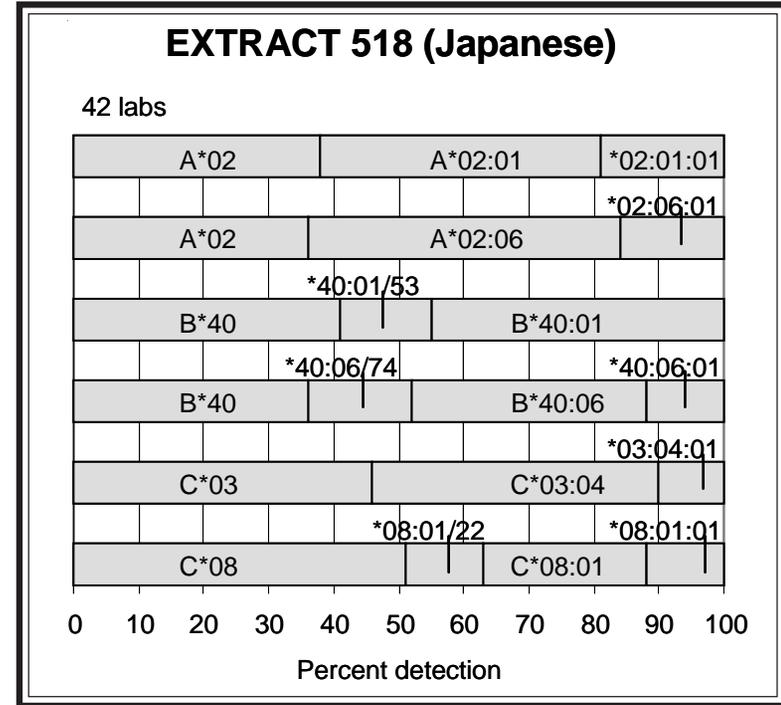

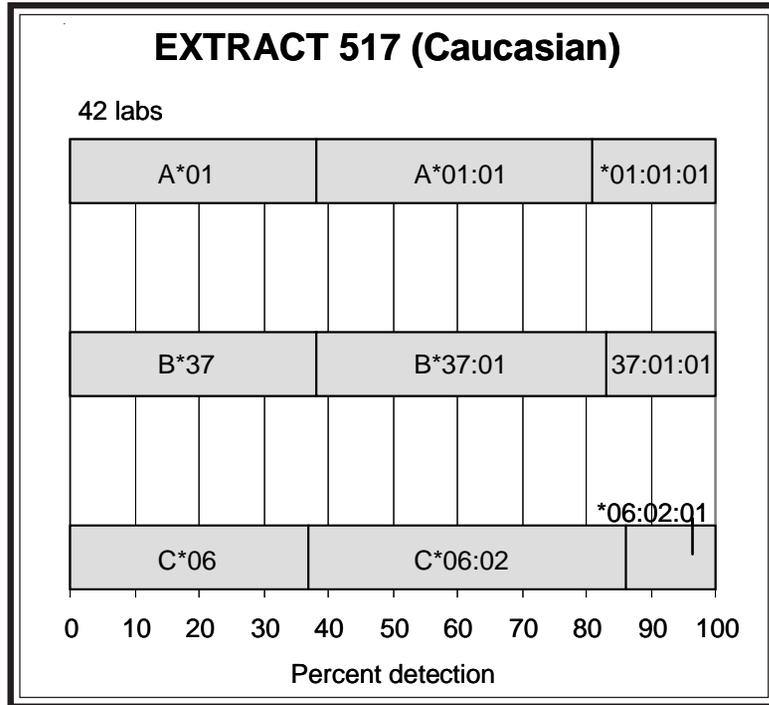

Additional reactivity to B18 and B75 was reported for **serum 1056** by labs using Luminex, flow, antiglobulin, and ELISA. Luminex, flow, and ELISA detected strong anti-B37 and -B70 reactivity. As was found with both sera 1053 and 1054, this sample was strongly positive to B78 by Luminex and flow.

