

Report of the 14th Flow and Virtual Crossmatch Exchange

August 14, 2018

Cells	79-80
Serum	81-84

For the 14th Flow and Virtual Crossmatch Exchange, Serum 77 (patient 1) and virtual donor V3 from Flow Crossmatch Exchange 13 (June 2018) were re-examined as serum 81 and cell 79. A comparison of virtual crossmatch (VXM) predictions (serum 77 vs. V3) against the physical flow crossmatch (FXM) (**serum 81 vs. cell 79**) are summarized in **Part 1** of this report.

Part 2 examines the single antigen data for the 4 sera examined (**serum nos. 81 - 84**) in this study. **Part 3** summarizes the flow crossmatch results for 2 cells (**cell nos. 79 - 80**) against the 4 sera. Finally, in **Part 4**, the virtual crossmatch predictions for 4 potential donors (V1 - V4) against 2 sera (serum 83 and serum 84) are examined.

Part 1

Physical Flow Cytometric Crossmatch vs. Virtual Crossmatch

Among the 25 labs submitting VXM predictions for serum 77 vs. donor V3 in Exchange 13, 20 reported back physical T-cell FXM results and 19 reported back physical B-cell FXM results for the patient-donor pair (**serum 81 vs. cell 79**) in Exchange 14 (Table 1a). T-cell FXM results among labs were consistent with predictions, as 19 labs reported the T-cell FXM as positive in agreement with predictions (Table 1b). One lab reported the T-cell FXM as borderline. B-cell FXM results, on the other hand, were mixed

among labs. Twelve of the 16 labs predicting the B-cell FXM to be positive reported the actual B-cell FXM as positive, 2 reported it as negative, and 2 reported borderline results (Table 1b). Meanwhile, 2 of the 4 labs which had predicted the B-cell FXM to be negative (due to the absence of class II DSA), reported the actual B-cell FXM as positive (Table 1). The discordance illustrates the need to consider both class I and class II DSA when predicting the expected B-cell FXM, as both class I and class II antigens

Table 1a. Summary of Physical Flow crossmatch results vs. Virtual Crossmatch predictions - Direct comparison

Exchange 013					Exchange 014				
Virtual Crossmatch - Serum 77 (Patient 1) vs. Donor V3					Physical Flow Crossmatch - Serum 81 vs. Cell 79

	∅	1			2	2	

+ = positive

- = negative

∅ = uncertain/not typed

n = number of labs

are expressed on B-cells.

Regarding DSA results on the replicate sera (serum 77), the reporting of specificities and strength were consistent across the 2 studies (Table 1c). In Exchange 13, anti-A23 and -Cw7 reactivity was reported, with respective median MFI = 14048 and 12571. In Exchange 14, anti-A23

(13879) and -Cw7 (14044) reactivity was re-reported against the donor. Although 3 labs reported the presence of weak class II DSA with their virtual B-cell predictions, all 20 labs in Exchange 14 reported no class II DSA were present against the donor for the physical B-cell FXM.

Table 1c. Individual Physical Flow Crossmatch results vs. Virtual Crossmatch predictions - Direct Comparison

Part 2

Class I and class II Luminex single antigen results for serum samples 81 - 84 are summarized in Tables 12 - 15 and individual results for each

participating laboratory are listed in Tables 16 -21.

Antibody Identification

Serum 81 was previously examined as serum 77 (Exchange 13). In this present study, reactivity to a number of 1C (A1, A23, A24, A36, A80), 5C (B73, B76, B18, B71, B75), 7C (B7, B8, B54, B55, B59, B67), and 10C (A25, A26, A34, A43) specificities was reported once again with $\geq 90\%$ consensus. Median MFI values were also consistent across the 2 studies, ranging from 4671 to 20846 in Exchange 14, compared to 5460 to 22242 in Exchange 13. Additional reactivity to B65 (5661), Cw7 (14044), Cw18 (10849), and DQ2 (5243) was also reported again. Reactivity to DQ2 (5243) was reported by 20/20 labs.

Strong class I DSA were reported against cell 79 and cell 80. Against cell 79, the majority of labs (n=18) reported reactivity to A23 (13879). In addition, 7 labs also reported anti-Cw7 (14044) reactivity against cell 79. For cell 80, labs were in agreement in the reporting of strong anti-A34 (15114), -A11 (A1101)(12212), and -B75 (4967) reactivity against the cell. No class II DSA were reported against either cell 79 or cell 80.

