

Bridging the Gap: Cognitive Decline and the Role of the Primary Care Provider

Michael Baham, MD
UCLA Family Medicine
Residency

By the end of this session, you will be able to:

- 1. Identify when and how to screen for cognitive impairment in older adults**
- 2. Describe an appropriate initial workup in the outpatient setting**
- 3. Recognize when referral to specialists is appropriate and needed**
- 4. Discuss key counseling points on safety, driving, and caregiver support**

- 7 million+ Americans live with Alzheimer's disease or some form of cognitive impairment
- Up to 60% of cases are not recognized or formally diagnosed in primary care settings
- Incidence and prevalence increase with age
 - Higher prevalence among African Americans and Latinx patients
- Early identification allows:
 - Planning for care
 - Addressing reversible causes
 - Slowing decline

- Mild cognitive impairment: Cognitive impairment with minimal or no impairment in instrumental activities of daily living (IADLs), while basic activities of daily living (BADLs) are preserved
- Dementia: Cognitive impairment that is severe enough to interfere with independence in daily activities, including IADLs and BADLs

What's the difference between ADLs and IADLs?

Activities of daily living (ADLs)

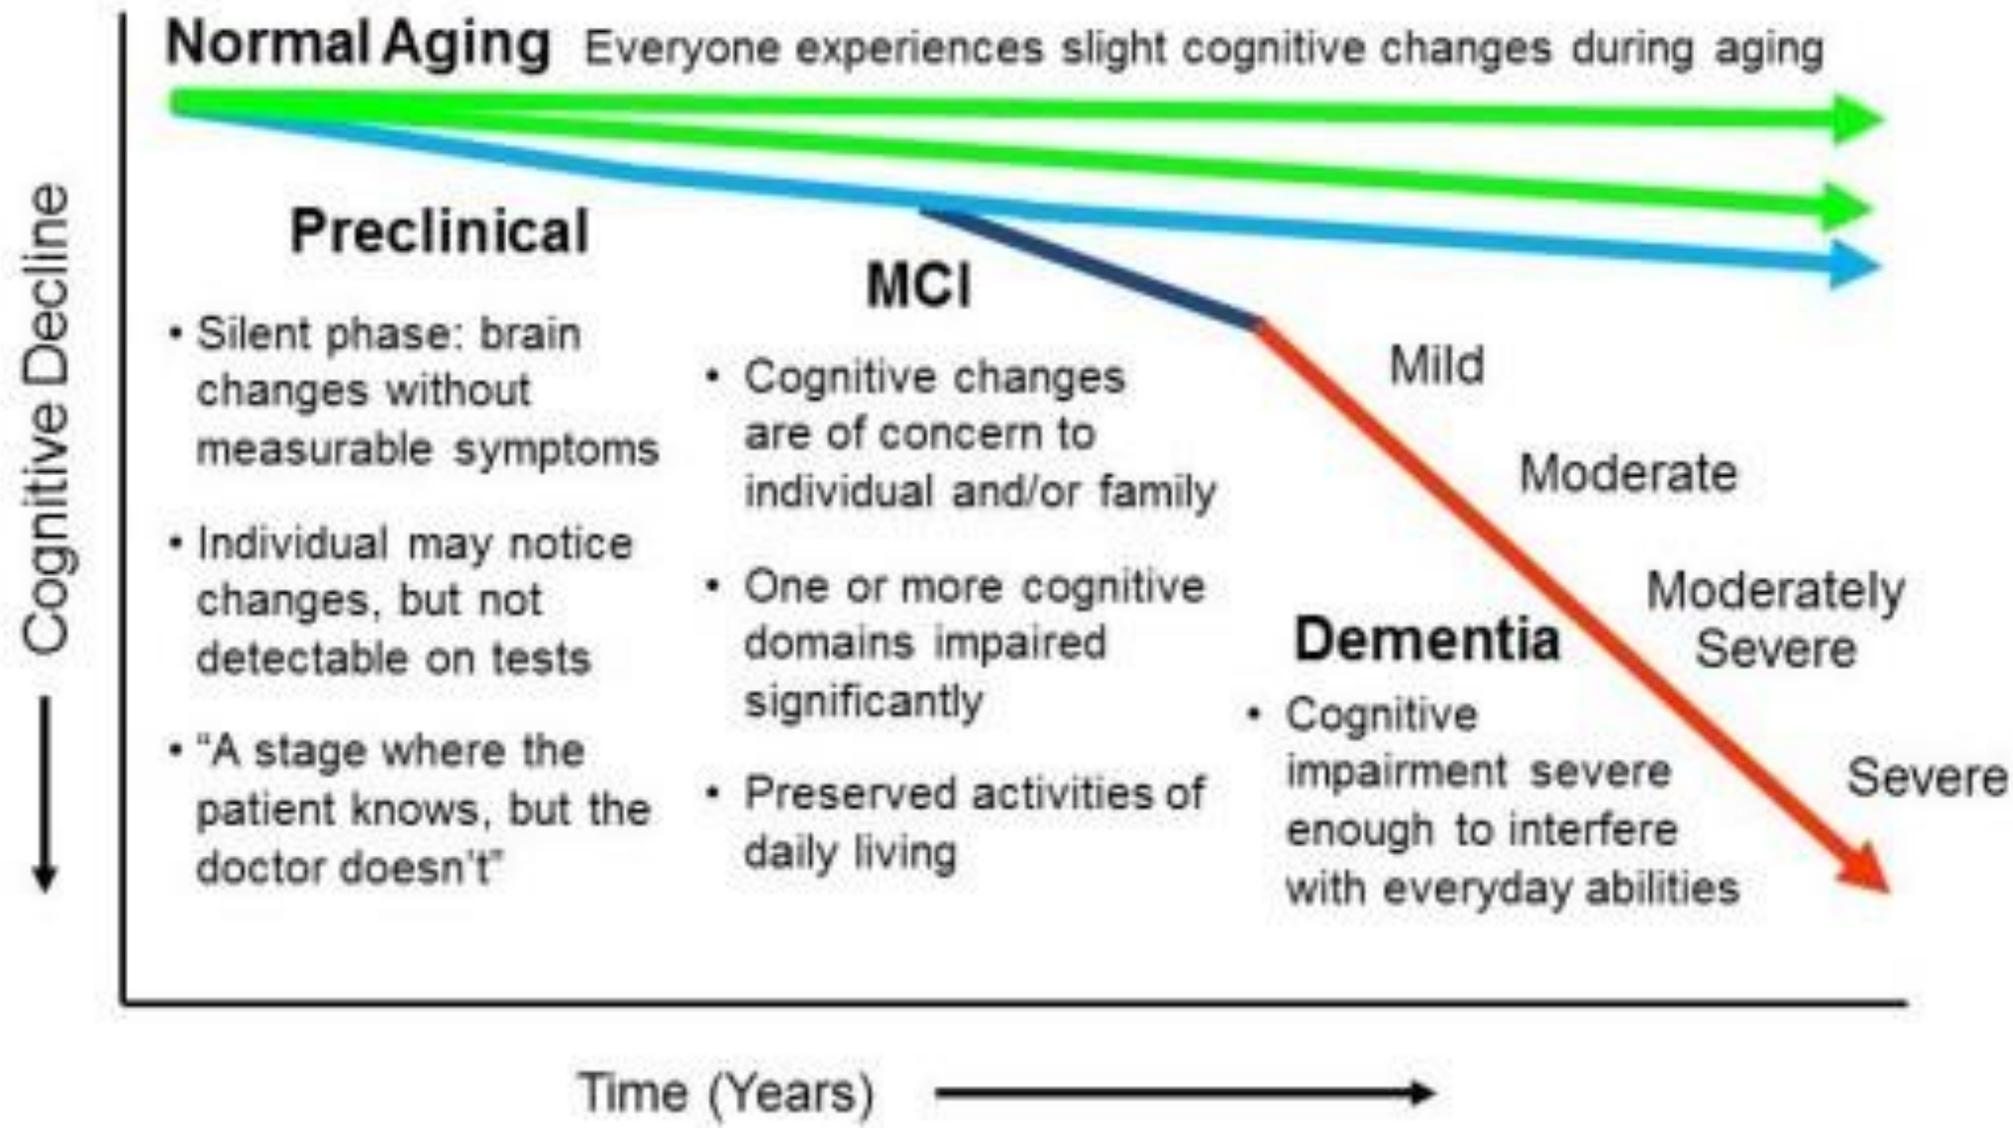

- ✓ Bathing
- ✓ Toileting
- ✓ Getting dressed
- ✓ Walking
- ✓ Eating meals
- ✓ Personal hygiene

Instrumental activities of daily living (IADLs)

- ✓ Doing laundry
- ✓ Paying bills
- ✓ Preparing meals
- ✓ Shopping for groceries