Extract Exchange

Workshop cells, two initially typed in the 10th Workshop and another cell from the 13th Workshop, were typed in this month's study. The fourth cell with

the intriguing A*24:02:01:02L was included as a retyping to follow the standardization of this rare allele.

Extract 517. This homozygous cell from a Caucasian individual was KAS011. According to the IMGT/HLA web site, it serves as an invaluable reference cell for a number of alleles, including B*37:01:01, DPB1*04:01:01, DPB1*14:01, DQA1*01:02:01, DQB1*05:02:01, DRB6*02:02, MICA*010:01, and MICB*002:01:01. The cell was originally studied as IHW#9009 in the 10th Workshop.

A*01:01-B*37:01-C*06:02 was the high-resolution type reported by over 60% for this cell. This haplotype is found in all populations, especially in Caucasian (HF=0.00801) and Asian (HF=0.00973) populations.

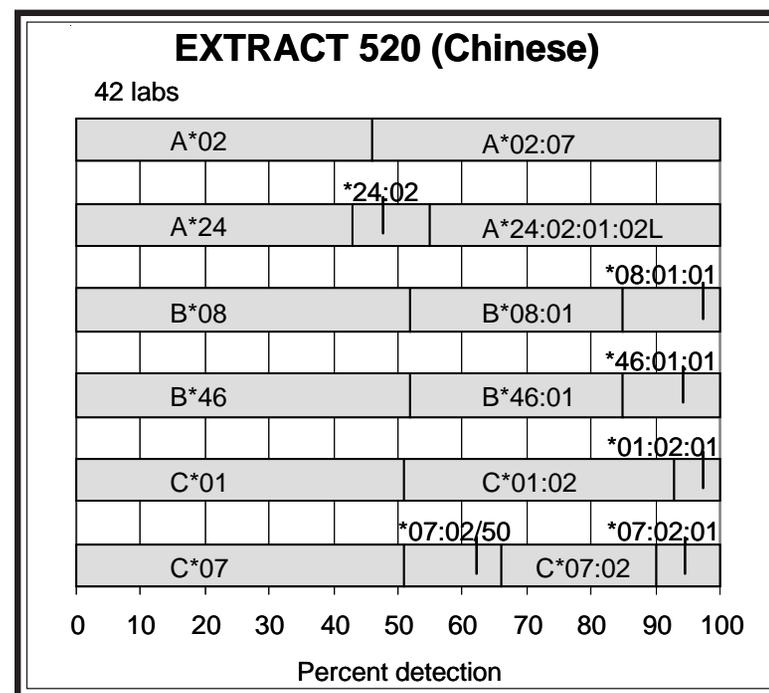

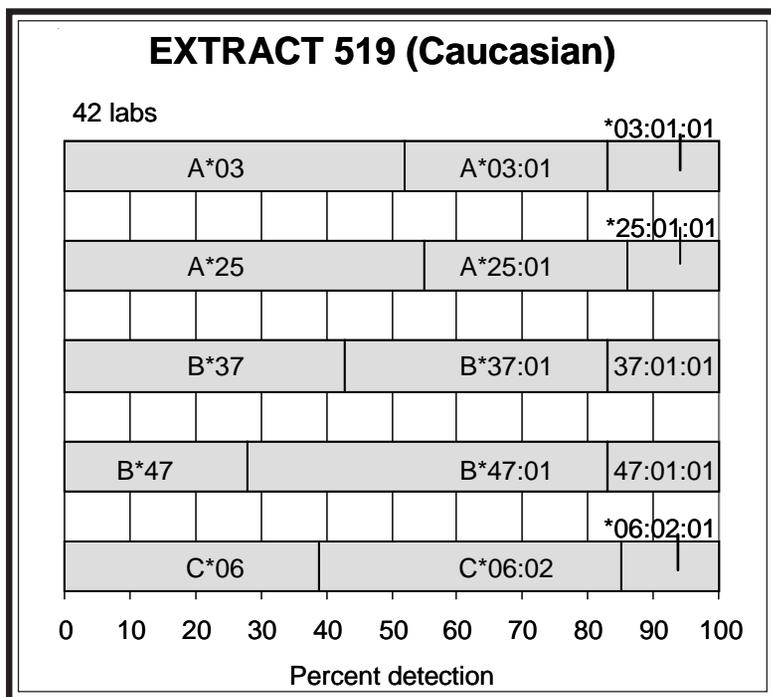

Extract 518. This Japanese cell was HID, studied in the workshops as IHW#9074.

