

REPORT OF THE 359th CELL EXCHANGE

AUGUST 3, 2011

B-cell line Exchange

B-cell Line	457-460
Serum	1057-1064
DNA Extract	521-524
Cells	1433-1436

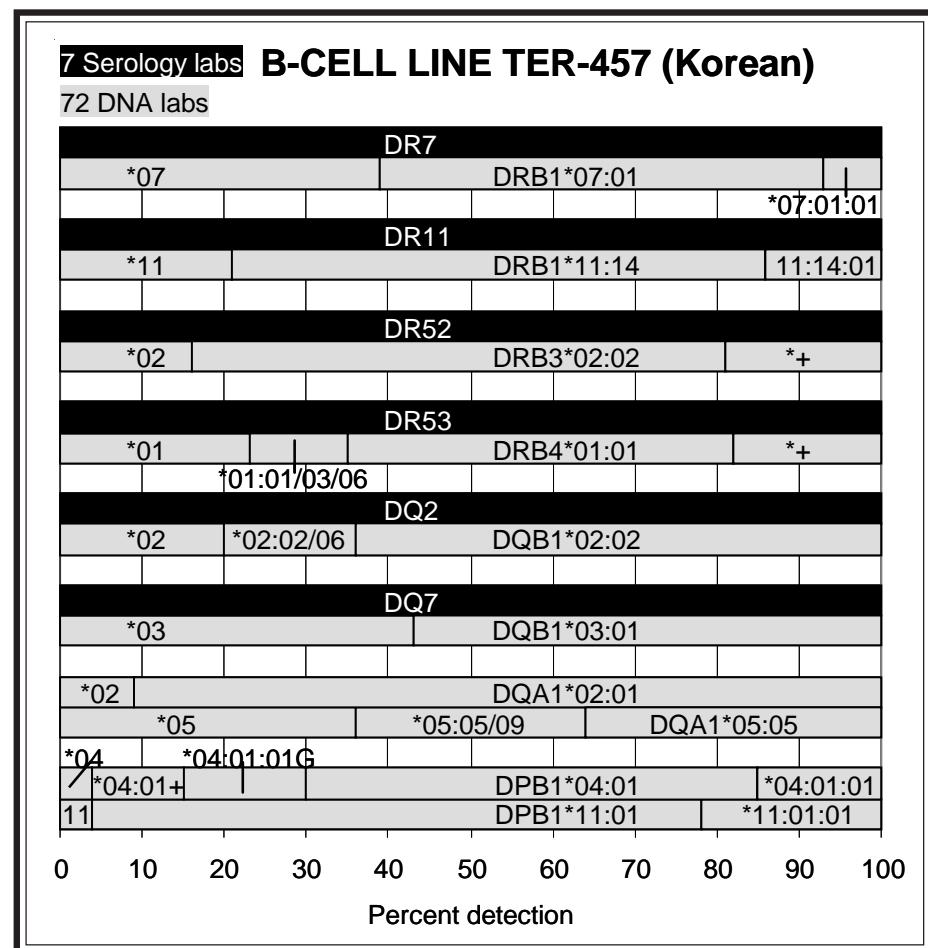

TER-457. The rare DRB1*11:14 was detected by 79%, with 14% assigning DRB1*11:14:01, in this retyping of this Korean cell. It was previously typed as TER-364 (2005), as correctly identified by Hahn, Lopez-Cepero, Stamm, and Tiercy. A reference DRB1*11:14 cell, 12762, was also typed in the Cell Exchange as TER-289 (2001) and TER-349 (2003).

This donor was well typed as DR7, DR11, DR52, DR53, DQ2, and DQ7.

The common DRB1*07:01-DRB4*01:01-DQB1*02:02-DQA1*02:01 and DRB1*11:14-DRB3*02:02-DQB1*03:01-DQA1*05:05 were the probable haplotypes. The same DRB1*11:14 haplotype was also found in the reference cell, 12762.

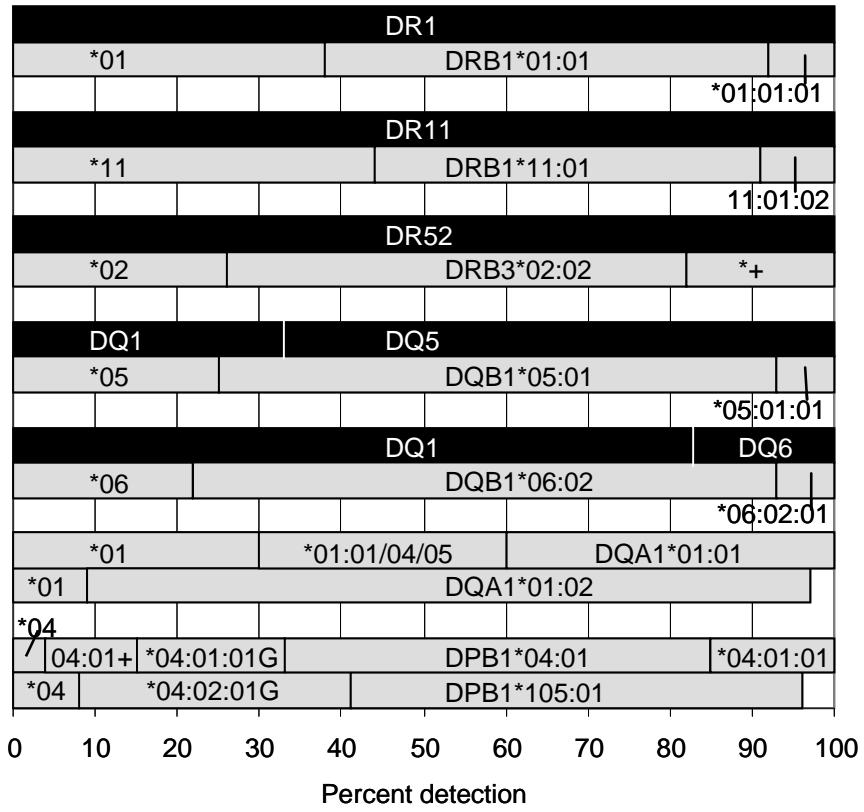

DPA1*01:03 and DPA1*02:01 were reported by Charron, Eckels, Jaatinen, and J.Lee.

DPB1*04:01 (70%) and DPB1*11:01 (96%) were assigned. Four labs did not resolve between DPB1*04:01 and DPB1*126:01 (formerly DPB1*0602); therefore, DPB1*04:01:01G was denoted. 'DPB1*04:01+' included labs that assigned other possibilities, including DPB1*120:01N and DPB1*128:01.

6 Serology labs B-CELL LINE TER-458 (Black)

72 DNA labs

TER-458. This cell from a Black individual was typed nearly 20 years ago, as TER-119 in 1993.

In this present retyping, DR1 and DR11 were reaffirmed as the common DRB1*01:01 (62%) and DRB1*11:01 (56%), respectively.