- ✓ Managing chores and cleaning

- Memory concerns or other cognitive changes (from patient or family)
- Medications errors/adherence
- Mood or personality changes
- Social withdrawal
- Poor chronic disease control (eg, missed insulin doses, missed anti-hypertensives)
- Gait abnormalities or frequent falls
- Difficulty with IADLs or BADLs

Tool	Time	Score Range	Notes
Mini-Cog	~3 min	0–5	Fast, good sensitivity, less comprehensive
MoCA	10–15 min	0–30	Best for mild impairment
MMSE	~7 min	0–30	Less sensitive for MCI

Assessment:

1. 3-word recall
2. Clock-drawing test
3. Recall the 3 words

Scoring:

- 1 point for each recalled word
- 2 points if clock is normal
- <3 suggests cognitive impairment

Mini-Cog®

Instructions for Administration & Scoring

ID: _____ Date: _____

Clock Drawing

ID: _____ Date: _____

Step 1: Three Word Registration

Look directly at person and say, "Please listen carefully. I am going to say three words that I want you to repeat back to me now and try to remember. The words are [select a list of words from the versions below]. Please say them for me now." If the person is unable to repeat the words after three attempts, move on to Step 2 (clock drawing).

The following and other word lists have been used in one or more clinical studies.^{1,3} For repeated administrations, use of an alternative word list is recommended.

Version 1 Banana Sunrise Chair	Version 2 Leader Season Table	Version 3 Village Kitchen Baby	Version 4 River Nation Finger	Version 5 Captain Garden Picture	Version 6 Daughter Heaven Mountain