A*02:01 (62%) and A*02:06 (64%) were detected. Interestingly, this finding of 2 different A*02 alleles is in contrast to the reported typing of A*02:01, - for this cell by the 13th Workshop and the IMGT/HLA web site.

B*40:01 (45%) and B*40:06 (48%) were the B-locus types.

C*03:04 and C*08:01 were reported by 54% and 37%, respectively.

B*40:01-C*03:04 and B*40:06-C*08:01 are strong associations found in Asian populations.

Extract 519. This cell from a Caucasian donor was #15310-LN, the reference cell for the rare DRB1*14:17. It was typed in the workshops as IHW#9326. B*47:01 was assigned by 72%. The other B-locus allele was B*37:01 (57%). A*03:01 (48%) and A*25:01 (45%) were the A-locus types. C*06:02 (61%) was the sole C-locus type.

Extract 520. This Chinese cell with A*24:02:01:02L was previously typed as cells 1284 (2006) and 1303 (2007) by both serology and molecular-based typing methods. A sibling was typed as cell 1311 (2007). In all 3 typings, the low-expressing A24 allele was assigned by 5% or less. A*24:02:01:02L was detected by 46% for cell 1303 and by 43% for cell 1311. This same allele was also typed in extract 457 (2009) [also extracts 150, (2000) and 324,

(2005)] from a Caucasian donor.

In this present retyping, A*24:02:01:02L was reported by 41%. In studying this allele in several related donors, LaForet et al. (3) said "The only difference between the A*2402101 and A*24 deficient alleles was found to be located at the end of the second intron, where all three members of the family showed an "A" instead of the "G" of HLA*2402101, seven nucleotides before exon 3." This mutation in the acceptor site in intron 2 results in incorrect splicing, mainly in exon 3.

The sibling study revealed the haplotypes in this cell as A*24:02:01:02L-B*08:01-C*07:02 and A*02:07-B*46:01-C*01:02, a commonly found haplotype in Asian populations. According to the NMDP Bioinformatics web site, A*02:07g-B*46:01-C*01:02 has HF=0.03235, the second highest haplotype frequency in U.S. Asians.