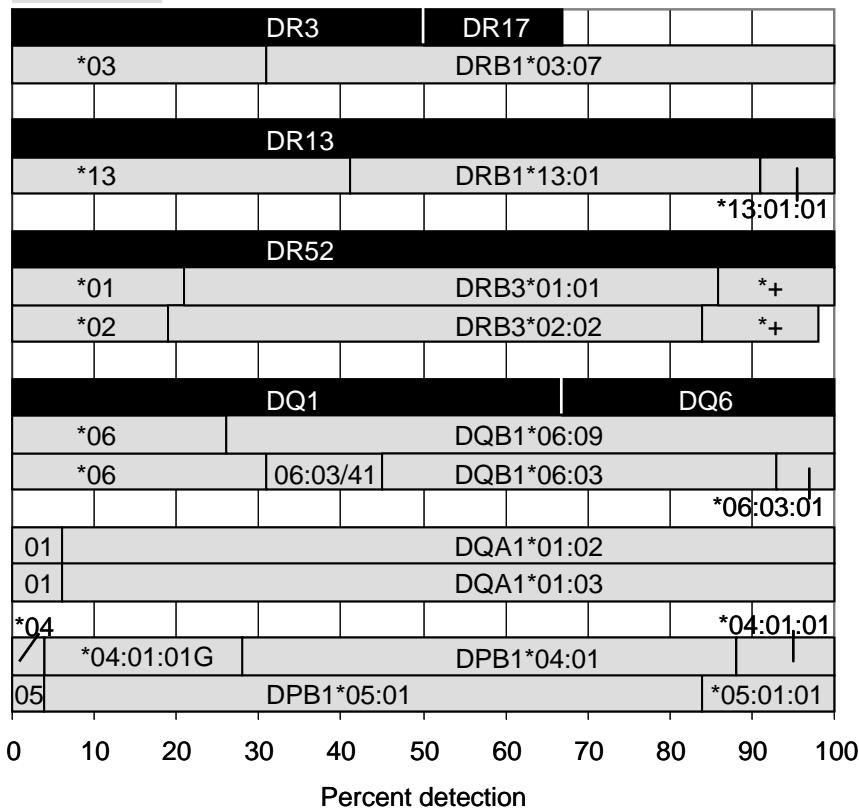

The probable associations were DRB1*01:01-DQB1*05:01-DQA1*01:01, found in all ethnic groups, and DRB1*11:01-DRB3*02:02-DQB1*06:02-DQA1*01:02, predominantly found in Black populations. DRB1*11:01 is usually found in association with either DQB1*03:01 or DQB1*06:02 in Blacks.

DPA1*01:03 and DPA1*03:01 were assigned by Charron, Eckels, Jaatinen, and J.Lee.

DPB1*04:01 (67%) was one DPB1 allele. For the second DPB1 type, DPB1*105:01 was assigned by 55%. Nine labs did not resolve between DPB1*04:02 and DPB1*105:01; 33% of the final assignments was denoted as DPB1*04:02:01G.

6 Serology labs B-CELL LINE TER-459 (Caucasian)

68 DNA labs

TER-459. This Caucasian cell with the rare DRB1*03:07 was SCL-116A, typed in the workshops as IHW#9465. Ellis et al. (1) described the DRB1*03 allele, “In the region covering codons 1-102, the new allele, DRB1*0307, differs from DRB1*03011 at codon 26, TTC versus TAC found in DRB1*03011, resulting in a predicted amino acid change from tyrosine to phenylalanine.” This was the first time that DRB1*03:07 was typed in the Cell Exchange.

DRB1*03:07 was detected by 69%. DR3 was assigned by 50% and DR17 by 17%. For this allele, the HLA dictionary listed only one NMDP cell typed as DR3; the Neural Network data predicted that the serologic expression would be DR17.

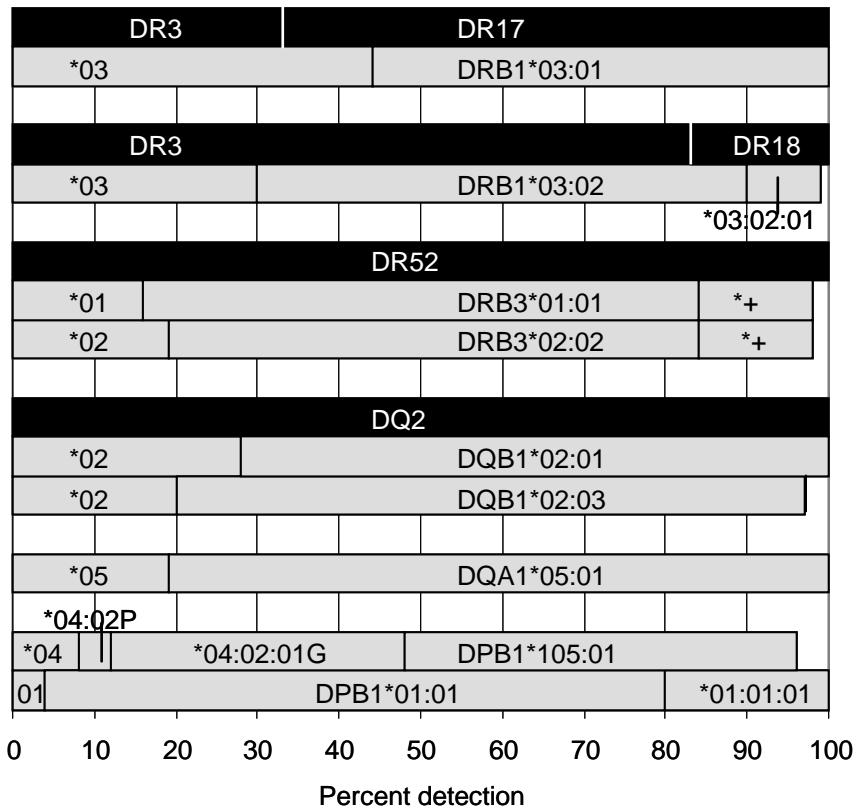

One haplotype may be DRB1*03:07-DRB3*02:02-DQB1*06:03-DQA1*01:02. Based upon common associations, Ellis et al. said that DRB1*03:07 would be found in association with DRB3*02:02 and DQB1*06:03. The other haplotype in this cell may be DRB1*13:01-DRB3*01:01-DQB1*06:09-DQA1*01:03. The NMDP Bioinformatics data indicate that DRB1*13:01-DQB1*06:09 (freq=0.00008) has been found in Caucasians, but at a much lower rate than the commonly found DRB1*13:01-DQB1*06:03 (freq=0.05801). DQB1*06:09 have been typed in a number of DRB1*13:02 and DRB1*13:36 exchange cells, but not in DRB1*13:01 cells so far.

DPA*01:03 and DPA1*02:01 were assigned by Charron, Eckels, and J.Lee.

DPB1*04:01 (69%) and DPB1*05:01 (97%) were reported.

6 Serology labs B-CELL LINE TER-460 (Black)

68 DNA labs

TER-460. This Black donor was initially typed 20 years ago, as TER-75 (1991) and retyped as TER-141 in 1994, as correctly noted by Lopez-Cepero. It was included in this present study to serve as a DRB1*03:01 standard to compare with the rare DRB1*03:07.

In this present retyping, DR17 (67%) and DR18 (17%) were confirmed as DRB1*03:01 (56%) and DRB1*03:02 (69%), respectively.

The probable associations were DRB1*03:01-DRB3*01:01-DQB1*02:01-DQA1*05:01, commonly found in all populations, and DRB1*03:02-DRB3*02:02-DQB1*02:03-DQA1*05:01. DRB1*03:02 is commonly found in association with DQB1*04:02 in Blacks.