---	--	---	--	---	---

Step 2: Clock Drawing

Say, "Next, I want you to draw a clock for me. First, put in all of the numbers where they go." When that is completed, say, "Now, set the hands to 10 past 11."

Use preprinted circle (see next page) for this exercise. Repeat instructions as needed as this is not a memory test. Move to Step 3 if the clock is not complete within three minutes.

Step 3: Three Word Recall

Ask the person to recall the three words you stated in Step 1. Say, "What were the three words I asked you to remember?" Record the word list version number and the person's answers below.

Word List Version: _____ Person's Answers: _____

Scoring

Word Recall: _____ (0-3 points)	1 point for each word spontaneously recalled without cueing.
Clock Draw: _____ (0 or 2 points)	Normal clock = 2 points. A normal clock has all numbers placed in the correct sequence and approximately correct position (e.g., 12, 3, 6 and 9 are in anchor positions) with no missing or duplicate numbers. Hands are pointing to the 11 and 2 (11:10). Hand length is not scored. Inability or refusal to draw a clock (abnormal) = 0 points.
Total Score: _____ (0-5 points)	Total score = Word Recall score + Clock Draw score. A cut point of <3 on the Mini-Cog™ has been validated for dementia screening, but many individuals with clinically meaningful cognitive impairment will score higher. When greater sensitivity is desired, a cut point of <4 is recommended as it may indicate a need for further evaluation of cognitive status.