Cell Exchange

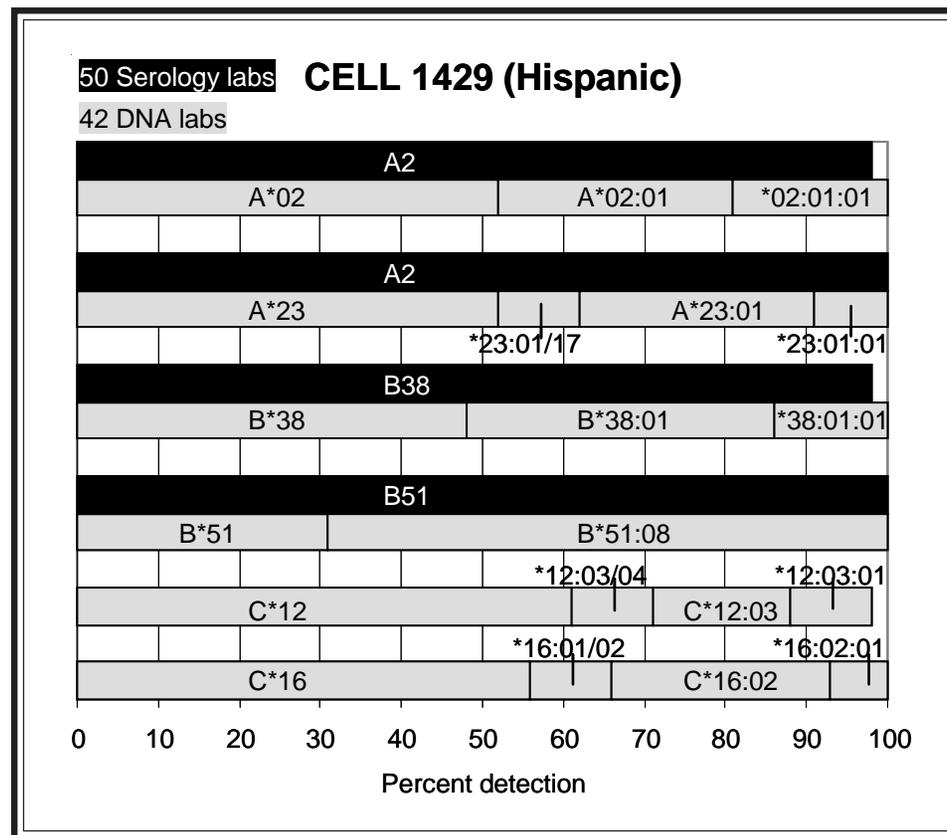

Cell 1429. This cell from an Hispanic donor was previously typed as cells 1241 (2005), 1269 (2006), and 1299 (2007), as correctly identified by a number of labs.

B51 was assigned in complete consensus. B*51:08 was detected by 69%.

B38 (98%) was confirmed as B*38:01 (52%).

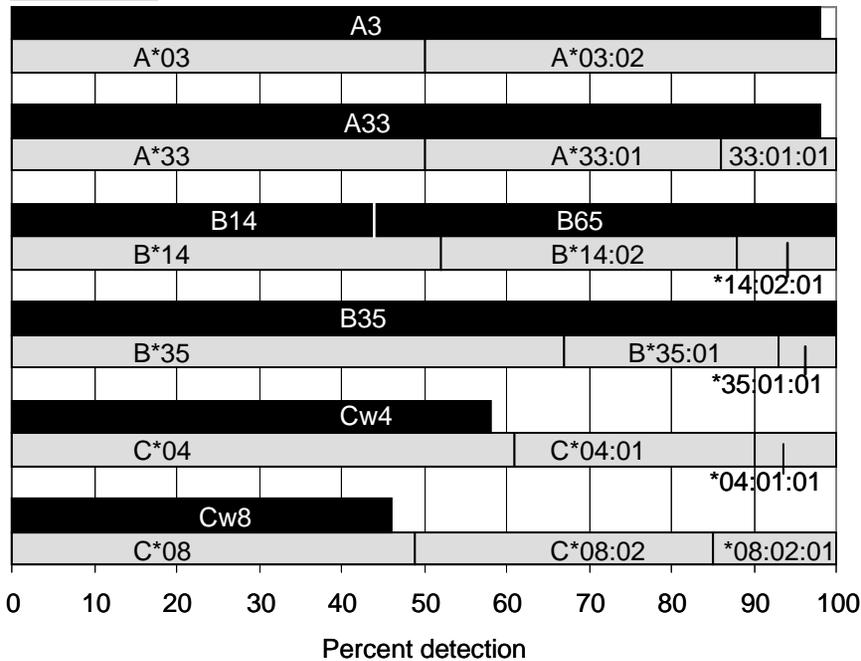

C*12:03 (27%) and C*16:02 (34%) were the C-locus types.

The likely associations were B*38:01-C*12:03 and B*51:08-C*16:02. B*51:08-C*16:02 was also present in the other B*51:08 exchange cells, extracts 93 (Cauc) and 386.

50 Serology labs CELL 1430 (Hispanic)

42 DNA labs

Cell 1430. This Hispanic cell was well typed as A3, A33, B14 (B65), B35, Cw4, Cw8 and verified as A*03:02, A*33:01, B*14:02, B*35:01, C*04:01, C*08:02.