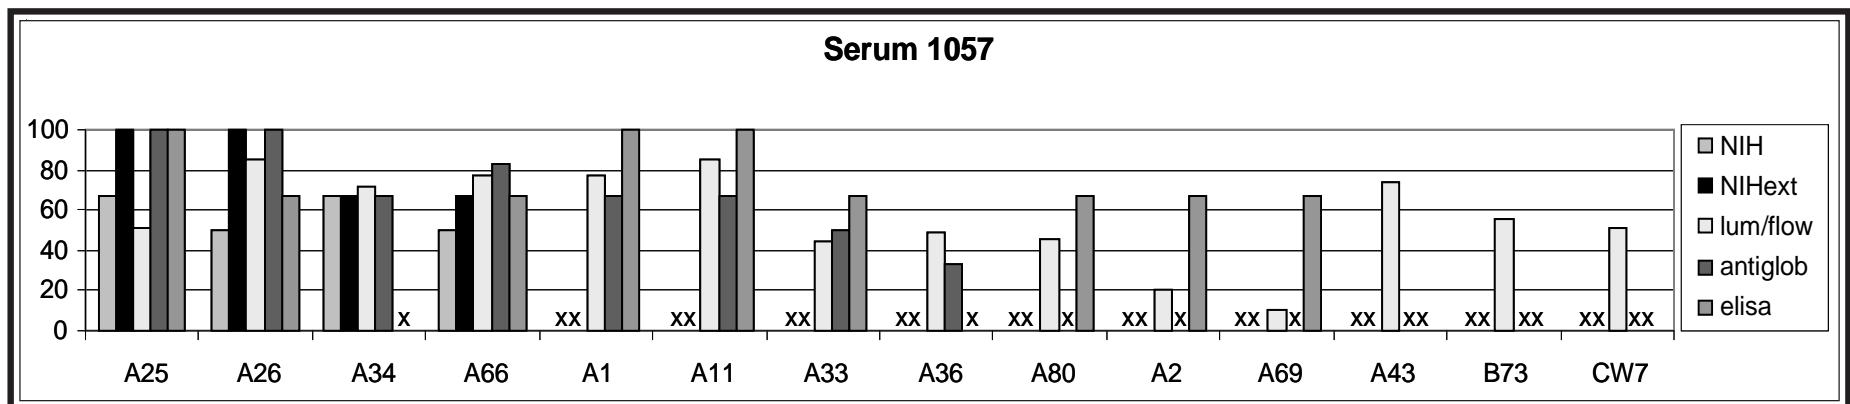

DPA1*02:02 and DPA1*03:01 were reported by Charron, Eckels, and J.Lee.

DPB1*01:01 (96%) was one DPB1 allele. For the second DPB1 type, DPB1*105:01 was assigned by 46%. Ten labs did not resolve between DPB1*04:02 and DPB1*105:01; this was denoted as DPB1*04:02:01G by 38% and DPB1*04:02P by 4%.

Serum Exchange

One study (**sera 1057-1060**) examined antibodies positive to A10 specificities, including A25, A26, A34, and A66. Threonine at position 149 is unique for A10 specificities.

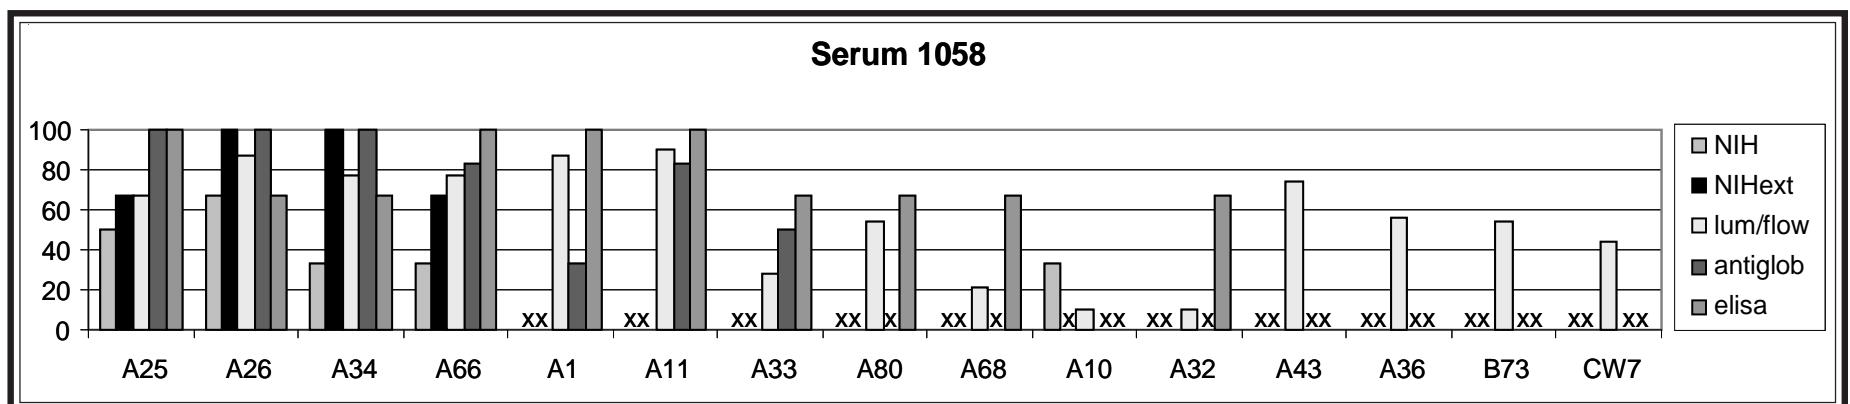

The second study (**sera 1061-1064**) featured sera reactive to the 12CREG specificities, including B12 (B44, B45), B21 (B49, B50), B40 (B60, B61), B13, B41, and B47.

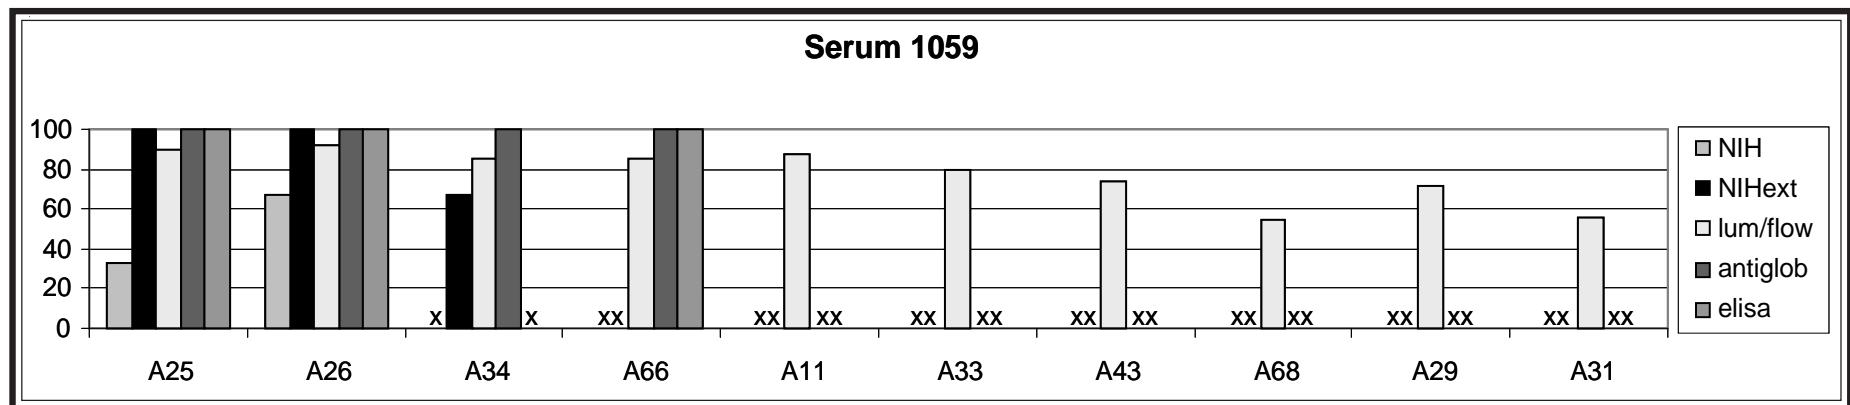

Sera 1057-1060 were reactive to A25 and A26 by all methods, with the exception of labs using NIH methods not detecting anti-A25 reactivity for serum 1060. Of the 4 serum samples, only serum 1058 was positive to all the A10 specificities by all methods.