Serum 82 was found to be broadly reactive to a number of specificities, including A25, A32, B38, A23, A24, as well as reactivity to a number of 5C (B35, B46, B49, B50, B51, B52, B53, B57, B58, B62, B63, B71, B72, B75, B77), 7C (B13, B47, B56, B59), and 12C (B37, B41, B44, B45, B60, B61) specificities. Each were reported by $\geq 90\%$ consensus. Class II antibodies reported by a consensus of $\geq 90\%$ were DR11 (4738), DR17 (4372), DR18 (3755), and DR52 (12618).

Good agreement was achieved in the assignment of DSA against cell 79 and cell 80. Against cell 79, 18/18 labs reported anti-B49 (22933) and -DR52 (12618) reactivity. In addition, 17 labs reported anti-B44 (13282) reactivity and 15 reported additional reactivity to A23 (5558) against cell 79. Good agreement was also achieved in the reporting of class I DSA against cell 80, as 17/17 labs reported reactivity to B75 (15877). No class II DSA were reported against this cell.

Genotypes of cells provided by UCLA

Cell 79 (Caucasian) -

A*02:01:01-A*23:01:01-B*44:03:01-B*49:01:01-C*04:01:01-C*07:01:01/DRB1*08:01-DRB1*13:02:01-DRB3*03:01-DQA1*01:02:01G-DQA1*04:01-DQB1*04:02:01-DQB1*06:04:01-DPB1*02:01:02G-DPB1*04:02:01G

Cell 80 (Filipino) -

A*11:01-A*34:01-B*15:02-B*15:21-C*04:03-C*08:01:01G/DRB1*15:02-DRB5*01:01-DQA1*01:02:01G-DQB1*05:02-DPB1*01:01:01G-DPB1*05:01:01G

For **Serum 83**, reactivity to A2, A68, A69, Cw18, Cw2, Cw6, as well as reactivity to a number of 5C specificities (B57, B62, B63, B75, B76, B58, B72, B77, B46, B49, B50, B71) was reported by a consensus of $\geq 90\%$. MFI values for the specificities ranged from 3543 to 12945. Reactivity to DQ8 (7128), DR4 (12189), DQ9 (7180), and DR53 (4740) was also reported by $\geq 90\%$ of labs.

Class I and class II DSA were reported against cell 79 and cell 80. Against cell 79, strong reactivity to A2 (12945) was reported in complete consensus. In addition, a few labs also reported weak anti-B49 (3755) and anti-Cw4 (3095) reactivity, along with weak anti-DQ4 (3185) and -DQ6 (4125) reactivity. Good agreement was also achieved in the reporting of class I DSA against cell 80, as 17/17 labs reported reactivity to B75 (5265). Additional weak anti-Cw4 (3095) reactivity was reported by a few labs. Less agreement was observed among labs in the reporting of class II DSA against cell 80, as 9 labs reported weak reactivity to DQ5 (2296), while 8 others indicated no class II DSA were present.

For **Serum 84**, reactivity to Cw6, Cw15, and DQ7, as well as reactivity to a number of 5C specificities (B35, B45, B49, B50, B51, B62, B63, B56, B57, B62, B63, B71, B72, B75) was reported in complete consensus. MFI values for the specificities ranged from 9062 - 20551. In addition, reactivity to B18, B37, B77, Cw17, Cw18, Cw2, Cw4, and Cw5 was reported by 95% of labs, with MFI values for these specificities ranging from 3587 - 18829.

Good agreement was achieved among labs in the reporting of class I DSA against cell 79 and cell 80, as 18/18 labs reported strong anti-B49 (12626) reactivity against cell 79, and 17/17 labs reported strong anti-B75 (14005) reactivity against cell 80. Additional reactivity to Cw4 (11169) was also reported against each cell. No class II DSA were reported against either cell 79 or cell 80.

Conclusion:

All 4 sera in this study were strongly reactive to a broad range of specificities, including a number of 5C and C-locus specificities. Median MFI values for antibodies reported by 100% consensus ranged from 5265 - 22933 for class I antibodies and 3755 - 11386 for class II antibodies.

Good agreement was observed among labs in the reporting of class I DSA against cell 79 and cell 80, as MFI values for peak class I DSA ranged from 5265 to 22933 across the 4 sera. For class II, good agreement was observed when MFI values for class II DSA were > 4000 . When DSA strength fell below 4000, greater variability was observed in the reporting of class II DSA as some labs reported DSA and others did not.