Two strong associations, B14-Cw8 and B35-Cw4, were present in this cell.

One likely haplotype in this cell may be A*33:01-B*14:02-C*08:02, with HF=0.01552, which is the fourth most frequently found haplotype in U.S. Hispanics. The other probable haplotype was A*03:02-B*35:01-C*04:01.

Cell 1431. This Hispanic donor with the rare B*15:04 was previously typed as cell 1318 (2007) and extract 429 (2008). It remains the sole B*15:04 cell typed by both serology and DNA in the Cell Exchange. GRC-138, a reference B*15:04 cell, was also typed in the Cell Exchange by DNA methods only, as extracts 130 (2000), 239 (2003), and 362 (2006).

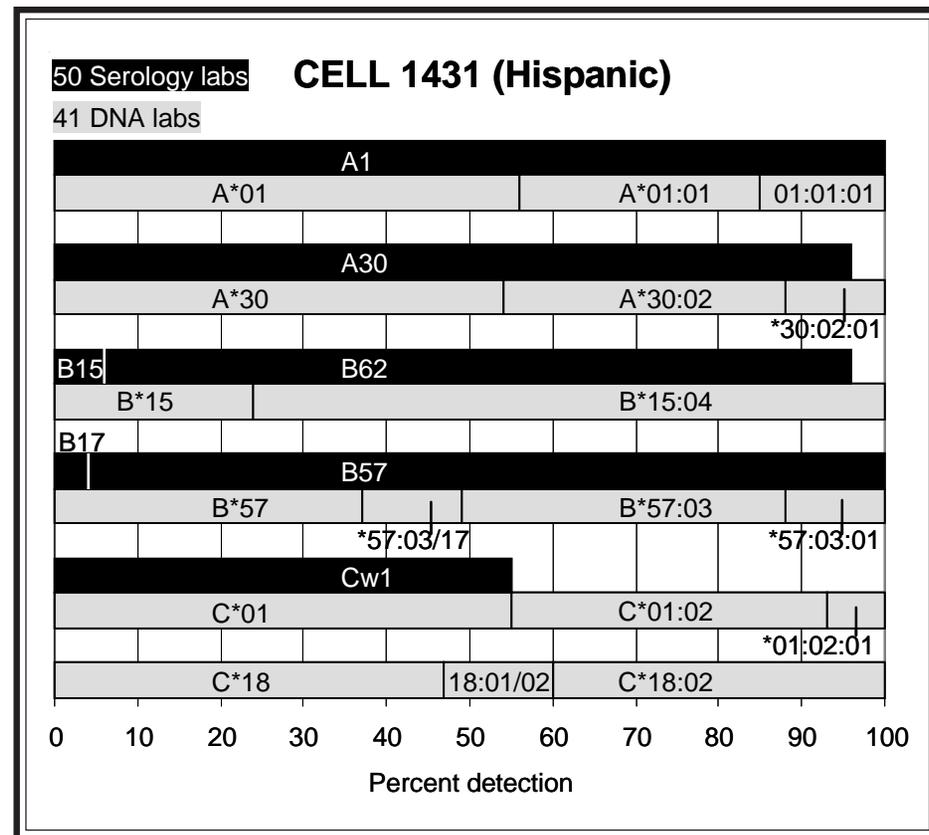

In this present retyping, B62 was assigned by 90%, the same detection level as that achieved in 2007. B*15:04 was reported by 76%, the same rate as in 2008.