The reactivity patterns for **sera 1057 and 1058** were similar, being positive to the A10 specificities by all methods, except that ELISA labs did not detect

A34 in serum 1057. Antiglobulin, Luminex, flow, and ELISA labs reported additional reactivity to A1, A11, and A33. For both sera, Luminex and flow also reported strong anti-A43 reactivity and weaker reactivity to A36, A80, B73, and Cw7. ELISA labs reported reactivity to A80, A28, and A32 for both sera and to A2 for serum 1057.

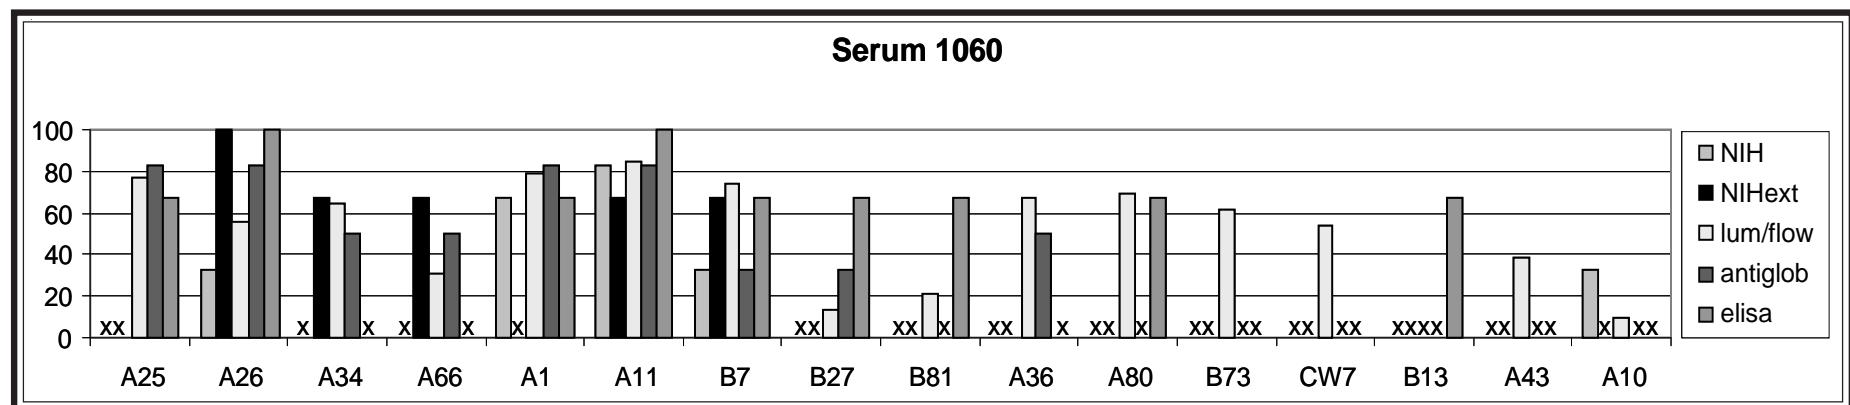

Serum 1059 demonstrated more varied reactivity to A34 and A66, depending upon which method was used. Labs using Luminex and flow detected additional reactivity to A11, A33, A43, A68, A29, and A31.