Montreal Cognitive Assessment (MoCA)

- Evaluates multiple cognitive domains, including attention, executive function, memory, language, visuospatial skills, abstraction, calculation, and orientation
- Original validation studies: **Score <26/30 is abnormal**
- More recent validation studies: **Scores <24/30 maximize sensitivity and specificity for detecting MCI**

Mini Mental Status Exam (MMSE)

- Evaluates orientation, registration, attention and calculation, recall, and language
- Age and level of education have been found to influence MMSE scores by ~12%

MINI MENTAL STATE EXAMINATION (MMSE)

Name: _____
 DOB: _____
 Hospital Number: _____

One point for each answer	DATE:		
ORIENTATION Year Season Month Date Time Country Province City Barangay Street/ 5/ 5/ 5
REGISTRATION Examiner names three objects (e.g. apple, table, penny) and asks the patient to repeat (1 point for each correct. THEN the patient learns the 3 names repeating until correct)./ 3/ 3/ 3
ATTENTION AND CALCULATION Subtract 7 from 100, then repeat from result. Continue five times: 100, 93, 86, 79, 65. (Alternative: spell "WORLD" backwards: DLROW)./ 5/ 5/ 5
RECALL Ask for the names of the three objects learned earlier./ 3/ 3/ 3
LANGUAGE Name two objects (e.g. pen, watch). Repeat "No ifs, ands, or buts". Give a three-stage command. Score 1 for each stage. (e.g. "Place index finger of right hand on your nose and then on your left ear"). Ask the patient to read and obey a written command on a piece of paper. The written instruction is: "Close your eyes". Ask the patient to write a sentence. Score 1 if it is sensible and has a subject and a verb./ 2/ 1/ 3/ 1/ 1/ 2/ 1/ 3/ 1/ 1/ 2/ 1/ 3/ 1/ 1
COPYING: Ask the patient to copy a pair of intersecting pentagons/ 1/ 1/ 1
TOTAL:/ 30/ 30/ 30

MMSE scoring
 24-30: no cognitive impairment
 18-23: mild cognitive impairment
 0-17: severe cognitive impairment

Score	Degree of Impairment	Formal Psychometric Assessment	Day-to-Day Functioning
25-30	Questionably significant	If clinical signs of cognitive impairment are present, formal assessment of cognition may be valuable.	May have clinically significant but mild deficits. Likely to affect only most demanding activities of daily living.
20-25	Mild	Formal assessment may be helpful to better determine pattern and extent of deficits.	Significant effect. May require some supervision, support and assistance.
10-20	Moderate	Formal assessment may be helpful if there are specific clinical indications.	Clear impairment. May require 24-hour supervision.
0-10	Severe	Patient not likely to be testable.	Marked impairment. Likely to require 24-hour supervision and assistance with ADL.

Rowland Universal Dementia Assessment Scale (RUDAS) & Geriatric Depression Scale (GDS)

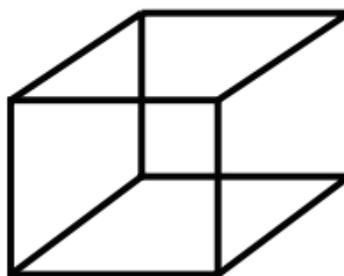

R U D A S

The Rowland Universal Dementia Assessment Scale: A Multicultural Cognitive Assessment Scale. (Storey, Rowland, Basic, Conforti & Dickson, 2004). International Psychogeriatrics, 16 (1), 13-31