Part 3

Flow cytometric crossmatch results for cell 79 and cell 80 against sera sample nos. 81 - 84 are summarized in Table 2. Individual results for each

laboratory, along with reported class I and class II DSA for each sera, are listed in tables 4 - 11.

Flow Cytometric Crossmatch

Cell 79. Against serum samples 81 - 84, good agreement ($\geq 80\%$) was achieved among labs in the reporting of T-cell FXM results. Each was reported as positive in the presence of strong class I DSA (MFI > 12000). For the B-cell FXM, good agreement was observed for 3 out of 4 crossmatches. Each was reported as positive in the presence of class II and/or class I DSA. Against serum 81, however, no agreement was achieved as 14 labs reported the B-cell FXM as positive, 3 reported it as negative, and 3 reported it as borderline.

Cell 80. Good agreement ($\geq 80\%$) was achieved for the T- and B-cell crossmatches against serum samples 81 - 84. All 4 T-cell crossmatches were reported as positive, as strong class I DSA (MFI > 14000) were present in each case. Consequently, all 4 B-cell crossmatches were also reported as positive due to the class I DSA present, as only weak anti-DQ5 (2296) reactivity was detected in serum 83, and no class II DSA were reported against the 3 remaining sera.

Table 2. Summary of Flow crossmatch results for Cell #079-#080 vs. Serum #081-#084

Cell no.	Serum no.	#Labs	T-cell Results	B-cell Results	Cell no.	Serum no.	#Labs	T-cell Results	B-cell Results
79	81	22	POS(21) Borderline(1)	POS(14) NEG(3) Borderline(3) NT(2)	80	81	22	POS(21) NT(1)	POS(18) NEG(1) NT(3)
79	82	22	POS(22)	POS(20) NT(2)	80	82	22	POS(21) NT(1)	POS(18) NEG(1) NT(3)

79	84	22	POS(22)	POS(19) Borderline(1) NT(2)	80	84	22	POS(21) NT(1)	POS(19) NT(3)

agreement <80%

Conclusion:

For each cell, the presence of strong class I DSA resulted in good agreement among labs in the reporting of the T-cell FXM. The same was true for the B-cell FXM. In the case of cell 79 against serum 84, and cell 80 against serum samples 81, 82, and 84, no class II DSA were detected. However, the B-cell FXM was still overwhelmingly reported as positive, as labs reported MFI values ranging from 12626 to 15877 for the class I DSA detected.

Interestingly, for the B-cell FXM of cell 79 against serum 84 in which no

agreement was achieved, we would have expected more labs to have reported a positive B-cell FXM. Although no class II DSA were detected against cell 79, multiple class I DSA (A23, Cw7) were reported, with respective MFI = 13879 and 14044. By comparison, for cell 79 vs. serum 84, no class II DSA were detected as well, only class I DSA to B49 (12626) and Cw4 (11169). All but 1 lab, reported the FXM as positive, with some labs reporting B-cell MCS values above 300. For cell 79 vs. serum 81, the majority of labs reported B-cell MCS values below 200.

Part 4

Virtual crossmatch predictions for donor V1 - V4 against sera (patient) samples 83 and 84 are summarized in Table 3 and individual laboratory

predictions are listed in Tables 22 - 29. Fictional donor histories precede each patient-donor summary.

Virtual Crossmatch Paper Challenge

For the virtual **T-cell crossmatch**, good agreement ($\geq 80\%$) was observed for 7 out of 8 VXM pairs. Among the 7 pairs achieving good agreement, 6 were reported in complete consensus as positive in the presence of strong class I DSA (MFI > 7000). For **donor V3 vs. serum 84**, 22 labs predict the T-cell FXM to be positive, and 2 predict the results to be borderline. The 2 labs predicting borderline results, reported weak anti-58 (3404) reactivity against donor V3. Labs predicting the T-cell FXM to be positive reported stronger anti-B58 (9062) reactivity. Lastly for **donor V3 vs. serum 83**, no agreement was achieved among labs as 19 labs predict the T-cell FXM to be positive, 4 labs predict it to be borderline, and 1 lab predicts it to be negative. Weak class I DSA (MFI < 5000) were reported against the donor, which may have resulted in the variability observed in the predictions.