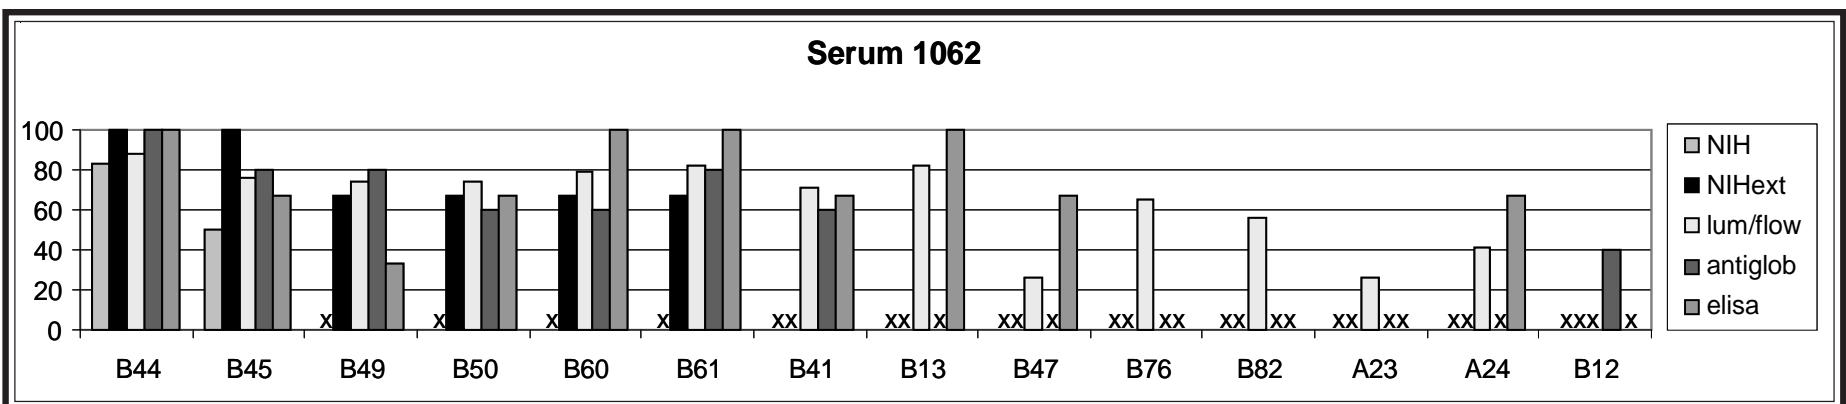

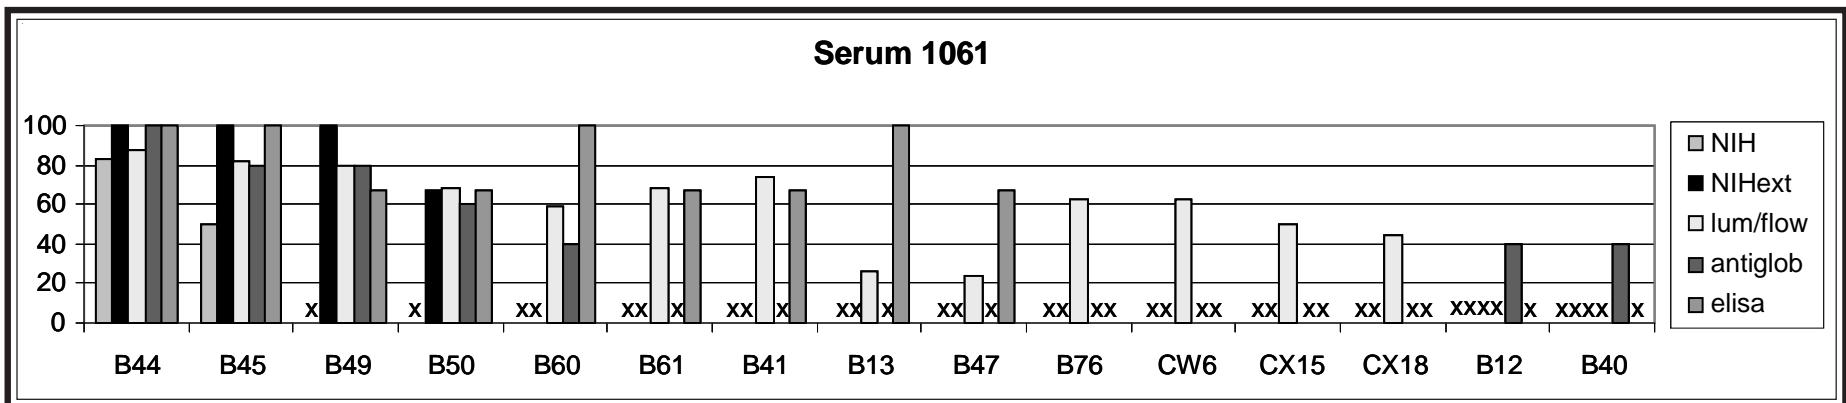

Serum 1060 reacted as a stronger antibody for A26 than for A25; NIH

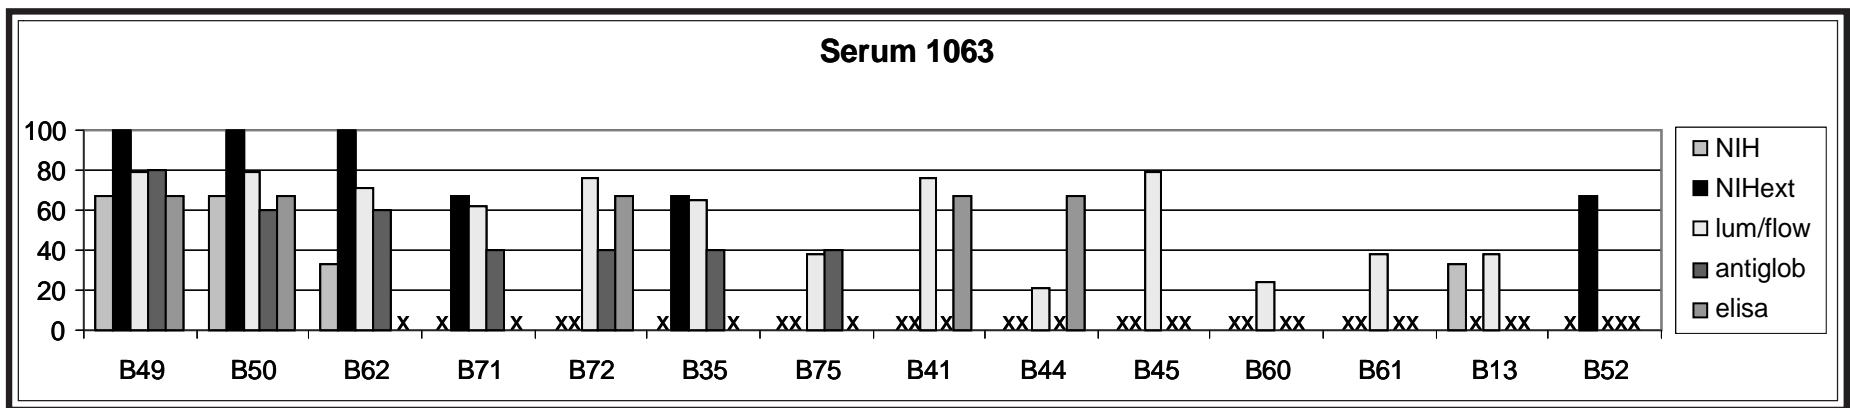

labs did not detect A25. Strong anti-A1 and -A11 reactivity was reported by all methods, with the exception of the labs using extended NIH not detecting A1. Extended NIH, Luminex, flow, and antiglobulin labs also detected anti-A34 and -A66 reactivity. Reactivity to B7 was reported by all methods.

Serum 1061 was strongly positive to B12 and B21 by all methods, with the exception that labs using standard NIH did not detect anti-B21 reactivity. Luminex, flow, antiglobulin, and ELISA labs also reported reactivity to the B40 specificities. Additional reactivity to B41, B13, and B47 were detected by Luminex, flow, and ELISA; reactivity to B76 and various C-locus specificities were reported by Luminex and flow labs.

Serum 1062 was positive to B12, B21, and B40 by all methods, with the exception that labs using standard NIH did not report B21 and B40 specificities. B41 was also detected by Luminex, flow, antiglobulin, and ELISA. Reactivity to B13, B47, and A9 was reported by Luminex, flow and ELISA. Luminex and flow also detected B76 and B82.

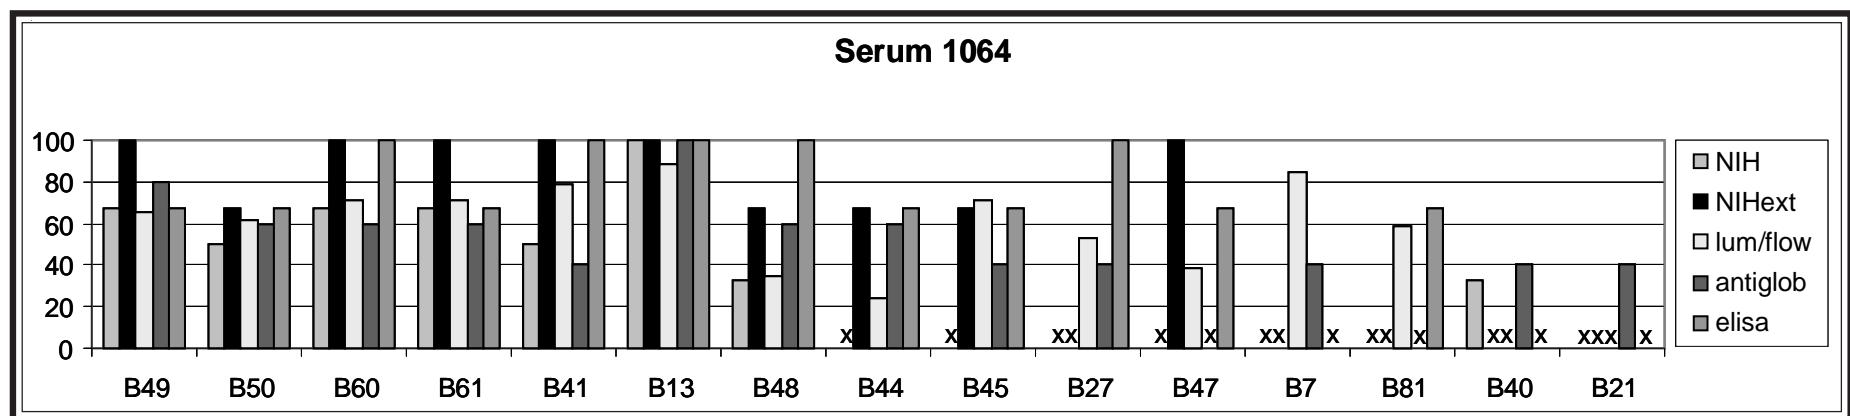

Serum 1063 was determined to be a strong antibody for B21, but a weaker antibody for B12 and B40 specificities. Luminex, flow, and ELISA reported B41. Additional reactivity to other B-locus specificities, including B35, B62, B70, B75, and B52, was detected. The overall reactivity pattern was similar to that of serum 996 (2009).