Date: ___/___/___ Patient Name: _____

Item	Max Score
<p>Memory</p> <p>1. (Instructions) I want you to imagine that we are going shopping. Here is a list of grocery items. I would like you to remember the following items which we need to get from the shop. When we get to the shop in about 5 mins. time I will ask you what it is that we have to buy. You must remember the list for me. Tea, Cooking Oil, Eggs, Soap Please repeat this list for me (ask person to repeat the list 3 times). (If person did not repeat all four words, repeat the list until the person has learned them and can repeat them, or, up to a maximum of five times.)</p> <p>Visuospatial Orientation</p> <p>2. I am going to ask you to identify/show me different parts of the body. (Correct = 1). Once the person correctly answers 5 parts of this question, do not continue as the maximum score is 5.</p> <p>(1) show me your right foot1 (2) show me your left hand1 (3) with your right hand touch your left shoulder1 (4) with your left hand touch your right ear1 (5) which is (indicate/point to) my left knee1 (6) which is (indicate/point to) my right elbow1 (7) with your right hand indicate/point to my left eye1 (8) with your left hand indicate/point to my left foot1</p> <p>...../5</p> <p>Praxis</p> <p>3. I am going to show you an action/exercise with my hands. I want you to watch me and copy what I do. Copy me when I do this ... (One hand in fist, the other palm down on table - alternate simultaneously.) Now do it with me: Now I would like you to keep doing this action at this pace until I tell you to stop - approximately 10 seconds. (Demonstrate at moderate walking pace).</p> <p>Score as: Normal = 2 (very few if any errors; self-corrected, progressively better; good maintenance; only very slight lack of synchrony between hands) Partially Adequate = 1 (noticeable errors with some attempt to self-correct; some attempt at maintenance; poor synchrony) Failed = 0 (cannot do the task; no maintenance; no attempt whatsoever)</p> <p>...../2</p> <p>Visuoconstructional Drawing</p> <p>4. Please draw this picture exactly as it looks to you (Show cube on back of page). (Yes = 1)</p> <p>Score as: (1) Has person drawn a picture based on a square?1 (2) Do all internal lines appear in person's drawing?1</p> <p></p> <p>(3) Do all external lines appear in person's drawing?1</p> <p></p> <p>...../3</p> <p>Judgment</p> <p>5. You are standing on the side of a busy street. There is no pedestrian crossing and no traffic lights. Tell me what you would do to get across to the other side of the road safely. (If person gives incomplete response that does not address both parts of answer, use prompt: "Is there anything else you would do?") Record exactly what patient says and circle all parts of response which were prompted.</p> <p>.....</p> <p>Score as: Did person indicate that they would look for traffic? (YES = 2; YES PROMPTED = 1; NO = 0)2 Did person make any additional safety proposals? (YES = 2; YES PROMPTED = 1; NO = 0)2</p> <p>...../4</p>	

<p>Memory Recall</p> <p>1. (Recall) We have just arrived at the shop. Can you remember the list of groceries we need to buy? (Prompt: If person cannot recall any of the list, say "The first one was 'tea'." (Score 2 points each for any item recalled which was not prompted - use only 'tea' as a prompt.)</p> <p style="text-align: right;">Tea Cooking Oil Eggs Soap</p> <p>Language</p> <p>6. I am going to time you for one minute. In that one minute, I would like you to tell me the names of as many different animals as you can. We'll see how many different animals you can name in one minute. (Repeat instructions if necessary). Maximum score for this item is 8. If person names 8 new animals in less than one minute there is no need to continue.</p> <p>1. 5. 2. 6. 3. 7. 4. 8.</p> <p>TOTAL SCORE =</p>

Geriatric Depression Scale (short form)

Instructions: Circle the answer that best describes how you felt over the past week.

- | | | |
|---|-----|----|
| 1. Are you basically satisfied with your life? | yes | no |
| 2. Have you dropped many of your activities and interests? | yes | no |
| 3. Do you feel that your life is empty? | yes | no |
| 4. Do you often get bored? | yes | no |
| 5. Are you in good spirits most of the time? | yes | no |
| 6. Are you afraid that something bad is going to happen to you? | yes | no |
| 7. Do you feel happy most of the time? | yes | no |
| 8. Do you often feel helpless? | yes | no |
| 9. Do you prefer to stay at home, rather than going out and doing things? | yes | no |
| 10. Do you feel that you have more problems with memory than most? | yes | no |
| 11. Do you think it is wonderful to be alive now? | yes | no |
| 12. Do you feel worthless the way you are now? | yes | no |
| 13. Do you feel full of energy? | yes | no |
| 14. Do you feel that your situation is hopeless? | yes | no |
| 15. Do you think that most people are better off than you are? | yes | no |