For the virtual **B-cell crossmatch**, good agreement ($\geq 80\%$) was observed for 5 out of 8 VXM pairs. All 5 pairs achieving good agreement were

reported as positive in the presence of class I and class II DSA. For **donor V2 vs. serum 84**, 17 labs predict the B-cell FXM to be positive, while 6 predict it to be negative. No class II DSA were reported against donor V2, only class I DSA (B51, Cw2), with respective MFI = 17207 and 13496. For **donor V3 vs. serum 84**, 18 labs predict the B-cell FXM to be positive, 4 predict it to be negative and 2 predict borderline results, as anti-B58 (9062) and -Cw10 (6714) reactivity were reported against donor V3. All but 2 labs, reported there were no class II DSA against the donor. Finally for **donor V4 vs. serum 84**, 18 labs predict the B-cell FXM to be positive and 5 predict it to be negative. Once again, no class II DSA were detected against the donor, only class I DSA (B57, Cw4), with respective MFI = 9685 and 11169.

Reminder: both class I and class II DSA should be taken into consideration when predicting the expected physical B-cell FXM, as B-cells express both class I and class II antigens.

DSA Identification

Patient 1 (Serum 83)

Patient's fictional case history: This individual is a 56 year old male being evaluated for his second transplant. The patient's HLA type is A1-A33-B8-B60-Cw7-Cw10/DR17-DR52-DQ2-DP1. The HLA typing of his first transplant is A1-A32-B8-B61-Cw7-Cw9/DR12-DR17-DR52-DQ2-DQ7-DP1.

For serum 83 (patient 1), class I and class II DSA were reported against **donor V1**, with labs reporting reactivity to A68 (7230), Cw6 (5515), and DQ6 (4125). Weak anti-B53 (2037) reactivity was also reported by a number of labs ($n = 15$). The presence of multiple class I DSA with MFI > 5000 resulted in 100% of labs to predict the T-cell FXM for this patient-donor pair to be positive. For B-cell predictions, 22 labs predict the expected B-cell FXM to be positive and 2 predict it to be negative. The 2 labs predicting a negative B-cell FXM, noted no class II DSA were present. In line with T-cell predictions, all 24 labs assess the renal transplant risk for this donor-patient pair unacceptable.

Multiple DSA were reported against **donor V2**, with labs detecting strong anti-A2 (12945) reactivity, along with reactivity to DQ6 (4125). A number of labs ($n = 21$) also reported additional anti-Cw2 (5418) and -B51 (2662) reactivity against the donor. In the presence of strong class I DSA, (MFI >12000), all 24 labs predict the expected T-cell FXM for this patient-donor pair to be positive. Good agreement was also observed for virtual B-cell predictions, as all but 1 lab predict the expected B-cell FXM to be positive. As a result of the positive T- and B-cell predictions, predicted renal transplant risk was assessed to be unacceptable in complete consensus.

Class I and class II DSA were detected against **donor V3**, as labs reported reactivity to B58 (4530) and DR4 (11386). Additional weak anti-B55 (1269) reactivity was reported by a few labs ($n = 9$) against the donor. As a consequence of the weak class I DSA present, no agreement was achieved for T-cell predictions for this patient-donor pair, as 19 labs predict the T-cell FXM to be positive, 4 predict it to be borderline, and 1 predicts it to be negative. By contrast, good agreement was achieved for B-cell predictions, as the presence of strong class II DSA (MFI > 11000) resulted in 23/24 labs to predict the expected B-cell FXM to be positive. The 1 lab predicting a negative B-cell FXM, reported there were no class II DSA present. For renal transplant risk, 23/24 labs assess the risk as unacceptable.

Strong anti-A2 (12945) and -B57 (6689) reactivity, along with weak anti-DQ6 (4125) reactivity was reported against **donor V4**. In addition, weak reactivity to Cw4 (3095) and B35 (2342) was reported by some labs. The presence of strong class I DSA (MFI >12000) resulted in 24/24 labs to predict the T-cell FXM for this patient-donor pair to be positive. Good agreement was achieved for B-cell predictions as well, as 22/24 predict the expected B-cell FXM to be positive. Predicted renal transplant risk assessment was reported as unacceptable in complete consensus.