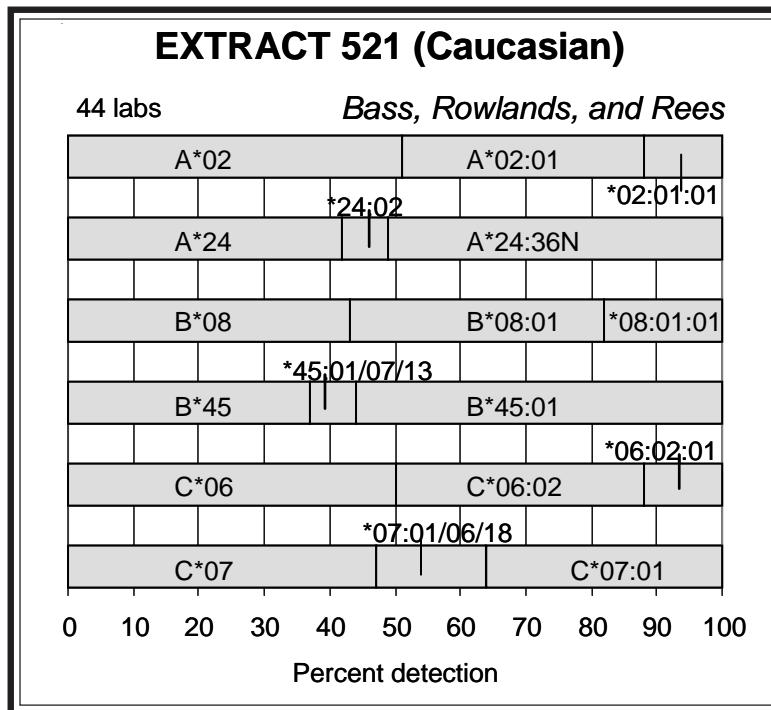

Serum 1064 was positive to B12, B21, B40, B41, B13, and B48 by all

methods, with the exception that standard NIH labs did not detect B44 and B45. Overall, the anti-B12 reactivity of this sample was weaker than the reactivity determined for both sera 1061 and 1062, but much stronger than the anti-B12 reactivity for serum 1063. Varied reactivity to B7, B81, B27, and B47 was also reported.

Extract Exchange

We wish to acknowledge the generosity of **Helen Bass, Jane Rowlands, and Tracey Rees, Welsh Blood Service, Pontyclun, and Franco Tavarozzi, Steve Marsh, and Alejandro Madrigal, Anthony Nolan Research Institute, The Royal Free Hospital, London**, in sharing invaluable cells with rare alleles.

Extract 521. This cell from a Caucasian donor was 45188, one of 2 reference cells for A*24:36N. Li et al. (2) described the null allele, "Sequencing of the A*24 gene...revealed a deletion of two nucleotides (g,g) at positions 180 and 181 in exon 2. This deletion of these two nucleotides results in a frameshift as well as in a premature stop codon (tga)." Other than the 2 deletions, the sequence is identical to that of A*24:02. The other A*24:36N reference cell, 022659718, was also from a Caucasian individual.

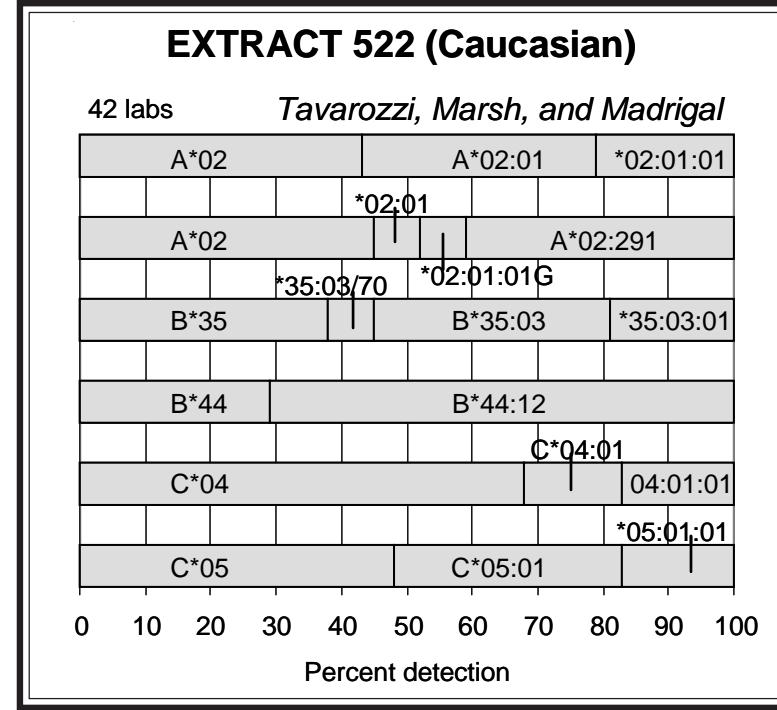

A*24:36N was detected by 52%. A*24:02 was misassigned by 7%.

A*02:01 (48%) was the second A-locus type.

B*08:01 (56%) and B*45:01 (54%) were the B-locus alleles.

Extract 522. This Caucasian cell was MOV002AN, which serves as the reference cell for B*44:12. When it was previously typed in the Cell Exchange

This month's study featured reference cells for a number of alleles, including A*02:10, the recently recognized A*02:291, A*24:36N which was typed for the first time in the Cell Exchange, and B*44:12. In addition, the rare B*39:24 was re-examined.

as extracts 201 (2002), 274 (2004), and 497 (2010), as correctly identified by Sutton, a number of labs noted a new variant of A*02.

In the 2010 typing, 14 labs agreed that, in addition to the standard A*02:01, a new A*02 allele was present, with the sequence most similar to A*02:01, except at position 880, exon 4, C>T, resulting in an amino acid change of Leu>Phe (CTC>TTC) at codon 270. This new allele has been formally recognized as A*02:291, as assigned by 40% in this retyping.

A*02:01 was assigned by 56% as the second A-locus allele.

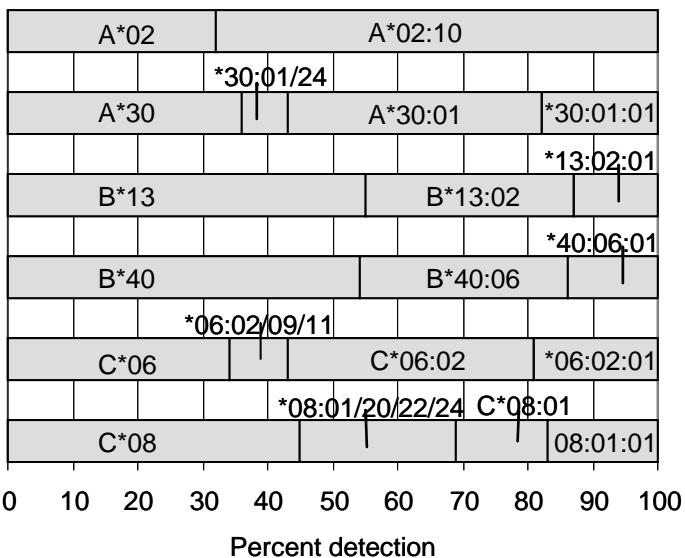

The rare B*44:12 was detected by 70%.

B*35:03 was assigned by 53%, with 14% denoting B*35:03:01.

The probable associations in this cell were B*35:03-C*04:01 and B*44:12-C*05:01.