Total Score _____

- Initial steps:
 - Full history + family input
 - Review meds: anticholinergics, sedatives, opioids
 - Cognitive screening
- Labs:
 - CBC, CMP, TSH, B12
 - Consider folate (+/- homocysteine), RPR, HIV, ESR/CRP
- Imaging:
 - MRI brain > CT head
 - If focal neurologic signs, gait disturbance, recent trauma, rapid decline
 - PET scan

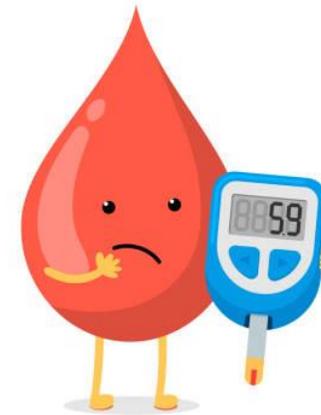

- **Normal aging** → Mild decline in episodic and working memory, ADLs usually preserved
- **Pseudodementia** → Associated with major depressive disorder (MDD), cognitive deficits usually AFTER mood symptoms, cognition usually improves after MDD treatment
- **Alzheimer disease (AD)** → Slowly progressive (over 8-10 years), characteristic order of language impairment (naming, comprehension, fluency)
- **Vascular dementia (VD)** → May present with abrupt cognitive decline and stepwise deterioration
- **Dementia with Lewy bodies (DLB)** → Visual hallucination and parkinsonian motor disorders
- **Frontotemporal dementia (FTD)** → Usually between ages 40-70, early changes in personality, apathy
- **Parkinson** → Cognitive impairment develops in advanced disease, bradykinesia, resting tremor, rigidity
- Others: Normal pressure hydrocephalus, Wernicke encephalopathy, Creutzfeldt-Jakob disease

- Refer to **Neurology, Geriatrics, or Neuro Memory** if:
 - Onset <65 years old
 - Rapid decline or atypical presentation
 - Severe behavioral disturbances
 - Unclear diagnosis despite workup
- Refer to **Neuropsychology** if:
 - High functioning patient with subtle symptoms
 - Legal/financial capacity questions (eg, for independent living, driving, or decision-making concerns)

Table 2. Atypical Early Features of Alzheimer's Disease and Other Diagnostic Considerations.

Feature	Diagnostic Consideration
Abrupt onset	Vascular dementia
Stepwise deterioration	Vascular dementia
Prominent behavioral changes	Frontotemporal dementia
Profound apathy	Frontotemporal dementia
Prominent aphasia	Frontotemporal dementia Vascular dementia
Progressive gait disorder	Vascular dementia Hydrocephalus
Prominent fluctuations in level of consciousness or cognitive abilities	Delirium due to infection, medications, or other causes Dementia with Lewy bodies Seizures
Hallucinations or delusions	Delirium due to infection, medications, or other causes Dementia with Lewy bodies
Extrapyramidal signs or gait	Parkinsonian syndromes Vascular dementia
Eye-movement abnormalities	Progressive supranuclear palsy Wernicke's encephalopathy

- Treat modifiable contributors:
 - Depression, sleep apnea, uncontrolled DM, physical inactivity
- Discuss medications:
 - Donepezil → Cholinesterase inhibitor
 - Memantine → NMDA-receptor antagonist, approved for moderate to severe AD
 - SSRIs, anti-psychotics, etc.
- Follow up every 6-12 months
- Refer for caregiver support and community resources

- Be honest but compassionate
- Use language like: “You’re right to be concerned. These symptoms may suggest early cognitive changes.”
- Discuss what a diagnosis does:
 - Unlocks resources
 - Helps with safety and financial planning
 - Allows shared-decision making
- Include the family in next steps
- Normalize grief, fear, frustration
- Provide strategies for caregiver burnout and provide referrals for assistance (eg, social work, home health, adult day care)

- Early cognitive screening fits into primary care practice
- Mini-Cog and MoCA = Your best tools
- Know when to dig deeper or refer
- Engage the family early if cognitive concerns
- Plan for safety, not just diagnosis
