

REPORT OF THE 44th UCLA INTERNATIONAL KIR EXCHANGE OCTOBER 16, 2017

KIR 173-176

For the 44th KIR Exchange, 4 DNA samples (KDNA#173 - 176) were shipped to 77 laboratories worldwide. KIR typing results were received from 75 of the laboratories.

The results for the 44th KIR Exchange are summarized in Table 1 and individual laboratory results reported for each DNA sample are provided in Tables 2 - 5. Subtyping results for 2DL4, 2DL5A/B, 3DL1, 2DS1, 2DS4, and 3DP1 loci were reported by some laboratories. The subtypes for 2DS4 and

3DP1 are denoted as FULL or DEL. Overall, good agreement was achieved among laboratories in the positive/negative assignments for all 4 DNA samples, as 11 tested KIR loci (KIR2DL4, 3DL1, 3DL2, 3DL3, 3DS1, 2DS1, 2DS2, 2DS3, 2DS5, 2DP1, and 3DP1) were reported without discrepancy. Discrepant results from consensus are italicized in tables 1 - 5 and described in the summation for each sample. Discrepancies at the allele level are not italicized.

KIR Exchange Sample: KDNA # 173:

The consensus KIR type for this sample from a Hispanic donor is KIR2DL1-2DL2-2DL3-2DL4-3DL1-3DL2-3DL3-2DS4FULL-2DP1-3DP1FULL&DEL. Several labs (Arnold, denHollander, Kusnierczyk, and Hartzman and Hurley, commented on the unusual haplotype present in this sample, as 2DL2 was present in the absence of 2DS2. In addition, Kusnierczyk noted "2DL2 was negative with Inno-train but positive with Ole-rup. The former test does not detect 2DL2*006 or 2DL2*013 whereas the latter detects both. Thus, there is a possibility that this individual possesses one of these extremely rare alleles." Two labs (1 SSO and 1 SSP) reported 2DL2 as negative. A few discrepancies were reported for this sample as 1 lab reported 2DL1 as negative and 2DL5 as positive. One other lab reported 2DL3 as negative instead of positive. Based on the presence or absence of genes and 2DL5 SBT, Hartzman and Hurley graciously provided the following haplotypes for this sample: cA01/cB02var with the absence of 2DS2 and tA01/tA01 (1). The genotype in this sample is observed in Caucasian Hispanics (0.8%) and in Singapore Malay populations (7.5%) (2).

KIR Exchange Sample: KDNA # 174:

The consensus KIR type for this sample is KIR2DL1-2DL3-2DL4-2DL5A-3DL1-3DL2-3DL3-3DS1-2DS1-2DS4DEL-2DS5-2DP1-3DP1DEL. No race information was available for this sample. One lab reported 2DL3 as negative instead of positive. Arnold noted this sample as appearing to have A+AB haplotypes. Hartzman and Hurley made similar observations, reporting the predicted haplotypes in this sample as cA01/cA01 and tA01/tB01 (1). The genotype present in this sample is observed across all populations, with the highest frequencies observed among the Purepecha (30.2%) and Tarahumara (41.5%) tribes of Mexico (3, 4).

KIR Exchange Sample: KDNA # 175:

The consensus KIR type for this sample from a Hispanic donor is KIR2DL1-2DL2-2DL4-2DL5A&B-3DL1-3DL2-3DL3-3DS1-2DS1-2DS2-2DS3-2DS4DEL-2DS5-2DP1-3DP1FULL&DEL. One lab reported this sample as negative for 2DL5 and 1 lab noted it as negative for 2DS4. Two labs reporting by SSP reported 2DL3 as positive, with Marsh providing the following observations: "It was noticed that the PCR-SSP targeting 2DL3 for sample #175 initially failed to yield a strong positive result, although this was rectified by increasing the DNA concentration in subsequent reactions. As such, it is hypothesised by this lab that this allele may be rare or novel. We will attempt to use our NGS pipeline to investigate further." Hartzman and Hurley predicted the haplotypes in this sample to be either cB01/cB02 or cB01 and tA01/tB01 (1). The genotype in this sample is observed in Caucasian Hispanics (1.6%). It also observed in Asian Indian populations, with the highest frequencies observed among the Parisi (8%) and the Paravar (7.8%) (5).

KIR Exchange Sample: KDNA # 176:

The consensus KIR type for this sample from a donor of Filipino descent is KIR2DL1-2DL2-2DL3-2DL4-2DL5B-3DL1-3DL2-3DL3-2DS2-2DS3-2DS4DEL-2DP1-3DP1DEL. Hartzman and Hurley detected the presence of a possible new 2DL5B*00201 variant in this sample, noting the new allele was detected by SBT, "Exon2 nucleotide 61 A to C, In Codon -1 ACA to CCA, Amino acid T to P." Only a single discrepancy was reported for this sample, as 1 lab reported 2DS4 as negative. Predicted haplotypes reported by Hartzman and Hurley were cA01/cB01 and tA01/tA01 (1). Arnold reported similar observations, noting the possible haplotypes present appear to be A+AB. The genotype in this sample is observed in Southeast Asian populations, with the highest frequency observed among the Tokelau (17%). It is also observed in African populations with the highest frequency observed among Senegal African populations (17%) (6).

KEY for Table 1

[] - number of labs reporting allele assignment/POS/NEG/NT
 POS - Presence of gene
 NEG - Absence of gene
 NT - Not typed
italics - assignment different from consensus
 Subtypes of 2DS4 and 3DP1 are designated as FULL and/or DEL

KEY for Tables 2-5

italics - assignment different from consensus
 NGS - Next-generation sequencing
 RT-PCR - Real-time PCR
 SSO - Sequence-specific oligonucleotide probe based typing
 SSP - Sequence-specific primer-based typing
 SBT - Sequencing-based typing