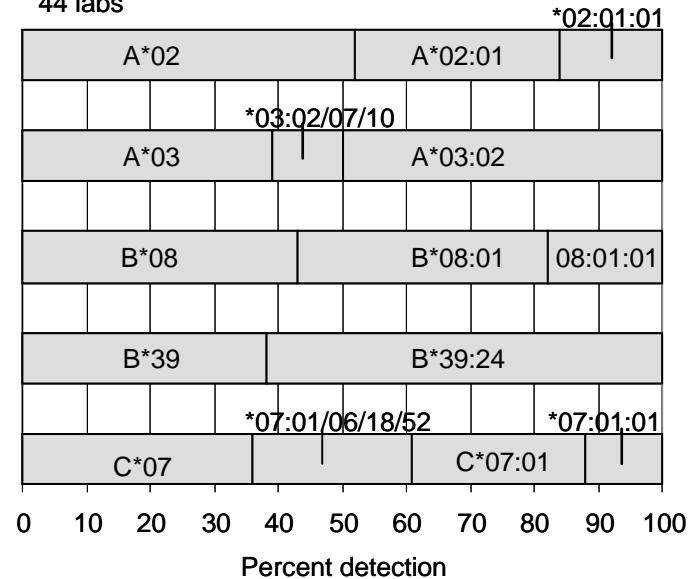

EXTRACT 523 (Chinese)

44 labs

EXTRACT 524 (Caucasian)

44 labs

Extract 523. This Chinese cell was XLI-ND and serves as a reference cell for A*02:10. It has been studied in the workshops as IHW#9220. It was previously typed in the Cell Exchange as extract 341 (2005), as correctly identified by Clark and Sutton.

A*02:10 was assigned by 67%.

This present retying reaffirmed the high-resolution typing as A*02:10, A*30:01, B*13:02, B*40:06, C*06:02, C*08:01.

One likely haplotype was A*02:10-B*40:06-C*08:01 (HF=0.00093). The other haplotype was A*30:01-B*13:02-C*06:02 (HF=0.02188), the third most frequently found haplotype in U.S. Asians.

Extract 524. This sample from a Caucasian individual was previously typed in the Cell Exchange as cells 1336 (2008) and 1379 (2009) by both serologic

and molecular-based typing methods.

The detection of the rare B*39:24 has improved from the 2008 detection level of 45% to the present 60% in this present retying. The previous serologic typing results, 92% in 2008 and 95% in 2009, indicated that the expression of this allele was that of a standard B39. B*39:24 was also typed in a Caucasian/Hispanic donor, typed as cells 1373 (2009) and 1402 (2010).

B*08:01 (56%) was the second B-locus allele.

A*02:01 (47%) and A*03:02 (49%) were the A-locus types.

C*07:01 was the sole C-locus allele, as detected by 38%.

The likely haplotypes may be A*02:01-B*39:24-C*07:01 and A*03:02-B*08:01-C*07:01. A*02:01-B*39:24-C*07:01 was also found in cell 1402.

Cell Exchange

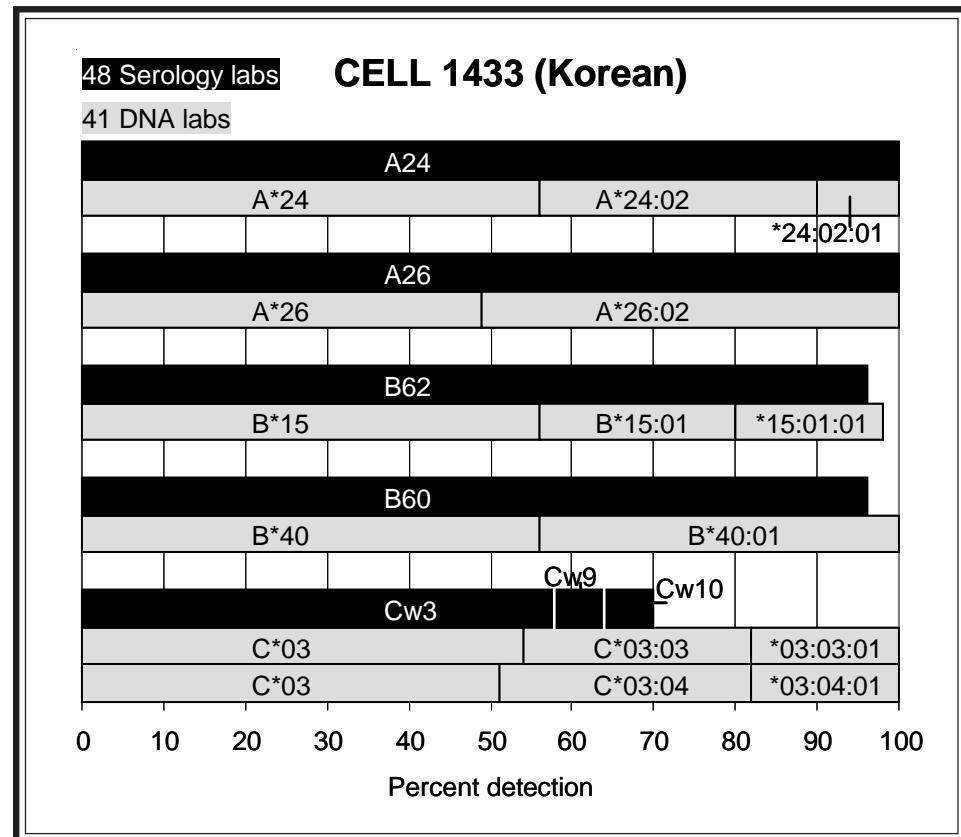

Cell 1433. A26 was assigned in complete consensus for this cell from a Korean donor. Half of the DNA labs assigned the rare A*26:02 (50%), found predominantly in Asian populations. This A*26 allele was previously typed in 4 exchange cells: 1247 (Japanese/Caucasian), 1309 (Korean), 1387 (Japanese/Caucasian), and 1395 (Japanese). Cell 1247 was also typed as extract 430, whereas, cell 1309 was previously typed as cell 1259.

A24 (100%) was confirmed as A*24:02 (43%).

B62 and B60 were detected by 96%, corroborated as B*15:01 and B*40:01 by 43%, respectively.

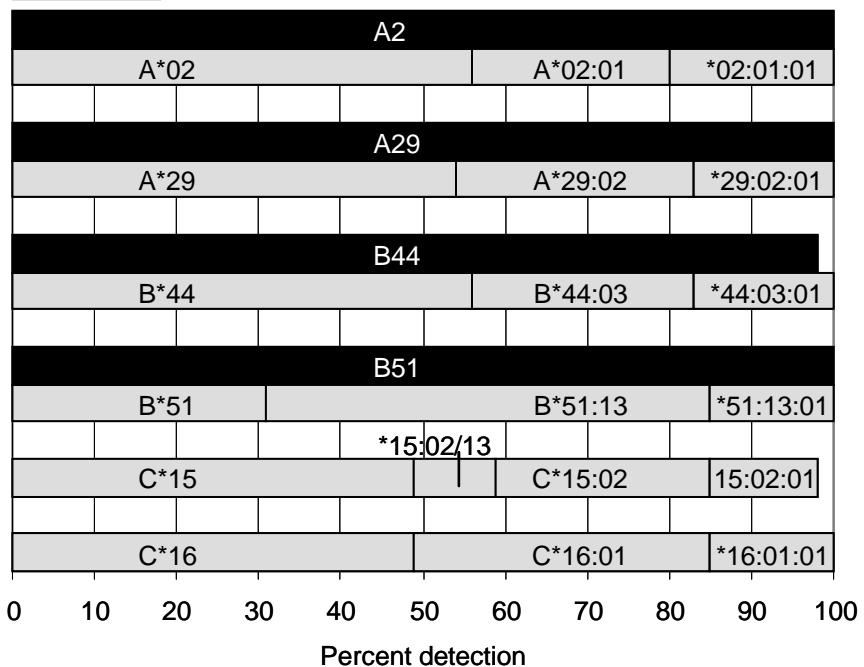

The two Cw3 subtypes, Cw9 and Cw10, were confirmed as C*03:03 (45%) and C*03:04 (48%), respectively.

