

# REPORT OF THE 14TH UCLA INTERNATIONAL KIR EXCHANGE

FEBRUARY 6, 2008

KIR

53-56

Dear Colleagues:

We wish to congratulate all the participating labs for completion of the 2007 International KIR Exchange. For your records, a certificate is enclosed to document your participation. Congratulations!

For the 14<sup>th</sup> KIR Exchange, 4 DNA samples (KDNA#53-56) were shipped to each laboratory on August 8, 2007. Fifty-one laboratories submitted their KIR typing results. The majority of the laboratories used the commercial or in-house developed sequence-specific primer (SSP) based PCR typing systems, and the remaining laboratories used either a sequence-specific oligonucleotide probing (SSOP) method, or a multiplexed SSP method, or the MALDI-TOF/ SNP assay. The majority of the laboratories performed subtyping for 2DL5, 2DS4, and 3DP1.

The results for the 14<sup>th</sup> KIR Exchange are summarized in Table 1 and individual laboratory results reported for each DNA sample are provided in Tables 2-5. All four DNA samples were reported with discrepant results for at least four KIR loci. Particularly, the KIR2DL3 was reported with different results for all four DNA samples. KIR2DS1 was reported with dissimilar results for three DNA's and 2DS5 was reported with dissimilar results for two DNA samples. Of the sixteen KIR genes typed, only six genes (2DL1, 2DL4, 3DL2, 2DS2, 2DS3

and 3DP1) were reported with identical results (positive or negative) by all participating laboratories. The rest of the ten KIR genes, including a ubiquitously existing framework component 3DL3, were reported with inconsistent results. Discrepant results from the consensus typing are italicized in the listing of results (Tables 2-5), and described in the summation for each sample. Discrepancies at the allele level are not italicized. We encourage the participating laboratories to resolve the discrepancies so that the information can be shared to develop reliable KIR typing systems.

We thank for your active participation in this program. We wish a happy and prosperous new year to you.

Best regards,

Marie Lau, Elaine F. Reed, and Raja Rajalingam  
UCLA Immunogenetics Center  
Department of Pathology and Laboratory Medicine  
David Geffen School of Medicine

**KIR Exchange Sample: KDNA # 0053:**

The DNA was isolated from an Hispanic donor. The consensus KIR type of this sample is: 2DL1-2DL3-2DL4-2DL5A-3DL1-3DL2-3DL3-3DS1-2DS1-2DS4-2DS5-2DP1-3DP1. This is one of the most common genotypes identified in human populations studied to date (Yawata et al, 2002, Critical Rev Immunol 22:463).

However, seven laboratories reported results that were different from the consensus results of the following genes: KIR2DL3, 2DL5A, 3DL1, 3DS1, 2DS1, 2DS4 and 2DP1.

**KIR Exchange Sample: KDNA # 0054:**

The ethnic origin of this sample donor is unknown. The consensus KIR type of this sample is: 2DL1-2DL2-2DL4-3DL1-3DL2-3DL3-2DS2-2DS4-2DP1-3DP1.

This is a rare genotype reported only in Trinidad Asians at low frequency (Norman et al, 2002, Henes Immun 3:86-95). Two laboratories reported this DNA carrying the KIR2DL3 gene and another laboratory reported it as positive for KIR2DS1. Two other laboratories reported it as negative for either 3DL3 or 2DP1.

**KIR Exchange Sample: KDNA # 0055:**

KDNA#55 was obtained from a Black individual. The consensus KIR type of this sample is: 2DL1-2DL2-2DL3-2DL4-3DL1-3DL2-3DL3-2DS2-2DS4-2DP1-3DP1. This KIR genotype occurs commonly in Caucasian populations with a frequency of 10-15% (Yawata et al, 2002, Critical Rev Immunol 22:463). This DNA was typed by one laboratory as positive for 2DL5, by another laboratory as positive for 2DS5. Also, one laboratory typed it as negative for 2DL2 and by another as negative for 2DL3.

**KIR Exchange Sample: KDNA # 0056:**

This DNA sample was derived from a Caucasian individual. The consensus KIR type of this sample is: 2DL1-2DL2-2DL4-2DL5B-3DL1-3DL2-3DL3-2DS2-2DS3-2DS4-2DP1-3DP1. This is an infrequent genotype found in all populations with a frequency of 1-4% (Yawata et al, 2002, Critical Rev Immunol 22:463). Five laboratories reported it as positive for KIR3DS1, three laboratories reported it as positive for KIR2DL3, two laboratories reported it as positive for KIR2DS1 and another laboratory reported it as positive for the 2DS5 gene.

**Table 1. Summary of the 14th KIR Exchange (KDNA#53-56)**

**KEY for Table 1**

[ ] - number of labs reporting allele assignment/POS/NEG/NT

POS - Presence of gene

NEG - Absence of gene

NT - Not typed

italics - assignment different from consensus

**KEY for Tables 2-5**

italics - assignment different from consensus

SSP - Sequence-specific priming-based typing

SSOP - Sequence-specific oligonucleotide probing-based typing

RSSOP - Reverse Sequence-specific oligonucleotide probing-based typing

SBT - Sequencing-based typing