Virtual Donors – HLA genotype

Donor 1 (V1): A*66:01-A*68:02-B*14:02-B*53:01-C*06:02:01G-C*08:02-DRB1*13:02-DRB1*13:03-DRB3*01:01-DRB3*03:01-DQA1*01:02:01G-DQA1*05:01:01G-DQB1*03:01:01G-DQB1*06:04:01G-DPB1*04:01-DPB1*17:01:01G

Donor 2 (V2): A*02:01-A*26:01-B*27:05-B*51:08-C*02:02-C*16:02-DRB1*13:01:01-DRB1*15:01:01-DRB3*01:01:02-DRB5*01:01:01-DQA1*01:02:01G-DQA1*01:03-DQB1*06:02:01-DQB1*06:03:01-DPB1*04:01:01

Patient 2 (Serum 84)

Patient's fictional case history: This individual is a 29 year female being evaluated for her first transplant. The HLA type of the patient is A1-A24-B8-Cw7/DR8-DR17-DR52-DQ2-DQ4-DRP1-DRP4. Patient has had 1 prior pregnancy. The HLA type of the child is A2-A24-B8-Cw7/DR17-DR52-DQ2-DRP1-DRP4.

For serum 84 (patient 2), strong class I and class II DSA were reported against **donor V1**, as labs reported anti-B53, -Cw6, and -DQ7 reactivity, with respective MFI = 16179, 14604, and 10938. In the presence of DSA with MFI > 10,000, good agreement was achieved for both T- and B-cell predictions for this patient-donor pair; 24/24 labs predict the T-cell FXM to be positive and 21/22 labs predict the expected B-cell FXM to be positive. The 1 lab predicting a negative B-cell FXM did not report class II DSA against the donor. Predicted renal transplant risk assessments were in line with predictions, with 100% of labs assessing the risk as unacceptable.

Class I DSA were reported against **donor V2**, with labs reporting anti-Cw2 (13496) reactivity. Possible DSA to B51 (17207) was also reported by some labs, however several other labs noted the donor's B*51:08 is not on the SAB panel, and therefore cannot be assessed. No class II DSA were reported against donor V2. Virtual T-cell predictions were reported as positive by 100% of labs in the presence of strong class I (MFI > 17000) DSA. However, no agreement was achieved for B-cell predictions despite the strong class I DSA present, as 17 labs predict the expected B-cell FXM to be positive and 6 predict it to be negative. Predicted transplant risk assessments were reported as unacceptable in complete consensus.

Class I DSA (B58) were reported against **donor V3**, with median MFI = 9062. Additional reactivity to Cw10 (6714) was also reported by 17 labs. No class II DSA were reported against the donor. The T-cell predictions for this patient-donor pair were reported as positive by 22/24 labs. The remaining 2 labs predict the expected T-cell FXM to be borderline. By contrast, B-cell predictions were mixed among labs, as 18 labs predict the expected B-cell FXM to be positive, 4 predict it to be negative, and 2 predict it to be borderline. The 2 labs predicting borderline results, reported class I DSA with weaker (< 6000) MFI values. In line with T-cell predictions, renal transplant risk assessments were reported in complete agreement as unacceptable.

Against **donor V4**, only class I DSA (Cw4, B57) were reported, no class II. Respective MFI values for each were reported as 11169 and 9685. Labs were in agreement in the reporting of T-cell predictions, with all 24 labs predicting the T-cell FXM to be positive. However, there was a lack of agreement among B-cell predictions, as 18 labs predict the expected B-cell FXM to be positive and 5 predict it to be negative. Each of the labs predicting the B-cell FXM to be negative did so despite reporting the presence of strong class I DSA. For renal transplant risk assessment, each lab reported the risk as unacceptable.

Conclusion

In this study, good agreement was observed among labs in the reporting of positive T-cell predictions when the MFI strength of the DSA was above 7000. As DSA strength decreased (MFI < 7000), labs tended to predict the expected T-cell FXM to be either borderline or negative. For B-cell predictions, however, variability was still observed among labs, even when the class I DSA present was strong (MFI > 9000). This is likely due to a misunderstanding of the Paper Challenge. To clarify, the purpose is to predict the *expected* physical B-cell FXM. Therefore, B-cell predictions must take into account both class I and class II DSA.

The predicted risk assessment for all 8 patient-donor pairs in this study were reported as unacceptable. Strong class I DSA in each case resulted in good agreement among lab assessments. Only 1 discrepancy was observed, as 1 lab reporting the risk as acceptable for serum 83 vs. donor V3 did not report class I DSA against the donor, only class II DSA (DR4) of

moderate strength (5130).