The haplotypes in this cell may be A*24:02-B*40:01-C*03:04 and A*26:02-B*15:01-C*03:03. Previous A*26:02 exchange cells 1387 and 1395 also had B*15:01-C*03:03.

48 Serology labs **CELL 1434 (Hispanic)**

41 DNA labs

Cell 1434. Since 2006, this Hispanic donor has been typed multiple times in the Cell Exchange as a reference cell for the rare B*51:13. It was previously typed as cells 1271 (2006), 1302 (2007), 1340 (2008), and 1371 (2009), as correctly noted by Askar, Dunn, Lopez-Cepero, McCluskey, Mah, and Pancoska.

In this present retying, this cell was again well typed as A2, A29, B44, B51, Bw4 and validated as A*02:01, A*29:02, B*44:03, B*51:13, C*15:02, C*16:01. 'Cx15,' the C-locus antigen encoded by C*15:02, was assigned by 14%. Pollack noted short anti-Cw6 reactivity and commented that it may be due to the presence of a C*15 allele.

A 2007 family study revealed that an offspring, typed as extract 377, shared the A*02:01-B*51:13-C*15:02 haplotype. Both reference B*51:13 cells, K60 (South American Indian) and NT01087 (Caucasian) were typed as A*02-B*51:13-C*15. The other haplotype in this donor, A*29:02-B*44:03-C*16:01, is the most commonly found haplotype in U.S. Hispanics (HF=0.02948).

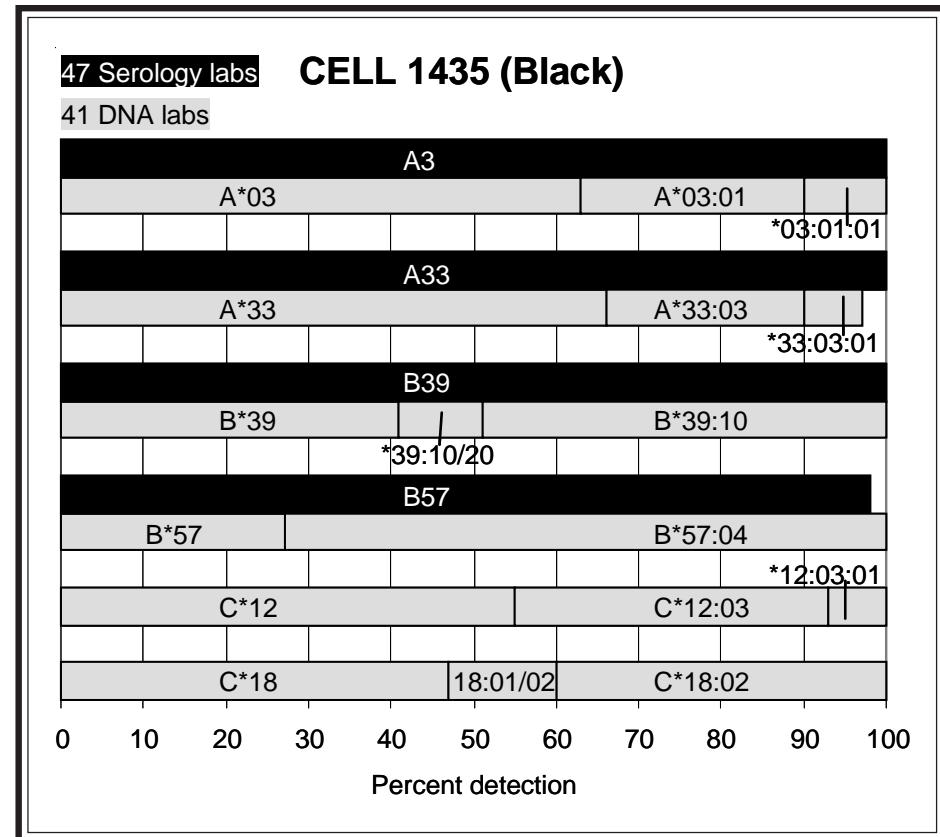

Cell 1435. This Black individual was previously typed multiple times in the Cell Exchange, as cells 1251 (2005), 1296 (2007), and 1335 (2008), as identified by Askar, Dunk, Fort, Lopez-Cepero, Mah, McCluskey, and Pancoska.

In this present retyping, B39 was assigned in complete agreement. Fort and Rubocki noted shorter than normal reactivity. B*39:10 was reported by 48%. Other B*39:10 exchange cells were cell 1045 (also cell 985, extracts 64 and 212) from a Black donor and extract 456 (also extract 283) from a Somalian individual.

B57 was assigned by 98% and confirmed as the rare B*57:04 (71%). This donor remains the sole B*57:04 typed in the Cell Exchange.

C*12:03 (45%) and C*18:02 (40%) were the C-locus alleles. Cw6 was assigned by 21%, which may be due to the presence of the C*18 allele. The detection level of C*18:02 attained in this retyping showed improvement from the 2008 level of 26%.

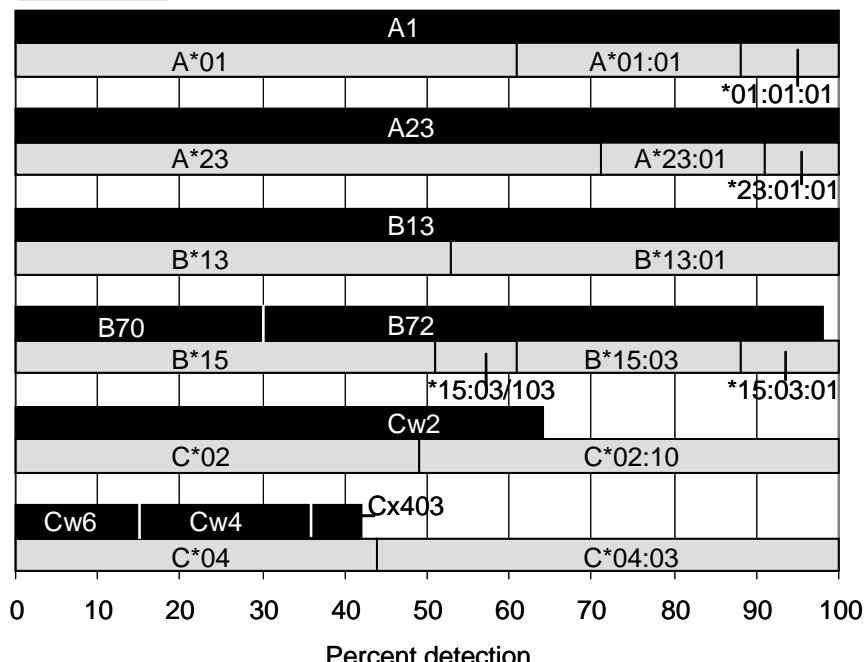

B*39:10-C*12:03 and B*57:04-C*18:02 were the probable associations in this cell.

47 Serology labs

CELL 1436 (Black)

41 DNA labs

Cell 1436. This cell from a Black donor was previously typed as cell 1412 (2010), as correctly identified by Dunk, Fort, Harville, Mah, McCluskey, and Pancoska.

In this present retyping, B72 (67%) was well detected, confirmed by 38% as B*15:03.

The other B-locus antigen was B13 (100%), corroborated as B*13:01 by 46%.

Assignments of Cw4 (23%) and Cw6 (15%) indicated the presence of the antigen, 'Cx403,' encoded by C*04:03 (55%).

Cw2 (65%) was the second C-locus antigen, validated as C*02:10 by 50%.

The probable haplotypes in this cell were A*23:01-B*15:03-C*02:10, commonly found in Black individuals, and A*01:01-B*13:01-C*04:03.