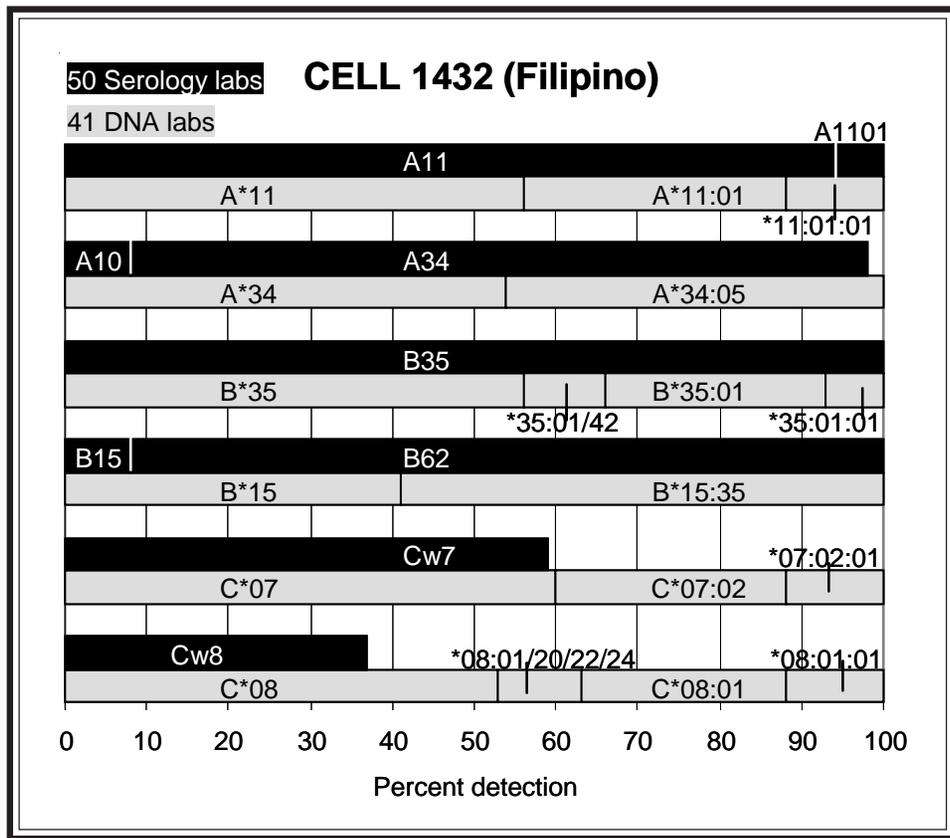

B57 (96%) was corroborated as B*57:03 (51%).

C*18 was one C-locus type; C*18:02 was assigned by 38%. The reporting of Cw6 by 16% indicated that the encoded antigen was reactive to some anti-Cw6 sera. In the 2007 typing, Cw6 was assigned by 33%.

The second C-locus antigen was Cw1 (55%), confirmed as C*01:02 (45%).

The associations in this cell may be B*15:04-C*01:02 and B*57:03-C*18:02. B*57:03-C*18:02 was also present in cells 1083 (2001) and 1144 (2002), both from Black donors.

Cell 1432. This Filipino cell was previously typed in the Cell Exchange as cell 1347 (2008) and 1372 (2009) by both serology and DNA typing, as well as extracts 413 and 416 in 2008 by DNA typing only.

A34 was detected by 90% in this present retyping. The rare A*34:05 was reported by 46%. Lebedeva et al. (4) described A*34:05 as having only one difference from A*34:01, at codon 125 (GCC->TCC), resulting in an amino acid change of Ala->Ser.

The other A-locus antigen was A11 (100%), validated as A*11:01 (44%).

B35 (100%) and B62 (92%) were reported; B*35:01 (34%) and B*15:35 (59%) were the B-locus alleles. In the initial 2008 typing, Tilanus commented that the sequences for exons 1 and 4 for B*15:35 were identical to those of B*15:01:01; at that time, this information was not available in the IMGT/HLA Database.

Cw7 (59%) and Cw8 (36%) were confirmed as C*07:02 (40%) and C*08:01 (37%), respectively.

B*35:01-C*07:02 and B*15:35-C*08:01 may be the associations in this cell. B*15:35-C*08:01 was present in cells 1052 (2000) and 1253 (2005), both from Filipino donors. From family studies, A*34:01-B*15:35-C*08:01 was confirmed in cell 1253. We speculate that for this present cell, A*34:05-B*15:35-C*08:01 and A*11:01-B*35:01-C*07:02 may be present.