In general, labs were consistent in the reporting of cPRA (calculated panel reactive antibodies) values for serum 83 and 84. For serum 83, the majority of labs reported cPRA values of 87% or higher, with 15 labs reporting cPRA values of ≥ 98%. Serum 83 was broadly reactive to a number of antibodies, including 5C and 7C specificities. Interestingly, 3 labs reported cPRA values below 68%. For serum 84, a similar pattern was observed, with the majority of labs reporting cPRA values of 84% or higher, and 3 labs reporting values below 54%. Class I and class II DSA were detected in the sample. The variability observed in the reporting of cPRA values may be due to labs using different criteria for determining cPRA values. While some labs base the calculation on all unacceptable antibodies detected in the sera, others may only consider the DSA specifically directed against an individual donor.

3224	84	84	Positive	Cw6 (13378) B53 (16259)	Positive	DQ7 (11902)	Unacceptable	Cannot evaluate DSA to C*08:02
3753	84	94.81	Positive	Cw6 (15458) B53 (16473)	Positive	DQ7 (7963)	Unacceptable	We recommend to decline this donor offer.
3966	84	95	Positive	Cw6 (14441) B53 (14478)	-	DQ7 (7470) DQA1*05 (9983)	Unacceptable	
4661	84	89	Positive	Cw6 (6416) B53 (7722) A68 (124) B65 (131)	Positive	DR13 (157) DR52 (278) DQ7 (2481)	Unacceptable	
4985	84		Positive	Cw8 (146) A6601 (95)	Positive	DQ6 (99) DP17 (84) DP401 (23)	Unacceptable	Epitope 163Lw,44RT,80K; Epitope 45EV
8001	84	98	Positive	Cw6 (15678) B53 (14066)	Positive	DQ7 (11351)	Unacceptable	
				Cw6 (15706) B53 (19295)	Positive	DQ7 (14317)	Unacceptable	Cannot rule out DSA against C*08:02 (Not in LSAB panel); Cannot rule out DSA against DRB1*13:02 (Not in LSAB panel)
8035	84	92	Positive	Cw6 (18637) B53 (22942)	Positive	DQ7 (11118)	Unacceptable	As per our program, this is unacceptable- However, some programs may have other options as desensitization--if they can make sure the DSAs are not Complement binding. Our B cell Positivity is based on both Class I and II DSA.
8050	84	95	Positive	Cw6 (14887) B53 (10359)	Positive	DQ7 (10054)	Unacceptable	
8079	84	100	Positive	Cw6 (12173) B53 (14180)	Positive	DQ7 (8000) DQA1*05 (9900)	Unacceptable	
8080	84	97	Positive	Cw6 (19782) B53 (18586)	Positive	DQ7 (14391)	Unacceptable	
8083	84	99	Positive	Cw6 (13792) B53 (16425)	Positive	DQ7 (11344)	Unacceptable	Also B53 and Cw6 which are expressed on B cells
8096	84		Positive	Cw6 (1771) A66 (1263) B53 (2273) A68 (2200) B65 (2135) Cw8 (1862)	Positive	DR13 (209) DQ7 (453) DP17 (1183)	Unacceptable	
8103	84	27	Positive	Cw6 (1170) B53 (2316)	Positive	No class II DSA	Unacceptable	Class 1 antibody positivity
8107	84	95	Positive	Cw6 (11804) B53 (12659)	Positive	DQ7 (8516)	Unacceptable	DQA1*05:01,DQB1*03:01 (DQ7) is not in panel. Average DQ7 MFI=8516.
8109	84	96	Positive	Cw6 (14531) B53 (16725)	Positive	DQ7 (12513)	Unacceptable	

Table 27. Individual Virtual crossmatch results for Serum #84 vs Donor #V2

Donor #V2: A*02:01-A*26:01-B*27:05-B*51:08-C*02:02-C*16:02-DRB1*13:01:01-DRB1*15:01:01-DRB3*01:01:02-DRB5*01:01:01-DQA1*01:02:01G-DQA1*01:03-DQB1*06:02:01-DQB1*06:03:01-DPB1*04:01:01

Center	Patient	CPRA	Virtual T Cell Prediction	Class I DSA (MFI)	Virtual B-cell prediction	Class II DSA (MFI)	Risk Assessment	Comments
54	84	97	Positive	Cw2 (17365)	Negative	No class II DSA	Unacceptable	
206	84	87%	Positive	B51 (18137)	Positive	No class II DSA	Unacceptable	
230	84	20	Positive	B51 (21592) Cw2 (16598)	Positive	No class II DSA	Unacceptable	
774	84	93	Positive	B51 (2303) Cw2 (6003)	Negative	No class II DSA	Unacceptable	
792	84	95	Positive	B51 (17311) Cw2 (13682)	Positive	No class II DSA	Unacceptable	Class II positivity due to Class I DSA
836	84	98	Positive	Cw2 (15562) Cw16 (22676)	Positive	No class II DSA	Unacceptable	B*51:08 cannot be assessed. T/B reported together with 1000 MFI as positive cut off.
1160	84	95%	Positive	B51 (14183) Cw2 (12688)	Positive	No Class II DSA	Unacceptable	B*51:08 is not included in the panel
1461	84		Positive	B51 (3826) Cw2 (2685)	Negative	No Class II DSA	Unacceptable	
2400	84	95%	Positive	Cw2 (14407)	NT	No Class II DSA	Unacceptable	Class I (HLA -A and -B) is usually higher on B cells than T cells, not sure about density of HLA -C on B cells.
3224	84	84	Positive	B51 (16447) Cw2 (12696)	Positive	No class II DSA	Unacceptable	Presence of the strong DSA to Cw2 may cause a positive crossmatch. A physical crossmatch is recommended.
3753	84	94.81	Positive	B51 (17357) Cw2 (15239)	Positive	No class II DSA	Unacceptable	We recommend to decline this donor offer.
3966	84	95	Positive	Cw2 (11799)	Negative	No class II DSA	Unacceptable	
4661	84	89%	Positive	A2 (64) B27 (173) B51 (6194) A26 (128)	Positive	DR13 (157) DR15 (149) DR51 (108) DR52 (278) DQ6 (104) DP401 (137)	Unacceptable	Epitope 163Lw,44RT,80K
4985	84	34	Positive	B51 (16466) Cw2 (12668)	Positive	No class II DSA	Unacceptable	
8001	84	98%	Positive	Cw2 (13626)	Positive	No class II DSA	Unacceptable	Cannot rule out DSA against B*51:08, C*16:02 (Not in LSAB panel)
8035	84	92%	Positive	Cw2 (17252)	Positive	No class II DSA	Unacceptable	Strong Cw2 DSA detected. Very strong potential DSA to B*51:08 exists as strong AB to B51 were detected (22,595). But no SAB is available. Possibility of an anamnestic response to the donor's A2 antigen exists as well. Our B cell Positivity based mainly on the Class I DSA; recommend real crossmatches be performed.
8050	84	95%	Positive	B51 (11777) Cw2 (14030)	Positive	No class II DSA	Unacceptable	Due to Class I
8079	84	100	Positive	Cw2 (12000)	Negative	No class II DSA	Unacceptable	
8080	84	97	Positive	B51 (20775) Cw2 (19889) Cw16 (16944)	Positive	No class II DSA	Unacceptable	
8083	84	99	Positive	Cw2 (13496)	Positive	No class II DSA	Unacceptable	Cw2 which is expressed on B cells
8096	84		Positive	A2 (3216) B27 (1909) Cw2 (1409)	Negative	No class II DSA	Unacceptable	
8103	84	27	Positive	B51 (2316) Cw2 (1916)	Positive	No class II DSA	Unacceptable	Class 1 antibody positivity
8107	84	95	Positive	B51 (13334) Cw2 (11305)	Positive	No class II DSA	Unacceptable	B*51:08 is not in panel. Average B51 MFI=13334. Overall cumulative MFI= 20000; However, cumulative MFI = 20000
8109	84	96.43%	Positive	B51 (17689) Cw2 (12919)	Positive	No class II DSA	Unacceptable	

Table 28. Individual Virtual crossmatch results for Serum #84 vs Donor #V3

Donor #V3: A*11:01:01-A*33:03:01-B*55:02:01-B*58:01:01-C*01:02:01-C*03:02:02-DRB1*03:01:01-DRB1*04:05:01-DRB3*02:02:01-DRB4*01:03:01-DQA1*03:03:01-DQA1*05:01:01-DQB1*02:01:01-DQB1*04:01:01- DPB1*05:01:01-DPB1*14:01:01:03:01-DPB1*04:01:01
